This book is intended as both an
introduction to the discipline for students
of landscape architecture, architecture,
and planning, and a source of continuing
interest for more experienced

environmental designers. The book offers various materials for landscape architects and other planning professionals. The book is divided into 4 parts and 17 chapters. Part I "Introduction to the Landscape Architecture Theme" is general reading on landscape architecture. Part II "Art's Replica and Landscape Architecture Model" includes three chapters. This part represents a theoretical and sensitive visual interpretation of landscape architecture. Part III "Sustainable Prototypes of a Contemporary Landscape Architecture" includes four chapters, with sustainability as a concept and guiding thought. Part IV "Landscape Architecture Around the World (Study Cases)" includes 9 chapters with many examples from different

geographical practical cases.

Cyber Warfare and Terrorism: Concepts, Methodologies, Tools, and Applications Springer

This textbook covers the fundamentals of fouling and scaling in reverse osmosis systems. It includes theory and practice of pre-treatment, fouling and scaling in reverse osmosis applied for drinking and industrial water production. The impact of the water source – seawater, river water, brackish groundwater and (treated domestic) waste water – will be discussed in depth. The book presents the knowledge and experience gained at IHE Delft over the last 25 years during the implementation of the master programme in Water Supply Engineering and during the implementation of state-of-the-art research in understanding and

solving operational problems in full scale desalination plants. It presents the expert knowledge of IHE Delft in the areas of pre-treatment for reverse osmosis systems, assessment of water quality with respect to fouling potential, development of methods for quality assessment, modified fouling index ultrafiltration at constant flux, transparent exopolymer particles, antiscalant dose optimization, biological growth potential), algal blooms, scaling control. The book will be used in the annual master programme at IHE Delft and it will be of interest for students, academics, engineers and managers in drinking water facilities all over the world.

Strawberry CRC Press

As the largest generation in U.S. history -

the population born in the two decades immediately following World War II - enters the age of risk for cognitive impairment, growing numbers of people will experience dementia (including Alzheimer's disease and related dementias). By one estimate, nearly 14 million people in the United States will be living with dementia by 2060. Like other hardships, the experience of living with dementia can bring unexpected moments of intimacy, growth, and compassion, but these diseases also affect people's capacity to work and carry out other activities and alter their relationships with loved ones, friends, and coworkers. Those who live with and care for individuals experiencing these diseases face challenges that include physical and emotional stress, difficult

changes and losses in their relationships with life partners, loss of income, and interrupted connections to other activities and friends. From a societal perspective, these diseases place substantial demands on communities and on the institutions and government entities that support people living with dementia and their families, including the health care system, the providers of direct care, and others. Nevertheless, research in the social and behavioral sciences points to possibilities for preventing or slowing the development of dementia and for substantially reducing its social and economic impacts. At the request of the National Institute on Aging of the U.S. Department of Health and Human Services, Reducing the Impact of

Dementia in America assesses the contributions of research in the social and behavioral sciences and identifies a research agenda for the coming decade. This report offers a blueprint for the next decade of behavioral and social science research to reduce the negative impact of dementia for America's diverse population. Reducing the Impact of Dementia in America calls for research that addresses the causes and solutions for disparities in both developing dementia and receiving adequate treatment and support. It calls for research that sets goals meaningful not just for scientists but for people living with dementia and those who support them as well. By 2030, an estimated 8.5 million Americans will have Alzheimer's disease and many more will have other

forms of dementia. Through identifying priorities social and behavioral science research and recommending ways in which they can be pursued in a coordinated fashion, Reducing the Impact of Dementia in America will help produce research that improves the lives of all those affected by dementia.

IEEE Membership Directory IGI Global
This two-volume book on biomass is a reflection of the increase in biomass related research and applications, driven by overall higher interest in sustainable energy and food sources, by increased awareness of potentials and pitfalls of using biomass for energy, by the concerns for food supply and by multitude of potential biomass uses as a source material in organic chemistry, bringing in the concept of bio-refinery. It

reflects the trend in broadening of biomass related research and an increased focus on second-generation bio-fuels. Its total of 40 chapters spans over diverse areas of biomass research, grouped into 9 themes.

The Report of the Constitution Project's Task Force on Detainee Treatment, Abridged Edition Academic Press

This well-respected text gives an introduction to the theory and application of modern numerical approximation techniques for students taking a one- or two-semester course in numerical analysis. With an accessible treatment that only requires a calculus prerequisite, Burden and Faires explain how, why, and when approximation techniques can be expected to work, and why, in some situations, they fail. A

wealth of examples and exercises develop students' intuition, and demonstrate the subject's practical applications to important everyday problems in math, computing, engineering, and physical science disciplines. The first book of its kind built from the ground up to serve a diverse undergraduate audience, three decades later Burden and Faires remains the definitive introduction to a vital and practical subject. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

CPM Scheduling for Construction

Springer Science & Business Media
Development of advanced technologies is a critical component in overcoming

the looming water crisis. Stressing emerging technologies and strategies that facilitate water sustainability for future generations, the second volume in the two-volume set Sustainable Water Management and Technologies provides current and forthcoming technologies research, development, and applications to help ensure availability of water for all. The book emphasizes emerging nanotechnology, biotechnology, and information technology applications as well as sustainable processes and products to protect the environment and human health, save water and energy, and minimize material use. It also discusses such topics as groundwater transport, protection, and remediation, industrial and wastewater treatment, reuse, and disposal, membrane

technology for water purification and desalination, treatment and disposal in unconventional oil and gas development, biodegradation, and bioremediation for soil and water. Stresses emerging technologies and strategies that facilitate water sustainability. Covers a wide array of topics including drinking water, wastewater, and groundwater treatment, protection, and remediation. Discusses oil and gas drilling impacts and pollution prevention, membrane technology for water desalination and purification, biodegradation, and bioremediation for soil and water. Details emerging nanotechnology, biotechnology, and information technology applications, as well as sustainable processes and products.

"This multi-volume reference examines critical issues and emerging trends in global business, with topics ranging from managing new information technology in global business operations to ethics and communication strategies"--Provided by publisher.

Arab World Almanac Springer Nature
At a time when society is demanding accountability from the medical

education system and residency review committees are demanding written curricula, this book offers a practical, yet theoretically sound, approach to curriculum development in medicine. Short, practical, and generic in its approach, the book begins with an overview of a six-step approach to curriculum development. Each succeeding chapter then covers one of the six steps: problem identification, targeted needs assessment, goals and objectives, education methods, implementation, and evaluation. Additional chapters address curriculum maintenance, enhancement, and dissemination. Throughout, examples are used to illustrate major points. An appendix provides the reader with a selected list of published and

unpublished resources on funding, faculty development, and already developed curricula.

A Six Step Approach CABI

Biophilic and Bioclimatic Architecture is a guide to innovative architectural design for architects, engineers and other specialists who are working with biophilic and bioclimatic architectural concepts. Biophilic and Bioclimatic Architecture has three parts: • Part I focuses on the relationship between architecture and human needs and the creation process, demonstrating the meaning of architectural value in architectural hypothesis. • Part II opens the way towards a new understanding of biophilic architecture as a response to the negative actions of humans and the negative effects of using natural

resources. • Part III shows the benefits of combining the effects of the climate with the notion of human comfort in bioclimatic architecture.

The Sense of Places, Models and Applications JHU Press

While the world's population continues to grow, the availability of water remains constant. Facing the looming water crisis, society needs to tackle strategic management issues as an integrated part of the solution toward water sustainability. The first volume in the two-volume set *Sustainable Water Management and Technologies* offers readers a practical and comprehensive look at such key water management topics as water resource planning and governance, water infrastructure planning and adaption, proper

regulations, and water scarcity and inequality. It discusses best management practices for water resource allocation, ground water protection, and water quality assurance, especially for rural, arid, and underdeveloped regions of the world. Timely topics such as drought, ecosystem sustainability, climate change, and water management for shale oil and gas development are presented. Discusses best practices for water resource allocation, ground water protection, and water quality assurance. Offers chapters on urban, rural, arid, and underdeveloped regions of the world. Describes timely topics such as drought, ecosystem sustainability, climate change, and water management for shale oil and gas development. Covers

water resource planning and governance, water infrastructure planning and adaptation, proper regulations, and water scarcity and inequality. Discusses water resource monitoring, efficiency, and quality management.

Molecular Epidemiology IGI Global
As teaching strategies continue to change and evolve, and technology use in classrooms continues to increase, it is imperative that their impact on student learning is monitored and assessed. New practices are being developed to enhance students' participation, especially in their own assessment, be it through peer-review, reflective assessment, the introduction of new technologies, or other novel solutions. Educators must remain up-to-date on

the latest methods of evaluation and performance measurement techniques to ensure that their students excel. *Learning and Performance Assessment: Concepts, Methodologies, Tools, and Applications* is a vital reference source that examines emerging perspectives on the theoretical and practical aspects of learning and performance-based assessment techniques and applications within educational settings. Highlighting a range of topics such as learning outcomes, assessment design, and peer assessment, this multi-volume book is ideally designed for educators, administrative officials, principals, deans, instructional designers, school boards, academicians, researchers, and education students seeking coverage on an educator's role in evaluation design

and analyses of evaluation methods and outcomes.

Assessment & Pre-treatment of Fouling and Scaling IGI Global

The Sourcebook on the Foundations of Social Protection Delivery Systems synthesizes real-world experiences and lessons learned of social protection delivery systems from around the globe. It takes a broad view of social protection, covering various intended populations such as poor or low-income families, unemployed workers, persons with disabilities, and individuals facing social risks. It discusses many types of interventions that governments provide to individuals, families, or households, including categorical programs, poverty-targeted programs, labor benefits and services, disability benefits and services,

and social services. The Sourcebook seeks to address concrete “how-to?” questions, including:

- How do countries deliver social protection benefits and services?
- How do they do so effectively and efficiently?
- How do they ensure dynamic inclusion, especially for the most vulnerable and needy?
- How do they promote better coordination and integration—not only among social protection programs but also among programs in other parts of government?
- How can they meet the needs of their intended populations and provide a better client experience?

The delivery systems framework elaborates on the key elements of that operating environment. The framework is anchored in core implementation phases along the delivery chain. Key actors, including

people and institutions, interact all along that delivery chain. Those interactions are facilitated by communications, information systems, and technology. This framework can apply to the delivery of one or many programs and to the delivery of adaptive social protection. The Sourcebook structures itself around eight key principles that can frame the delivery systems mind-set: 1. There is no single blueprint for delivery systems, but there are commonalities, and those common elements constitute the core of the delivery systems framework. 2. Quality of implementation matters, and weaknesses in any of the core elements will negatively affect the entire system, reducing the impacts of the program(s) they support. 3. Delivery systems evolve over time, in a nonlinear fashion, and

their starting points matter. 4. Efforts should be made to “keep it simple” and to “do simple well,” from the start. 5. The “first mile”—people’s direct interface with administrative functions—is often the weakest link in the delivery chain; improving it may take systemic change but will greatly improve overall efficiencies and mitigate the risk of failures on the frontlines. 6. Social protection programs do not operate in a vacuum, and thus their delivery systems should not be developed in silos; synergies across institutions and information systems are possible and can improve program outcomes. 7. Social protection delivery systems can contribute more broadly to government’s ability to serve other sectors, such as health insurance subsidies, scholarships,

social energy tariffs, housing benefits, and legal services. 8. The dual challenges of inclusion and coordination are pervasive and perennial and encourage the continuous improvement of delivery systems, through a dynamic, integrated, and human-centered approach.

Cultivation and Utilization CRC Press
This book will serve as a primer for both laboratory and field scientists who are shaping the emerging field of molecular epidemiology. Molecular epidemiology utilizes the same paradigm as traditional epidemiology but uses biological markers to identify exposure, disease or susceptibility. Schulte and Perera present the epidemiologic methods pertinent to biological markers. The book is also designed to enumerate the

considerations necessary for valid field research and provide a resource on the salient and subtle features of biological indicators.

Concepts, Methodologies, Tools, and Applications Project Management Institute

This volume offers a detailed and comprehensive analysis of Endocrine Disrupting Chemicals (EDCs), covering their occurrence, exposure to humans and the mechanisms that lead to the pathogenesis of EDCs-induced metabolic disorders. The book is divided into three parts. Part I describes the physiology of the human endocrine system, with special emphasis on various types of metabolic disorders along with risk factors that are responsible for the development of these

disorders. Part II addresses all aspects of EDCs, including their role in the induction of various risk factors that are responsible for the development of metabolic disorders. Part III covers up-to-date environmental regulatory considerations and treatment strategies that have been adopted to cure and prevent EDCs-induced metabolic disorders. This section will primarily appeal to clinicians investigating the causes and treatment of metabolic disorders. The text will also be of interest to students and researchers in the fields of Environmental Pharmacology and Toxicology, Environmental Pollution, Pharmaceutical Biochemistry, Biotechnology, and Drug Metabolism/Pharmacokinetics.

Outreach Program BoD – Books on

Demand

This volume aims to outline the fundamental principles behind leadership, innovation and entrepreneurship and show how the interrelations between them promote business and trade practices in the global economy. Derived from the 2016 International Conference on Leadership, Innovation, and Entrepreneurship (ICLIE), this volume showcases original papers presenting current research, discoveries and innovations across disciplines such as business, social sciences, engineering, health sciences and medicine. The pace of globalization is increasing at a rapid rate and is primarily driven by increasing volume of trade, accelerating pace of competition among nations, freer flows of capital and

increased level of cooperation among trading partners. Leadership, innovation, and entrepreneurship are key driving forces in enhancing this phenomenon and are among the major catalysts for contemporary businesses trading in the global economy. This conference and the enclosed papers provides a platform in which to disseminate and exchange ideas to promote a better understanding of current issues and solutions to challenges in the globalized economy in relation to the fields of entrepreneurship, business and economics, technology management, and Islamic finance and management. Thus, the theories, research, innovations, methods and practices presented in this book will be of use to researchers, practitioners, student and policy makers across the

globe.

Best Practices and Guidelines

Springer

Methods of strawberry cultivation have undergone extensive modification and this book provides an up-to-date, broad and balanced scientific review of current research and emerging challenges. Subjects covered range from plant propagation, architecture, genetic resources, breeding, abiotic stresses and climate change, to evolving diseases and their control. These topics are examined in three sections: 1. Genetics, Breeding and Omics - covering genetic resources, breeding, metabolomics, transcriptomics, and genetic transformation of strawberry. 2. Cultivation Systems and Propagation - discusses plant architecture, replanting

problems and plant propagation techniques. 3. Disease and Stress Management - deals with traditional and emerging fungal diseases, their diagnosis and modern biocontrol strategies, and biotechnological interventions for dealing with the challenges of climate change.

Strawberry: Growth, Development and Diseases is written by an international team of specialists, using figures and tables to make the subject comprehensible and informative. It is an essential resource for academics and industry workers involved in strawberry research and development, and all those interested in the commercial cultivation of strawberries.

Reducing the Impact of Dementia in America UNESCO

Through the rise of big data and the internet of things, terrorist organizations have been freed from geographic and logistical confines and now have more power than ever before to strike the average citizen directly at home. This, coupled with the inherently asymmetrical nature of cyberwarfare, which grants great advantage to the

attacker, has created an unprecedented national security risk that both governments and their citizens are woefully ill-prepared to face. Examining cyber warfare and terrorism through a critical and academic perspective can lead to a better understanding of its foundations and implications. *Cyber Warfare and Terrorism: Concepts, Methodologies, Tools, and Applications* is an essential reference for the latest research on the utilization of online tools by terrorist organizations to communicate with and recruit potential extremists and examines effective countermeasures employed by law enforcement agencies to defend against such threats. Highlighting a range of topics such as cyber threats, digital intelligence, and counterterrorism, this

multi-volume book is ideally designed for law enforcement, government officials, lawmakers, security analysts, IT specialists, software developers, intelligence and security practitioners, students, educators, and researchers. *Meeting the Challenge of Caring for Persons Living with Dementia and Their Care Partners and Caregivers* Cengage Learning

This book highlights the role that both infrastructure and governance play in the context of resilience and adaptation to climate variability and change. Eleven case studies analyze in-depth impacts of extreme events in projects, basins and regions in the Arid Americas (United States and Mexico), Australia, Brazil, China, Egypt, France, Nepal, Mexico, Pakistan, Turkey and South Africa. They

discuss the importance of infrastructure (mainly reservoirs) in adaptation strategies, how planning and management aspects should improve in response to changing climatic, economic, social and environmental situations and what the management, institutional and financial challenges would be for their implementation. Governance aspects (policies, institutions and decision making) and

technical and knowledge limitations are a substantial part of the analyses. The case studies argue that reservoirs are essential to build resilience contributing to adaptation to climate variability and change. However, that for them to be effective, they need to be planned and managed within a governance framework that considers long-term perspectives and multi-sector and multi-level actor needs and perspectives.
