An inside look at America's most controversial charter schools, and the moral and political questions around public education and school choice. The promise of public education is excellence for all. But that promise has seldom been kept for low-income children of color in America. In *How the Other Half Learns*, teacher and education journalist Robert Pondiscio focuses on Success Academy, the network of controversial charter schools in New York City founded by Eva Moskowitz, who has created something unprecedented in American education: a way for large numbers of engaged and ambitious low-income families of color to get an education for their children that equals and even exceeds what wealthy families take for granted. Her results are astonishing, her methods unorthodox. Decades of well-intended efforts to improve our schools and close the "achievement gap" have set equity and excellence at war with each other: If you are wealthy, with the means to pay private school tuition or move to an affluent community, you can get your child into an excellent school. But if you are poor and black or brown, you have to settle for "equity" and a lecture--about

fairness. About the need to be patient. And about how school choice for you only damages public schools for everyone else. Thousands of parents have chosen Success Academy, and thousands more sit on waiting lists to get in. But Moskowitz herself admits Success Academy "is not for everyone," and this raises uncomfortable questions we'd rather not ask, let alone answer: What if the price of giving a first-rate education to children least likely to receive it means acknowledging that you can't do it for everyone? What if some problems are just too hard for schools alone to solve?

Essentials of Personnel Assessment and Selection discusses the essentials that managers and other

well-educated people should know about the assessment processes so widely used in contemporary society--and so widely not understood. It emphasizes that good prediction requires well-formed hypotheses about personal characteristics that may be related to valued behavior at work and the need for developing a theory of the attribute one hypothesizes as a predictor--a thought process too often missing from work on selection procedures. In addition, it explores such topics as team-member selection, situational judgment tests, non-traditional tests, individual assessment, and testing for diversity. The goal is to produce an accessible guide to assessment that covers basic and advanced concepts in a straight-forward, readable style. It provides a review of the most relevant statistical concepts and modern selection practices that will equip the reader with the tools needed to be competent consumers of assessment procedures and practices, and to be well-informed about the kinds of questions to be answered in evaluating them. This book will appeal to instructors of advanced undergraduate and master's level courses on personnel selection and assessment. If supplemented by other readings on selected topics, it would be useful in doctoral seminars. Also, students interested in becoming users of research-based assessment and selection information and techniques will find it useful.

In most discussions about intellectual development and assessment, the focus is on children. Rarely do assessment practitioners focus on cognitive impairments and other intellectual development issues pertaining to adults. On the cutting edge of assessment issues, Gregory's book includes adults as his primary focus, attempting to answer such important questions as: When is an intellectual assessment appropriate? How do professional and ethical standards inform the practice of assessment? This book responds to a void in the field of assessment following the recent release of the WAIS-III (Wechsler Adult Scale) test, which is now the cornerstone for adult intellectual assessment. Until the publication of this book, there has been no extensive information available about the effective use and interpretation of this and other important assessment tests. This single volume contains comprehensive information, including test norms and standards for effective use of the WAIS-III and many other tests (mental status, attention/concentration, sensory/perceptual, psychomotor, memory, language, drawing, higher cognitive functions, intelligence). Readers will understand the context of psychological assessment, the importance of personal background and mental status in assessment, and the shifting professional standards and ethics of today.
