 Unless action is taken now to make agriculture more sustainable, productive and resilient, climate change impacts will seriously compromise food production in countries and regions that are already highly food-insecure. The Paris Agreement, adopted in December 2015, represents a new beginning in the global effort to stabilize the climate before it is too late. It recognizes the importance of food security in the international response to climate change, as reflected by many countries prominent focus on the agriculture sector in their planned contributions to adaptation and mitigation. To help put those plans into action, this report identifies strategies, financing opportunities, and data and information needs. It also describes transformative policies and institutions that can overcome barriers to implementation. The State of Food and Agriculture is produced annually. Each

edition contains an overview of the current global agricultural situation, as well as more in-depth coverage of a topical theme." *The SAGE Handbook of Social Network Analysis* Taylor & Francis  
 Here a leading scholar in constitutional law, Mark Tushnet, challenges hallowed American traditions of judicial review and judicial supremacy, which allow U.S. judges to invalidate "unconstitutional" governmental actions. Many people, particularly liberals, have "warm and fuzzy" feelings about judicial review. They are nervous about what might happen to unprotected constitutional provisions in the chaotic worlds of practical politics and everyday life. By examining a wide range of situations involving constitutional rights, Tushnet vigorously encourages us all to take responsibility for protecting our liberties. Guarding them is not the preserve of judges, he maintains, but a commitment of the citizenry to define itself as "We the People of the United States." The Constitution belongs to us collectively, as we act in political dialogue with each other-- whether in the street, in the voting booth, or in the legislature as

representatives of others. Tushnet urges that we create a "populist" constitutional law in which judicial declarations deserve no special consideration. But he warns that in so doing we must pursue reasonable interpretations of the "thin Constitution"—the fundamental American principles embodied in the Declaration of Independence and the Preamble to the Constitution. A populist Constitution, he maintains, will be more effective than a document exclusively protected by the courts. Tushnet believes, for example, that the serious problems of the communist scare of the 1950s were aggravated when Senator Joseph McCarthy's opponents were lulled into inaction, believing that the judicial branch would step in and declare McCarthy's actions unconstitutional. Instead of fulfilling the expectations, the Court allowed McCarthy to continue his crusade until it was ended.

Tushnet points out that in this context and in many others, errors occurred because of the existence of judicial review: neither the People nor their representatives felt empowered to enforce the Constitution because they mistakenly counted on the courts to do so. Tushnet's clarion call for a new kind of constitutional law will be essential reading for constitutional law experts, political scientists, and others interested in how and if the freedoms of the American Republic can survive into the twenty-first century.

In simplest terms, it is a house tour, but Mario Praz's Roman apartment was no ordinary house it was a wunderkammer, a house of wonders, rooms replete with objects d'art and sculpture, walls hung with paintings and prints, bureaus overflowing with postcards and ephemera. And Praz is no ordinary guide; he leads you, the reader, through each room discussing the objects therein. What emerge are his passions, his immense erudition, his insatiable curiosity, his undeniable amiability, his infectious enthusiasm. What emerges is a multi-layered disquisition on the nature of art, on the challenge of investigation and discovery, on the way in which art and the objects we choose to surround us tell stories.

This is neither a manual claiming to be a popular summary nor a systematic treatment of the art of the wall poster. It is an original work, of vast scope, structured into independent essays organised along a cohesive timeline, from 1880 to the second half of the twentieth century, reflecting on various aspects of artistic advertising graphics in an interdisciplinary dimension and with an international perspective. From the establishment of the poster as an innovative form of large-circulation visual communication and from its emancipation from the painting aesthetics of the nineteenth century to the understanding of the influences of advertising on the Pop Art experiences of the 1960s, according to a logic of inverted relations. The constant points of reference show the relations not only with painting but also with graphic processing and design, publishing graphics, original prints and photography; in the background, there also is cinema, decorative arts and urban furnishing. Artists, schools, movements, trade magazines, the book industry, exhibitions and performances, business advertising, political and war propaganda, social topics: these are some of the subjects and phenomena that interact in the history of advertising languages, which have been framed here by the specialist expertise of six authors. There is also the recurrent emergence of the dialects around the instruments and purposes of advertising communication, between practice and experimentation, commercial requirements, professional training and creative demands.

Israel Armstrong is a passionate soul, lured to Ireland by the promise of an exciting new career. Alas, the job that awaits him is

not quite what he had in mind. Still, Israel is not one to dwell on disappointment, as he prepares to drive a mobile library around a small, damp Irish town. After all, the scenery is lovely, the people are charming—but where are the books? The rolling library's 15,000 volumes have mysteriously gone missing, and it's up to Israel to discover who would steal them . . . and why. And perhaps, after that, he will tackle other bizarre and perplexing local mysteries—like, where does one go to find a proper cappuccino and a decent newspaper?

American law in the twentieth century describes the explosion of law over the past century into almost every aspect of American life. Since 1900 the center of legal gravity in the United States has shifted from the state to the federal government, with the creation of agencies and programs ranging from Social Security to the Securities Exchange Commission to the Food and Drug Administration. Major demographic changes have spurred legal developments in such areas as family law and immigration law. Dramatic advances in technology have placed new demands on the legal system in fields ranging from automobile regulation to intellectual property. Throughout the book, Friedman focuses on the social context of American law. He explores the extent to which transformations in the legal order have resulted from the social upheavals of the twentieth century—including two world wars, the Great Depression, the civil rights movement, and the sexual revolution. Friedman also discusses the international context of American law: what has the American legal system drawn from other countries? And in an age of global dominance, what impact has the American legal system had abroad? This engrossing book chronicles a century of revolutionary change within a legal system that has come to affect us all.

On 14 February 2012, the European Commission presented its first Alert Mechanism Report (AMR), prepared in accordance with Article 3 of Regulation (EU) No 1176/2011 on the prevention and correction of macroeconomic imbalances. The AMR serves as an initial screening device, helping to identify Member States that warrant further in-depth analysis to determine whether imbalances exist or risk emerging. According to Article 5 of Regulation No. 1176/2011, these country-specific in-depth reviews should examine the nature, origin and severity of macroeconomic developments in the Member State concerned which constitute, or could lead to, imbalances. On the basis of this analysis, the Commission will establish whether it considers that an imbalance exists and what type of policy follow-up it will recommend to the Council. For Slovenia, the AMR noted that two indicators in the scoreboard exceeded their thresholds in 2010 and suggested the need to assess the development and drivers of potential imbalances. The AMR explained that in the years before the crisis, Slovenia enjoyed strong growth and domestic demand conditions, coupled with some losses in price competitiveness and a gradual widening of the current account deficit. It identified signs that overheating occurred, particularly as regards private sector credit growth, construction value added and property prices. The Slovenian economy was hit hard by the global crisis and the AMR noted that this has brought some, perhaps temporary, adjustment in the external balance but this is still at an early stage. Against this background, Section 2 examines the external and internal dimensions of imbalances including developments in competitiveness, private sector indebtedness and in asset markets. This is followed by a closer look at the implications of indebtedness of non-financial corporations for the banking sector in Section 3. Section 4 presents possible policy considerations.

In this challenging collection of new essays, leading philosophers and criminal lawyers from the United States, the United Kingdom, and Canada break with the tradition of treating the philosophical foundations of criminal law as an adjunct to the study of punishment. Focusing clearly on the central issues of moral luck, mistake, and mental illness, this volume aims to reorient the study of criminal law. In the process of retrieving valuable material from traditional law classifications, the contributors break down false associations, reveal hidden truths, and establish new patterns of thought. Their always illuminating and sometimes startling conclusions makes this essential reading for all those interested in the philosophy of criminal law.

This volume is a history of economics – as it was interpreted, discussed and established as a discipline – in the 20th century. It highlights the pluralism of the discipline and brings together leading voices in the field who reflect on their lifelong work. The chapters draw on a host of traditions of economic thought, including pre-classical, classical, Marxian, neoclassical, Sraffian, post-Keynesian, Cantabrigian and institutionalist traditions in

economics. Further, the volume also looks at the history of economics in India and its evolution as a discipline since the country's independence. This book will appeal to students, researchers and teachers of economics and intellectual history, as well as to the interested general reader.

Towards Relational Sociology argues that social worlds comprise networks of interaction and relations. Crossley asserts that relations are lived trajectories of iterated interaction, built up through a history of interaction, but also entailing anticipation of future interaction. In addition, he demonstrates how networks comprise multiple dyadic relations which are mutually transformed through their combination. On this conceptual basis he builds a relational foundation for sociology. Over the course of the book, three central sociological dichotomies are addressed – individualism/holism, structure/agency and micro/macro – and utilised as a foil against which to construct the case for relational sociology. Through this, Crossley is able to argue that neither individuals nor 'wholes' – in the traditional sociological sense – should take precedence in sociology. Rather sociologists should focus upon evolving and dynamic networks of interaction and relations. The book covers many of the key concepts and concerns of contemporary sociology, including identity, power, exchange and meaning. As such it is an invaluable reference tool for postgraduate students and researchers alike.

This Springer Brief provides a comprehensive overview of the background and recent developments of big data. The value chain of big data is divided into four phases: data generation, data acquisition, data storage and data analysis. For each phase, the book introduces the general background, discusses technical challenges and reviews the latest advances. Technologies under discussion include cloud computing, Internet of Things, data centers, Hadoop and more. The authors also explore several representative applications of big data such as enterprise management, online social networks, healthcare and medical applications, collective intelligence and smart grids. This book concludes with a thoughtful discussion of possible research directions and development trends in the field. Big Data: Related Technologies, Challenges and Future Prospects is a concise yet thorough examination of this exciting area. It is designed for researchers and professionals interested in big data or related research. Advanced-level students in computer science and electrical engineering will also find this book useful.

Investigating the extent to which the European Union can be defined as a "highly competitive social market economy", this edited collection illustrates and tests the constitutional reverberations of Art. 3(3) of the Treaty on the European Union, and discusses its actual and potential transformative effect. In the aftermath of Brexit, and in the 60th anniversary of the Treaty

of Rome, the book is particularly timely and topical, offering new and deeper insights on the complex and constantly evolving social dimension of the EU, ultimately reflecting on how the objective of (re)constituting the EU as a "highly competitive social market economy" might best be achieved.
