Oulton Park in the late 1960s was one of the last circuits to play host to non-championship Formula 1 races. Set in beautiful Cheshire parkland, it has always been a favorite with drivers who relish its challenging curves and with spectators who could watch their heroes compete on a true road circuit. Drivers such as Jim Clark, Jackie Stewart, Graham Hill, Surtees, Rindt and Brabham came to Oulton for the Gold Cup and spectators could see and even meet them in the open paddock atmosphere of the time. Major sports & GT races such as the RAC TT were also on the Oulton Park calendar with Lola T70s, GT40s, Ferraris, Lotus and, of course, Chevrons in the hands of Hulme, Redman, Bonnier and other top drivers. Club race meetings provided variety and plenty of action with the VSCC's Seaman Trophies meeting for vintage and historic racers being the highlight of the season for many

racegoers.

Chirality in Drug Design and Synthesis is a collection of papers that discusses the property of asymmetry in the structural and synthetic chemistry of natural products, including the significance of chirality in medicinal chemistry. These papers examine the need for the preparation and study of pure enantiomers of chiral drug substances and their mechanism of interaction with enzymes and receptors. These papers also investigate the techniques in studying these interactions, as well as analyze the methods for their synthesis in enantiomerically pure form. One paper discusses the pharmacological and pharmacokinetic analyses made that point to the differences in the activity and disposition of enantiomeric pairs. Another paper reviews the

implications of the neglect of stereoselectivity at the different levels during the examination process of racemic drugs. Since no general guidelines exist for the development of drugs with chiral centers, one paper suggests a case-by-case approach in evaluating the safety and efficacy of drugs, particularly as regards how isomers differ in their effects. This collection is suitable for the pharmacologist, medicinal chemists, toxicologists, mechanistic chemists and synthetic organic chemists.
