The average real estate sells ten to twelve homes per year. A superstar salesperson sells fifty. Last year alone, Ralph Roberts sold more than six hundred residential properties -- fifty time more than the average competitor! What the secret behind the nation's bestselling real estate agent? How can you achieve similar phenomenal success in your field? More important, can you reach the megalevels Ralph Roberts attains year after year? Yes!

Extracts from Advanced Engineering Mathematics John Wiley & Sons Engineering the Complex SOC The first unified hardware/software guide to processor-centric SOC design Processor-centric approaches enable SOC designers to complete far larger projects in far less time. Engineering the Complex SOCis a comprehensive, example-driven guide to creating designs with configurable, extensible processors. Drawing upon Tensilica's Xtensa architecture and TIE language, Dr. Chris Rowen systematically illuminates the issues, opportunities, and challenges of

processor-centric design. Rowen introduces a radically new design methodology, then covers its essential techniques: processor configuration, extension, hardware/software co-generation, multiple processor partitioning/communication, and more. Coverage includes: Why extensible processors are necessary: shortcomings of current design methods Comparing extensible processors to traditional processors and hardwired logic Extensible processor architecture and mechanisms of processor extensibility Latency, throughput, coordination of parallel functions, hardware interconnect options, management of design complexity, and other issues Multiple-processor SOC architecture for embedded systems Task design from the viewpoints of software andhardware developers Advanced techniques: implementing complex state machines, task-to-task synchronization, power optimization, and more Toward a "sea of processors": Long-term trends in SOC design and semiconductor technology For all architects, hardware engineers, software designers, and SOC program managers involved with complex SOC design; and for all managers investing in SOC designs, platforms, processors, or expertise. There has been surprisingly little written about H.M. Brisbane Prison, which was better known to one all a 'Boggo Road Gaol', that is, from the perspective of male prisoners. The Real Boggo Road provides an all-too-rare account of life inside the Queensland prison system of the 1960's from the beginning to the end of an era, culminating in the eventual closure of the notorious Boggo Road system, and of its caged and underground incarceration. It is the view of many that harsh intimidating treatment and recidivisim go hand in hand, but in this first of many writings by Larry Campbell we discover an insight that will be noticed in the area of penology, criminology, as well as social and welfare studies. It, is the authors view, through historical recall, and although his many writings are written with sincerity, they may tend to offend those who have lived and worked behind the walls of such institutions. He makes no apology.
