Architecture of Network Systems John Wiley & Sons

This book examines the extensive changes in markets, technologies and value chains that telecommunication companies are currently confronted with. It analyzes the crossroads they have reached and the choices that now need to be made - to be a bit pipe or a trendsetter of digitalization. Based on an analysis of the key challenges for telcos, the book derives future market scenarios and puts forward recommendations for how they can successfully position themselves. It proposes a framework based on seven "levers," which addresses concrete measures in each step of the value chain, ranging from technology, IT and processes, to innovation, marketing and sales issues. The book discusses the current challenges and provides both general recommendations and concrete solutions. Respected experts illustrate innovative strategic and technical trends and provide insights gained in real-life transformation projects. Recent developments in the areas of regulation, product development, competition between over-the-top (OTT) providers and telcos, as well as technical innovations like 5G, SDN/NFV, LEO satellites and MEC are discussed. Accordingly, practitioners, managers and researchers alike will benefit from the book's wealth of examples and up-to-date insights.

One of Time Magazine's Must-Read Books of 2019 An award-winning journalist shows how workplace diversity initiatives have turned into a profoundly misguided industry--and have done little to bring equality to America's major industries and institutions. Diversity has become the new buzzword, championed by elite institutions from academia to Hollywood to corporate America. In an effort to ensure their organizations represent the racial and ethnic makeup of the country, industry and foundation leaders have pledged hundreds of millions of dollars to commission studies, launch training sessions, and hire consultants and diversity czars. But is it working? In *Diversity, Inc.*, award-winning journalist Pamela Newkirk shines a bright light on the diversity industry, asking the tough questions about what has been effective--and why progress has been so slow. Newkirk highlights the rare success stories, sharing valuable lessons about how other industries can match those gains. But as she argues, despite decades of handwringing, costly initiatives, and uncomfortable conversations, organizations have, apart from a few exceptions, fallen far short of their goals. *Diversity, Inc.* incisively shows the vast gap between the rhetoric of inclusivity and real achievements. If we are to deliver on the promise of true equality, we need to abandon ineffective, costly measures and commit ourselves to combatting enduring racial attitudes

The rapid growth of digital technology and its spread into every facet of life are producing increasingly complex discovery issues in federal criminal cases. There are several advantages to electronically stored information (ESI, or e-discovery), including speed, efficiency, and quality of information. To ensure these benefits are realized, judges and lawyers working on federal criminal cases need guidance on how best to address e-discovery issues. Judges can play a vital oversight role to ensure that e-discovery moves smoothly, trial deadlines are met, and the parties and courts are able to review and identify critical evidence. This pocket guide was developed to help judges manage complex e-discovery in criminal cases. A note of appreciation goes to Judge Xavier Rodriguez (W.D. Tex.), and Magistrate Judges Laurel Beeler (N.D. Cal.) and Jonathan W. Feldman (W.D.N.Y.), for their suggestions and advice, as well as to our fellow members of the Joint Electronic Technology Working Group, who improved this publication.

Rural Call Completion (US Federal Communications Commission Regulation) (FCC) (2018 Edition) The Law Library presents the complete text of the Rural Call Completion (US Federal Communications Commission Regulation) (FCC) (2018 Edition). Updated as of May 29, 2018 In this document the Federal Communications Commission (Commission) improves its ability to

monitor problems with completing calls to rural areas, and enforce restrictions against blocking, choking, reducing, or restricting calls. The Report and Order applies the new rules to providers of long-distance voice service that make the initial long-distance call path choice for more than 100,000 domestic retail subscriber lines, counting the total of all business and residential fixed subscriber lines and mobile phones and aggregated over all of the providers' affiliates (referred to herein as "covered providers"). In most cases, this is the calling party's long-distance provider. Covered providers include LECs, interexchange carriers (IXCs), commercial mobile radio service (CMRS) providers, and VoIP service providers. These rules do not apply to intermediate providers. Covered providers must file quarterly reports and retain the call detail records for at least six calendar months. The Report and Order also allows qualifying providers to certify that they meet the conditions for a Safe Harbor that would reduce reporting and retention obligations. In addition, the Commission has delegated to the Wireline Competition Bureau, in consultation with the Enforcement Bureau, the authority to act on requests from qualified providers for waiver of these rules. The Report and Order also adopts a rule prohibiting all originating and intermediate providers from causing audible ringing to be sent to the caller before the terminating provider has signaled that the called party is being alerted.
