A Field Guide to Tropical Reef Fishes of the Indo-Pacific

New World Publications Incorporated

The Indo-Pacific region is the dream destination for all SCUBA divers and snorkellers. The coral reefs in this region are bursting with marine life and are home to more animal species than any other diving spot in the world--more than 40 per cent of all coral reef fishes known worldwide. Added to this, the waters are crystal-clear, giving the best chance of viewing the underwater stars. Top-quality, close-up photographs of each species (in some cases including juvenile or sub-adult variants) are accompanied by detailed information listing identifying features, size, biology,

and distribution. The introductory section focuses on specific types of behaviour, such as mimicry, cleaning stations, and the symbiotic relationships between various species. The species descriptions that follow are grouped in three chapters on fishes, invertebrates, and reptiles and sea mammals. Covering Australia, Indonesia, Malaysia, the Maldives, Mauritius, Melanesia, Micronesia, the Philippines, Polynesia, Seychelles, Singapore, Sri Lanka and Thailand, and describing over 800 species, this book is an invaluable identification guide.

Colours of the Reef - IUCN

This is a handy guide to all fishes that are likely to be observed by anybody visiting or diving on the coral reefs of the Indo-Pacific and the western Atlantic Oceans to a depth of sixty meters. Accessible to amateur marine life enthusiasts, this book is the first comprehensive guide of its kind. It enables the reader

quickly to identify 2,074 species of fish and includes over 2,500 color illustrations depicting the major forms of each species-- male, female, immature, or geographical varieties. Here coral reef is used broadly to include areas adjacent to reefs where corals may occur, such as harbors, bays, and rocky tidepools as well as reef-associated habitats such as seagrass beds, sandy expanses, and open rocky bottoms. The text begins with a valuable introduction to such topics as the coral reef environment, habitats, ecology, social interactions, conservation, and dangerous marine fishes. Of particular interest is a section offering pointers on identifying fish. The text proceeds according to region, depicting each species and its varieties, and offering information on its geographic range and where on the coral reef itself the fish may be found. Important identification characteristics are highlighted on every color plate.
