of rate of condenser area isOptimization of a Condenser in a Thermal Power PlantThe turbine outlet loss increases by reduction of the condenser pressure. In fact reduction of condenser pressure decreases the steam quality or increases the water droplets at the turbine exhaust. These droplets will create a drag force which tends to reduce the turbine output power. 2).Improvement Power Plant Efficiency with Condenser PressureA steam condenser is a closed vessel in which steam is condensed by abstracting the heat by cooling it with water and where the pressure is maintained below atmospheric pressure.
