PRACTICAL
CHEMISTRY. PART I.
PRELIMINARY. To make a Washing Bottle.--
Take a clean widemouth bottle, holding about a pint,

and fit a good sound cork tightly into the neck. Then take a piece of stout glass tubing (about inch external diameter) and, with the aid of a cork borer, bore two holes through the cork, parallel to each other and of such a size that the tube will pass through with some friction. If you have not a cork borer of the exact size required, take one a little smaller and then enlarge the hole by means of a round file. Cut off a piece of the tube of about twice the height of the bottle. Draw off one end to a point in the blowpipe flame. Cut it off with a file and make the orifice smooth by holding it in the flame for a minute or two, taking care not to close it completely. Then, in a common

fish-tail gas flame, bend the tube so as to form an angle of about 60° at such a distance from the wide end that when the tube is passed through the cork it will reach well to the bottom of the bottle. Into the second hole in the cork another piece of the same tubing is fitted, but this is cut off just below the cork, and is bent to form an angle of about 120°. The open end, projecting upwards, should be made smooth at the edge, by holding it for a few minutes in quantities of water into test tubes and for general purposes as a store of water. It is used by blowing gently into the upturned end of the mouthpiece, and so producing a pressure upon the surface of the water in

the bottle. To fix a Platinum Wire into a Glass Holder.-- Take six inches of narrow glass tubing, and by holding it in the Bunsen flame soften it so that it may be drawn out in the middle. When cold, scratch it at the middle with a file and break it...

Chemistry: Inorganic Qualitative Analysis in the Laboratory

Forgotten Books

This manual for practical qualitative analysis covers the use of spectroscopic methods for identification of various functional groups,

Comprehensive tables giving methods for the systematic identification of pure specimens, separation of mixtures and compounds, and procedures for preparation of derivatives are some of the salient features of the book.

Elementary Practical Chemistry and Qualitative Analysis

Forgotten Books

Excerpt from Qualitative Chemical Analysis: A Guide in the Practical Study of Chemistry and in the Work To aid the student in gaining an accurate acquaintance with the facts whereby analyses are made, and a clear understanding of the co-ordination of these facts - the principles of analysis - has been the chief object in this

work. It is the result of experience in the constant endeavor to prevent habits of automatic operation and of superficial observation in analysis. Farther, it is desired that the book may be found convenient and reliable for reference by chemists, pharmacists, and others, who occasionally or habitually perform analyses. The organic bases and acids, with a few exceptions, have been omitted from consideration. This is not done from neglect, but from a conviction of their too great importance for the subordinate and cursory attention which can be given to them in works devoted mainly to inorganic analysis. To the faithful workers who have

wrought out the great science of Chemistry, the writers humbly acknowledge their indebtedness for whatever of truth or value this little manual may contain. This inexpensive qualitative analysis supplement offers maximum flexibility and can accompany general chemistry texts. Works well with any general chemistry text, where the instructor wants more qualitative analysis in conjunction with regular class work.

A laboratory text book of practical chemistry; or, Introduction to qualitative analysis

Nabu Press

Excerpt from Exercises in Practical Chemistry: Series I, Qualitative Exercises In Part I, Sect. V, which gives directions for the performance of experiments upon salts of the principal metallic and non-metallic radicles, the operations are described in less detail, both because they are simpler and more uniform in character, and because something may fairly

be left to the experience the student has gained. In this section the experiments described are chiefly such as find some application in the course of qualitative analysis which follows. The division into exercises is not continued, since the experiments with each radicle form a separate group, and one or more of these can be performed at the same time, as may be found convenient. Part II gives the course to be followed in the analysis of a single salt, for the outline of which the authors are mainly indebted to Fresenius' Qualitative Analysis.'
