E-PAPER DISPLAYS An in-depth introduction to a promising

technology, curated by one of its pioneering inventors Electronic paper (e-paper) has one of the most promising futures in technology. E-paper's potential is unlimited, as the displays require extremely low power and imitate the aesthetic of ink on the page. This allows e-paper devices to have a wider range of viewing angles than traditional LED products and are capable of being viewed in direct sunlight—and without any additional power. As a result, e-paper displays create less eye strain, have a greater flexibility in their use, and have the potential to be used in place of paper for billboard advertising, educational applications, and transport signage, and more. In *E-Paper Displays*, editor Bo-Ru Yang and his team of experts present a detailed view into the important technologies involved in e-paper displays, with a particular emphasis on how this technology's unique properties make possible a wide range of personal and professional electronic products. As climate change makes efficient energy use more important than ever, e-paper can become an essential tool for future products on a large scale. As we rely more and more on technology, having lightweight devices with long battery life will become critical. This book provides engineers and innovators with an introduction to this important technology and shows new pathways for development. *E-Paper Displays* readers will also find: The editor is one of the leading pioneers in this technology Contributions from an international team of experts in e-paper technology Descriptions of many advanced display types that rely on different principles than the widely used LCD and OLED types Another innovative title from Wiley-SID (Society for Information Displays) series As we enter a new stage in our industrial development, *E-Paper Displays* is an

essential reference for computer engineers and developers, as well as innovators and scientists, and their students.

On a summer day in 1828, Book of Mormon scribe and witness Martin Harris was emptying drawers, upending furniture, and ripping apart mattresses as he desperately looked for a stack of papers he had sworn to God to protect. Those pages containing the only copy of the first three months of the Joseph Smith's translation of the golden plates were forever lost, and the detailed stories they held forgotten over the ensuing years--until now. In this highly anticipated work, author Don Bradley presents over a decade of historical and scriptural research to not only tell the story of the lost pages but to reconstruct many of the detailed stories written on them. Questions explored and answered include: Was the lost manuscript actually 116 pages? How did Mormon's abridgment of this period differ from the accounts in Nephi's small plates? Where did the brass plates and Laban's sword come from? How did Lehi's family and their descendants live the Law of Moses without the temple and Aaronic priesthood? How did the Liahona operate? Why is Joseph of Egypt emphasized so much in the Book of Mormon? How were the first Nephites similar to the very last? What message did God write on the temple wall for Aminadi to translate? How did the Jaredite interpreters come into the hands of the Nephite kings? Why was King Benjamin so beloved by his people? Despite the likely demise of those pages to the sands of time, the answers to these questions and many more are now available for the first time in nearly two centuries in *The Lost 116 Pages: Reconstructing the Book of Mormon's Missing Stories*.

It's the day of Nina Riva's annual end-of-summer party, and anticipation is at a fever pitch. A Plato Reader offers eight of Plato's best-known works-- Euthyphro, Apology, Crito, Meno, Phaedo, Symposium, Phaedrus, and Republic--unabridged, expertly introduced and annotated, and in widely admired translations by C. D. C. Reeve, G. M. A. Grube, Alexander Nehamas, and Paul Woodruff. The collection features Socrates as its central character and a model of the examined life. Its range allows us to see him in action in very different settings and philosophical modes: from the elenctic Socrates of the Meno and the dialogues concerning his trial and death, to the erotic Socrates of the Symposium and Phaedrus, to the dialectician of the Republic. Of Reeve's translation of this final masterpiece, Lloyd P. Gerson writes, "Taking full advantage of S. R. Slings' new Greek text of the Republic, Reeve has given us a translation both accurate and limpid. Loving attention to detail and deep familiarity with Plato's thought are evident on every page. Reeve's brilliant decision to cast the dialogue into direct speech produces a compelling impression of immediacy unmatched by other English translations currently available."

In recent decades, there have been significant changes in the way corporate innovation activities are performed. They include changes in the innovation process, flexibility to outsource certain innovation activities, and by far, the most important one, wider choice in the location of innovation. What caught the most attention of is the trend towards globalization of research and development (R&D) and thereby performance of innovation activities away from the home countries. The main concerns

relate to the two new trends: First, the multinational corporations (MNCs) locating strategic innovation activities in some countries outside the industrialized world, which can be referred to as 'emerging economies'; and Second, since 2000, some companies from the emerging economies have started entering the global markets with innovative products and services, developed through their own R&D. Both these new developments have managerial implications for companies and policy implications for the host countries (where such R&D is performed), as well as for the home countries of the companies. Further, innovative products and services resulting from R&D activities in emerging economies seem to better address the needs of consumers at the bottom-of-the-pyramid in other developing countries. This book explores and analyzes these issues. This research presented in Global Innovation in Emerging Economies is applicable to both the industrialized and developing worlds, although from different perspectives - the former would like to prevent relocation of R&D from their countries, and the latter want more of R&D-related investments.
