This book offers you a
brief, but very involved
look into the
operations in the
drilling of an oil & gas
wells that will help you

to be prepared for job
interview at oil & gas
companies. From start
to finish, you'll see a
general prognosis of
the drilling process. If
you are new to the oil
& gas industry, you'll
enjoy having a leg up
with the knowledge of
these processes. If you
are a seasoned oil &
gas person, you'll enjoy
reading what you may
or may not know in
these pages. This
course provides a non-
technical overview of
the phases, operations
and terminology used
on offshore drilling
platforms. It is
intended also for non-
drilling personnel who
work in the offshore
drilling, exploration
and production
industry. This includes

marine and logistics personnel, accounting, administrative and support staff, environmental professionals, etc. No prior experience or knowledge of drilling operations is required. This course will provide participants a better understanding of the issues faced in all aspects of drilling operations, with a particular focus on the unique aspects of offshore operations.

The huge potential in future connected services has as a precondition that privacy and security needs are dealt with in order for new services to be accepted. This issue is increasingly on the agenda both at company and at individual level. Cybersecurity and Privacy - bridging the

gap addresses two very complex fields of the digital world, i.e., Cybersecurity and Privacy. These multifaceted, multidisciplinary and complex issues are usually understood and valued differently by different individuals, data holders and legal bodies. But a change in one field immediately affects the others.

Policies, frameworks, strategies, laws, tools, techniques, and technologies - all of these are tightly interwoven when it comes to security and privacy. This book is another attempt to bridge the gap between the industry and academia. The book addresses the views from academia and industry on the subject.

The global automotive industry faces the most influential changes since the revolutionary introduction of mass production a century ago. Latecomer firms from Asia are challenging the western incumbents. They can change the rules of the game in the industry by leapfrogging several steps in their development process. This study seeks to contribute to the discussion of latecomer firms by gaining insights into the catch up processes of five automotive companies in the passenger car segment, namely BYD (PRC), Chery (PRC), Geely (PRC), Tata

Motors (India) and Mahindra & Mahindra (India). Based on learning theories and the core processes of car manufacturers, the author develops a catch up framework in order to compare automotive latecomers. The Korean manufacturer Hyundai serves as an example for a successful catch up, and provides a contextual framing for catch up processes in the automotive sector. An analysis of empirical data provides evidence for the evaluation of the catch up status of the five challenger firms. The author emphasizes the influence of institutional settings in China and India and the role of business groups that can act as facilitators for the

catch up process. Finally, the study clusters the catch up strategies of the five observed companies in order to compare their approach.

This book constitutes the proceedings of the 15th International Conference on Risks and Security of Internet and Systems, CRITIS 2020, which took place during November 4-6, 2020. The conference was originally planned to take place in Paris, France, but had to change to an online format due to the COVID-19 pandemic. The 16 full and 7 short papers included in this volume were carefully

reviewed and selected from 44 submissions. In addition, the book contains one invited talk in full paper length. The papers were organized in topical sections named: vulnerabilities, attacks and intrusion detection; TLS, openness and security control; access control, risk assessment and security knowledge; risk analysis, neural networks and Web protection; infrastructure security and malware detection.

By 2020, the Internet of Things (IoT) will consist of millions of computational devices intimately connected to real-world aspects of human life. In this insightful book, Professor Sean Smith, who worked in information security long before the web appeared, explains that if we build the IoT the way we built the current internet and other information technology initiatives, we're headed for

trouble. With a focus on concrete solutions, *The Internet of Risky Things* explains how we can avoid simple flaws that have plagued several dramatic IT advances in recent decades. Developers, engineers, industrial designers, makers, and researchers will explore "design patterns of insecurities" and learn what's required to route around or fix them in the nascent IoT. Examine bugs that plague large-scale systems, including integer overflow, race conditions, and memory corruption. Look at successful and disastrous examples of previous quantum leaps in health IT, the smart grid, and autonomous vehicles. Explore patterns in

coding, authentication, and cryptography that led to insecurity Learn how blunders that led to spectacular IT disasters could have been avoided

 This book intends to open the debate between three main aspects of clinical practice:
 psychotherapy (including psychological and

philosophical influences), neurobiology and pharmacology. These three main themes are clinically applied in what we call the "Intervention Triangle". The book will first focus on epistemologically distinct frameworks and gradually attempt to consider the integration of these three fundamental vertexes of practice. These vertexes are substantially unbalanced in the mental health field, and thus, this book tries to make sense of this phenomenon. Unique in its interdisciplinary and

comprehensive view of mental health problems and approaches, this book offers a new perspective on unidisciplinary integration that previous publications have not considered. As an innovative contribution to its field, this volume will be particularly relevant to practitioners working towards integrative frameworks. It will also be of interest to students, clinicians and researchers, in particular, those working in psychology, medicine, psychiatry, philosophy, social work, and pharmacy.
