bonds as nonpolar covalent, polar covalent, or ionic based on electronegativity

LAB 11 Molecular Geometry Objectives - University of Idaho

Molecular Geometry How can molecular shapes be predicted using the VSEPR theory? why? When you draw a Lewis structure for a molecule on paper, you are making a two-dimensional representation of the atoms. In reality however, molecules are not flat—they are three-dimensional. The true shape of a molecule is important because it determines many physical and chemical properties for the substance. Can shapes be predicted using the theory? why? - LTHS
