The first edition of *Formulation in Psychology and Psychotherapy* caught the wave of growing interest in formulation in a clinical context. This completely updated and revised edition summarises recent practice, research, developments and debates while retaining the features that made the first a leading text in the field. It contains new chapters on personal construct formulation, formulation in health settings, and the innovative practice of using formulation in teams. The book sees formulation as a dynamic process which explores personal meaning collaboratively and reflectively, taking account of relational and social contexts. Two case studies, one adult and one child, illustrate the use of formulation from the perspectives of expert clinicians from six different theoretical positions. The book encourages the reader to take a constructively critical perspective on the many philosophical, professional and ethical debates raised by the process of formulating people's problems. Among the issues explored are: The social and political context of formulation
 Formulation in relation to psychiatric diagnosis
 The limitations of formulation
 Controversies and debates about formulation
 This readable and comprehensive guide to the field provides a clear, up to date and thought-provoking overview of formulation from a number of perspectives, essential for clinicians working in all areas of mental health and social care, psychology, therapy and counselling.

Promoting Social Cohesion Through Education Macmillan
 What pedagogic challenges and opportunities arise as gay, lesbian, and queer themes and perspectives become an increasingly visible part of English language classes within a variety of language learning contexts and levels? What sorts of teaching practices are needed in order to productively explore the sociosexual aspects of language, identity, culture, and communication? How can English language teachers promote language learning through the development of teaching approaches that do not presume an exclusively heterosexual world? Drawing on the experiences of over 100 language teachers and learners, and using a wide range of research and theory, especially queer education research, this innovative, cutting-edge book skillfully interweaves classroom voices and theoretical analysis to provide informed guidance and a practical framework of macrostrategies English language teachers (of any sexual identification) can use to engage with lesbian/gay themes in the classroom. In so doing, it illuminates broader questions about how

to address social diversity, social inequity, and social inquiry in a classroom context.

How do children cope when their world is transformed by war? This book draws on memory narratives to construct an historical

anthropology of childhood in Second World War Britain, focusing on objects and spaces such as gas masks, air raid shelters and bombed-out buildings. In their struggles to cope with the fears and upheavals of wartime, with families divided and familiar landscapes lost or transformed, children reimagined and reshaped these material traces of conflict into toys, treasures and playgrounds. This study of the material worlds of wartime childhood offers a unique viewpoint into an extraordinary period in history with powerful resonances across global conflicts into the present day.

Coral disease is quickly becoming a crisis to the health and management of the world's coral reefs. There is a great interest from many in preserving coral reefs. Unfortunately, the field of epizootiology is disorganized and lacks a standard vocabulary, methods, and diagnostic techniques, and tropical marine scientists are poorly trained in wildlife pathology, veterinary medicine, and epidemiology. Diseases of Coral will help to rectify this situation.

Combining literary criticism and theory with anthropology and cognitive science, this highly relevant book argues that we are fundamentally shaped by dialogue. Patrick Grant looks at the manner in which dialogue informs and connects the personal, political, and religious dimensions of human experience and how literacy is being eroded through many factors, including advances in digital technology. The book begins by tracing the history of evolved communication skills and looks at ways in which interconnections among tragedy, the limits of language, and the silence of abjection contribute to an adequate understanding of dialogue. Looking at examples such as "truth decay" in journalism and falling literacy levels in school, alongside literary texts from Malory and Shakespeare, Grant shows how literature and criticism embody the essential values of dialogue. The maintenance of complex reading and interpretive skills is recommended for the recuperation of dialogue and for a better understanding of its fundamental significance in the shaping of our personal and social lives. Tapping into debates about the value of literature and the humanities, and the challenges posed by digitalization, this book will be of interest and significance to people working in a wide range of subjects, including literary studies, communication studies, digital humanities, social policy, and anthropology.

The New York Times bestseller! "Frank Hamer, last of the old breed of Texas Rangers, has not fared well in history or popular culture. John Boessenecker now restores this incredible Ranger to his proper place alongside such fabled lawmen as Wyatt Earp and Eliot Ness. Here is a grand adventure story, told with grace and authority by a master historian of American law enforcement. Frank Hamer can rest easy as readers will finally learn the truth behind his amazing career, spanning the end of the Wild West through the bloody days of the gangsters." --Paul Andrew Hutton, author of *The Apache Wars* To most Americans, Frank Hamer is known only as the "villain" of the 1967 film *Bonnie and Clyde*. Now, in *Texas Ranger*, historian John Boessenecker sets out to restore Hamer's good name and prove that he was, in fact, a

classic American hero. From the horseback days of the Old West through the gangster days of the 1930s, Hamer stood on the front lines of some of the most important and exciting periods in American history. He participated in the Bandit War of 1915, survived the climactic gunfight in the last blood feud of the Old West, battled the Mexican Revolution's spillover across the border, protected African Americans from lynch mobs and the Ku Klux Klan, and ran down gangsters, bootleggers, and Communists. When at last his career came to an end, it was only when he ran up against another legendary Texan: Lyndon B. Johnson. Written by one of the most acclaimed historians of the Old West, *Texas Ranger* is the first biography to tell the full story of this near-mythic lawman.

Quality Assurance in Tropical Fruit Processing The Stationery Office

Tropical and subtropical countries have become well aware of the fact, that they must make better use of their fruits. In spite of the favourable climatic conditions for the production of varieties of delicious fruits in such countries, continuously high temperatures shorten the shelf-life of most fruits and fruit products. A tropical climate provides ideal conditions for rapid growth of spoilage microorganisms and for chemical reactions. Most of such reactions in fruits and fruit products are deteriorative in nature causing high respiration rates, texture softening and spoilage of fruit. This causes loss of colour, flavour and vitamins, and browning of fruit products. Even though a fruit product has been rendered microbiologically stable, these chemical reactions continue to occur in storage, and they occur much more rapidly in a tropical climate. The processing of fruits and soft drinks is a predominate food industry in tropical and subtropical countries. Some of the large companies in such industries are partly foreign owned. They seem to be efficiently operated with adequate capital, good management, and technological competence, all of which are usually imported from the parent company. However, most of small and medium companies are locally owned, and are deficient in technology and management ability. The products are generally fair. It is rare to find a trained quality assurance manager in these companies. Processing of good fruit products, especially for export, requires sound fruit processing lines as well as good management that achieves internationally accepted standards of quality.

The Psychology of Experiencing Routledge

Writer Helen Bailey's world fell apart in early 2011 when she and her workaholic husband took off on a well-earned break to Barbados and days after arriving Helen watched helplessly from the beach as he was dragged out to sea in a rip-current and drowned. Alone and more than three thousand miles from home, she was a wife at breakfast and a widow by lunchtime. With her life as she knew it shattered, Helen began to chronicle living after such devastating and shocking loss in a blog - *Planet Grief* - and gained a worldwide following from many who had experienced huge loss, whether through death or divorce. And now her blog has become a book. Anecdotal, witty, heartbreaking and utterly grounded, *When Bad Things Happen to Good Bikinis* covers all the obvious struggles in the aftermath of a loss, as well as many not-so-obvious but just as poignant everyday obstacles. Helen has emerged from her nightmare, and her story will bring wry humour, comfort and hope to a huge number of people, whatever their circumstances.

Jeremy Leggett gives a personal testimony of the dangers often ignored and incompletely understood - a journey through the human mind, the institutionalization of denial, and the reasons civilizations fail. It is also an account of tantalizing hope, because mobilizing renewables and redeploying energy funding can soften the crash of modern capitalism and set us on a road to renaissance.
