A Green Critique Cambridge Scholars Publishing

It is generally agreed that about 7,000 languages are spoken across the world today and at least half may no longer be spoken by the end of this century. This state-of-the-art Handbook examines the reasons behind this dramatic loss of linguistic diversity, why it matters, and what can be done to document and support endangered languages. The volume is relevant not only to researchers in language endangerment, language shift and language death, but to anyone interested in the languages and cultures of the world. It is accessible both to specialists and non-specialists: researchers will find cutting-edge contributions from acknowledged experts in their fields, while students, activists and other interested readers will find a wealth of readable yet thorough and up-to-date information.

Global Perspectives on Eco-Aesthetics and Eco-Ethics: A Green Critique focuses on the interface of the Anthropocene, sustainability, ecological aesthetics, multispecies relationality, and the environment as reflected in literature and culture. This book examines how writers have addressed ecological crises and environmental challenges that transcend national, cultural, political, social, and linguistic borders. It demonstrates how, as the environmental humanities developed and emerged as a critical discipline, it generated a diverse range of interdisciplinary fields of study

such as ecographics, ecodesign, ecocinema, ecotheology, ecofeminism, ethnobotany, ecolinguistics, and bioregionalism, and formed valuable, interdisciplinary networks of critique and advocacy—and its contemporary expansion is exceptionally salient to social, political, and public issues today.

How do you gain knowledge? Is it from watching videos, reading books or articles from internet? Is it from your family, friends, teachers, professors? Is from your own feelings? There are many ways of collecting and obtaining knowledge and as human living in the era of 4.0 nowadays, myriad knowledge sources are viral in every place, in every time. However, how do you know the knowledge, how do you come into a conclusion after deepening your doubt and curiosity?

Ecological Perspectives Taylor & Francis

Today there is a bewildering diversity of views on ecology and the natural environment. With more than two hundred distinct and valuable perspectives on the natural world—and with scientists, economists, ethicists, activists, philosophers, and others often taking completely different stances on the issues—how can we come to agreement to solve our toughest environmental problems? In response to this pressing need, *Integral Ecology* unites valuable insights from multiple perspectives into a comprehensive theoretical framework—one that can be put to use right now. The framework is based on Integral Theory, as well as Ken Wilber's AQAL model, and is the result of over a decade of research exploring the myriad perspectives on ecology

available to us today and their respective methodologies. Dozens of real-life applications and examples of this framework currently in use are examined, including three in-depth case studies: work with marine fisheries in Hawai'i, strategies of eco-activists to protect Canada's Great Bear Rainforest, and a study of community development in El Salvador. In addition, eighteen personal practices of transformation are provided for you to increase your own integral ecological awareness. Integral Ecology provides the most sophisticated application and extension of Integral Theory available today, and as such it serves as a template for any truly integral effort.

Steps to an Educational Ecology

This book explores the linguistic ecology of the Kumaun region of Uttarakhand, India through the experiences and discourses of minority youth and their educators. Providing in-depth examples of Indian multilingualism, this volume analyses how each language is valued in its own context; how national-level policies are appropriated and contested in local discourses; and how language and culture influence educational opportunities and identity negotiation for Kumauni young women. In doing so, the author examines how students and educators navigate a multilingual society with similarly diverse classroom practices. She simultaneously critiques the language and education system in modern India and highlights alternative perspectives on empowerment through the lens of a unique Gandhian educational context. This volume allows Kumauni women and their educators to take centre stage, and provides a thoughtful and nuanced insight into their minority language environment. This

unique book is sure to appeal to students and scholars of multilingualism, sociolinguistics, language policy and minority languages.

Thirty years ago a new linguistic paradigm was created when Einar Haugen combined language with ecology. For Haugen, 'the ecology of language' meant the study of the interrelations between languages in the human mind and in the multilingual community. Since then a special branch of linguistics, named Ecolinguistics, has developed in which the connection between language and ecology has been established in a variety of ways and using a multitude of methods and approaches. In addition to the original ecolinguistic topics of language interrelation, language endangerment and language pressure, Ecolinguistics Reader also gives due consideration to the themes of biological and linguistic diversity as well as the ecocritical aspect.

For Haugen, 'the ecology of language' meant the study of the interrelations between languages in the human mind and in the multilingual community. Since then a special branch of linguistics, named ecolinguistics, has developed in which the connection between language and ecology has been established in a variety of ways and by using a multitude of methods and approaches. This reader contains important articles from all the different fields of ecolinguistics - a volume long overdue for a discipline now recognized as a significant contribution to variety within the subject.

This book introduces the notion of "educational ecology" as a necessary and promising pedagogic principle for the teaching of Anglophone literatures and cultures in a time of climate change. Drawing on scholarship in the environmental humanities and practice-oriented research in education and literature pedagogy, chapters address the challenges of climate change and the demand for sustainability and environmental pedagogy from the specific perspective of literary and cultural studies and education, arguing that these perspectives constitute a crucial element of the transdisciplinary effort of "cultivating sustainability." The

notion of an "educational ecology" takes full advantage of the necessarily dialogic and co-constitutive nature of sustainability-related pedagogical philosophy and practice while it retains the subject-specific focus of research and education in the humanities, centring on and excelling in critical thinking, perspective diversity, language and discourse awareness, and the literary and cultural constructions of meaning. This book will be of great interest to academics, researchers and post-graduate students in the fields of language, literature and culture pedagogy, as well as transdisciplinary researchers in the environmental humanities.

This book focuses on the role of higher education institutions in addressing climate change mitigation and adaptation challenges, contributing to the development of this fast-growing field. Further, it includes the results of empirical research and offers ideas regarding on-going and future research initiatives. The contributions also • showcase the research and projects on issues pertaining to climate change at universities from across the globe; • document and promote ideas and experiences acquired in the execution of research projects, especially successful initiatives and best practices; and • introduce methodological approaches and projects that offer a better understanding of climate change across society and economic sectors. The book is structured around two parts: lessons learned from climate change research, education, studies and projects. Each part focuses on mitigation and adaptation respectively, with many responses of the two modalities

overlapping. This book is a valuable resource for researchers and practitioners in the fields of environment, human geography, business and economics, as well as academics and students, as it presents education, communication and awareness-raising projects on matters related to climate change at universities in both industrialised and developing countries, often in cooperation with government bodies, NGOs and other stakeholders.

This unique volume utilizes the UNESCO Education for Sustainable Development (ESD) framework to illustrate successful integration of sustainability education in post-secondary foreign language (FL) learning. Showcasing a variety of approaches to using content-based instruction (CBI) in college-level courses, this text valuably demonstrates how topics relating to environmental, social, and cultural dimensions of sustainability

can be integrated in FL curricula. Chapters draw on case studies from colleges throughout the US and consider theoretical and practical concerns relating to models of sustainability-based teaching and learning. Chapters present examples of project-, problem-, and task-based approaches, as well as field work, debate, and reflective pedagogies to enhance students' awareness and engagement with sustainable development issues as they acquire a foreign language. Insights and recommendations apply across languages and highlight the potential contribution of FL learning to promote sustainability literacy amongst learners. This text will benefit researchers, academics, and educators in higher education with an interest in Modern Foreign Languages, sustainability education, training, and leadership more broadly.

The Handbook of Educational Linguistics Cambridge Scholars Publishing

Premised on the belief that a social and an ecological agenda are compatible, this collection offers readings in the ecology of left and radical writing from the Romantic period to the present. While early ecocriticism tended to elide the bitter divisions within and between societies, recent practitioners of ecofeminism, environmental justice, and social ecology have argued that the social, the economic and the environmental have to be seen as part of the same process. Taking up this challenge, the contributors trace the origins of an environmental sensibility and of the modern left to their roots in the late eighteenth and early nineteenth centuries, charting the ways in which the literary imagination responds to the political, industrial and agrarian revolutions. Topics include Samuel

Taylor Coleridge's credentials as a green writer, the interaction between John Ruskin's religious and political ideas and his changing view of nature, William Morris and the Garden City movement, H. G. Wells and the Fabians, the devastated landscapes in the poetry and fiction of the First World War, and the leftist pastoral poetry of the 1930s. In historicizing and connecting environmentally sensitive literature with socialist thought, these essays explore the interactive vision of nature and society in the work of writers ranging from William Wordsworth and John Clare to John Berger and John Burnside. *Global Perspectives on Eco-Aesthetics and Eco-Ethics* European Alliance for Innovation

In this book I try to give a coherent and consistent overview of what an ecological approach to language learning might look like. This is not a fully fledged grand theory that aims to provide an explanation of everything, but an attempt to provide a rationale for taking an ecological world view and applying it to language education, which I regard as one of the most important of all human activities. Goethe once said that everything has been thought of before, but that the difficulty is to think of it again. The same certainly is true of the present effort. If it has any innovative ideas to offer, these lie in a novel combination of thoughts and ideas that have been around for a long, long time. The reader will encounter influences that range from Spinoza to Bakhtin and from Vygotsky to Halliday. The scope of the work is intentionally broad, covering all major themes that are part of the language learning process and the language teaching profession. These themes include language, perception and action, self, learning, critical

pedagogy and research. At the same time I have attempted to look at both the macro and the micro sides of the ecological coin, and address issues from both a theoretical and a practical perspective. This, then, aims to be a book that can be read by practitioners and theoreticians alike, and the main idea is that it should be readable and challenging at the same time.

Ecology has become a central question governing the survival and sustainability of human societies, cultures and languages. In this timely study, Michael Cronin investigates how the perspective of the Anthropocene, or the effect of humans on the global environment, has profound implications for the way translation is considered in the past, present and future. Starting with a deep history of translation and ranging from food ecology to inter-species translation and green translation technology, this thought-provoking book offers a challenging and ultimately hopeful perspective on how translation can play a vital role in the future survival of the planet.

Language as a Local Practice addresses the questions of language, locality and practice as a way of moving forward in our understanding of how language operates as an integrated social and spatial activity. By taking each of these three elements – language, locality and

practice – and exploring how they relate to each other, Language as a Local Practice opens up new ways of thinking about language. It questions assumptions about languages as systems or as countable entities, and suggests instead that language emerges from the activities it performs. To look at language as a practice is to view language as an activity rather than a structure, as something we do rather than a system we draw on, as a material part of social and cultural life rather than an abstract entity. Language as a Local Practice draws on a variety of contexts of language use, from bank machines to postcards, Indian newspaper articles to fish-naming in the Philippines, urban graffiti to mission statements, suggesting that rather than thinking in terms of language use in context, we need to consider how language, space and place are related, how language creates the contexts where it is used, how languages are the products of socially located activities and how they are part of the action. Language as a Local Practice will be of interest to students on advanced undergraduate and post graduate courses in Applied Linguistics, Language Education, TESOL, Literacy and Cultural Studies.

Multimodality is a fast-growing interdisciplinary approach that aims to analyze the interplay of multiple modes such as gaze, gesture or spoken language that are utilized in interaction, and to examine the multimodal production and consumption of communicated messages. This Reader provides a comprehensive text of current research into multimodality, outlining in-depth delineation of each primary theoretical and methodological

approach, as well as personal accounts of scholars, who are responsible for the various approaches' advancements. The book additionally offers a plethora of analysis chapters, written by scholars from across the world, with vastly diverse themes ranging from buying popcorn, protests in Oman, coaching sessions and identity, to kitesurfing, typography, TV news, billboards, workplace practices, or analyzing web pages, Facebook, comic books, and more. Flexible and easy to use, the Reader includes key terms, suggested further readings, and a project idea for each chapter. The key terms for the chapters also comprise the extensive alphabetical glossary. Brief introductions for the analysis chapters, written by the editors, summarize the topic, explain the methodology used, outline the thematic orientation, and link each chapter to other chapters in the book. Showcasing multimodal analysis in detail, this Reader is essential reading for undergraduate and postgraduate students, for emergent researchers, and for advanced scholars who wish to gain insight into the current state of multimodal research.

This edited volume explores the scope of

interdisciplinary linguistics and includes voices from scholars in different disciplines within the social sciences and humanities, as well as different sub-disciplines within linguistics. Chapters within this volume offer a range of perspectives on interdisciplinary studies, represent a connection between different disciplines, or demonstrate an application of interdisciplinarity within linguistics. The volume is divided into three sections: perspectives, connections, and applications.

Perspectives The goal of this section is to address more generally the definition(s) of and value of multi-, trans-, and interdisciplinary work. In what areas and for what purposes is there a need for work that crosses discipline boundaries? What are the challenges of undertaking such work? What opportunities are available?

Connections This section features paired chapters written by scholars in different disciplines that discuss the same concept/idea/issue. For example, a discussion of how "assemblage" works in archaeology is paired with a discussion of how "assemblage" can be used to talk about 'style' in linguistics.

Applications This section can be framed as sample answers to the question: What does interdisciplinarity look like?
