The New Domestic Automakers in the United States and Canada Springer Nature
As U.S. and Canadian automakers and dealers face bankruptcy and Toyota battles unprecedented quality-control problems, Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr.

Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz – rich cars, poor quality. There's only one Saturn you should buy. Toyota – enough apologies: "when you mess up, 'fess up."

The available literature on energy storage

technologies in general, and mechanical energy storage in particular, is lacking in terms of both quantity and quality. This edited volume focuses on novel (yet uncomplicated) ideas that are currently part of the Energy Storage curriculum at the University of Sharjah, UAE. These techniques have been extensively researched and their prototypes are central to the undergraduate Energy Storage Lab that is associated with the course. Although ideally suited for wind energy storage, the techniques described are also suitable for renewable energy

storage in general, and offer high two-way efficiency ratings.

Car and Driver Random House Digital, Inc. This practical and engaging book provides a coherent approach to global business responsibility and ethics based on the latest research, theory, and practice. The

authors incorporate numerous interesting and current real world examples to support the argument that corporations need to - and can - identify and implement processes that foster ethical conduct, ensure basic human rights, protect the natural environment, and enhance social justice wherever businesses operate around the globe. "Global Business Citizenship" combines elements of political theory, stakeholder relationships, business ethics, corporate social performance, accountability and measurement, and organizational change. Its practical approach encompasses "best practices" in stakeholder management, experiments in applying corporate values to local conditions, and social environmental auditing and reporting. Focusing on the strategic alignment and change management process for implementing business citizenship principles and practices, it is an essential supplement for any course concerned with ethics and social responsibility in today's global business climate.

Bis nachhaltige technische und wirtschaftliche Lösungen für den Elektroantrieb gefunden sind, behält der Verbrennungsmotor seine dominierende Stellung als Antriebsquelle für Pkw und Nutzfahrzeuge. In den nächsten Jahrzehnten kommt dem klassischen Motor damit weiterhin die Rolle des Schrittmachers für CO2-arme Mobilität zu. Um die ambitionierten Umweltziele zu erreichen, müssen alle Komponenten, Systeme und Funktionen des Motors weiter optimiert und an die immer komplexeren Anforderungen im Gesamtsystem angepasst werden.
