Dynamic Shipping and Port Development in the Globalized

Economy Princeton University Press
Global Logistics Network Modelling and Policy provides guidelines on quality policy, covering investments, management and planning for port and hinterland infrastructure, roads, railways and inland waterway ports. The book first describes the authors' concept and formulation models, followed by a description and analysis of the applied data. As shipping companies fiercely compete in an effort to achieve greater efficiency and impact infrastructure policy and plan for the entire supply chain, they need tactics that drive quality transportation policy and new ways to model and simulate worldwide cargo movements, all while estimating demand and capacity of systems. This book provides quantitative tools for modeling, analysis, and simulation of worldwide, inter-modal cargo movement – helping forecast the impacts of logistics and related policies in each region of the world. It covers useful applications for every region of the world, allowing policymakers to tailor results for their own specific uses. Delivers sophisticated quantitative tools for modeling simulations, providing powerful analysis of global intermodal cargo movements Features examples of tools applied to logistical policy situations in every region of the world Serves as a bridge between theory and

practice in the field of freight transportation research Provides detailed, data-supported case studies and real-world examples for transportation modelers, planners and policymakers

Ship Design Springer

Praise for *Magician's Choice* "In the future of *Magician's Choice*, magic has displaced science, but magic takes as much rigor to operate as technology ever did. Stefon Mears weaves an entertaining space opera out of tuning forks, duels, and dragon familiars. The result is an impressive debut novel." – Bruce Holland Rogers Author of *The Keyhole Opera About Magician's Choice* Academic wizard Donal Cuthbert thought courier work would be easy money. But after someone tries to blow him up, Donal must navigate a web of lies, murders, and corporate espionage, including a beautiful liaison who might be his ally ... or his greatest enemy. Helioship captain John Jacobs faces financial ruin unless this Mars-Earth run goes perfectly. But squabbling crew members, threats from deep space, and a passenger complement full of conspiracies might destroy his ship en route. Together Donal and Jacobs find themselves facing a choice ... with the fate of worlds in the balance.

Container Logistics Routledge

Boarding an ocean liner with her boyfriend Derek, Beth comes face-to-face with her past in the form of Arthur, an ex-lover, which conjures up the memories of their unsavory past, acting as spiritual mediums to fleece the innocent out of their hard-earned money. *USA and European Perspectives* Springer

Infrastructure Investment in Indonesia: A Focus on Ports presents an important and original collation of current material investigating the efficient facilitation of major infrastructure projects in Indonesia and Australia, with an emphasis on infrastructure investment and a focus on port planning and development. This interdisciplinary collection—spanning the disciplines of engineering, law and planning—draws helpfully on a range of practical and theoretical perspectives. It is the collaborative effort of leading experts in the fields of infrastructure project initiation and financing, and is based on international research conducted by the University of Melbourne, Universitas Indonesia and Universitas Gadjah Mada. The volume opens with a macroscopic perspective, outlining the broader economic situations confronting Indonesia and Australia, before adopting a more microscopic perspective to closely examine the issues surrounding major infrastructure investment in both countries. Detailed case studies are provided, key challenges are identified, and evidence-based solutions are offered. These solutions respond to such topical issues as how to overcome delays in infrastructure project initiation; how to enhance project decision-making for the selection and evaluation of projects; how to improve overall efficiency in the arrangement of project finance and governance; and how to increase the return provided by investment in infrastructure. Special focus is given to proposed improvements to the port cities of Indonesia in the areas of major infrastructure project governance, policies, engagement, operation and processes. By rigorously investigating the economic, transport, finance and policy aspects of

infrastructure investment, this book will be a valuable resource for policy makers and government officials in Indonesia and Australia, infrastructure investment organisations, and companies involved in exporting services between Indonesia and Australia. This book will also be of interest to researchers and students of infrastructure planning and financing, setting a solid foundation for subsequent investigations of financing options for large-scale infrastructure developments.

A Practical Guide to the Engine Room of World Trade United Nations

"Global Trends 2025: A Transformed World" is the fourth unclassified report prepared by the National Intelligence Council (NIC) in recent years that takes a long-term view of the future. It offers a fresh look at how key global trends might develop over the next 15 years to influence world events. Our report is not meant to be an exercise in prediction or crystal ball-gazing. Mindful that there are many possible "futures," we offer a range of possibilities and potential discontinuities, as a way of opening our minds to developments we might otherwise miss. (From the NIC website)

Ship Management Elsevier

This book constitutes the refereed proceedings of the 9th International Conference on Computational Logistics, ICCL 2018, held in Vietri sul Mare, Italy, in October 2018. The 32 full papers presented were carefully reviewed and selected from 71 submissions. They are organized in topical sections as follows: maritime shipping and routing, container handling and container terminals, vehicle routing and multi-modal

transportation, network design and scheduling, logistics oriented combinatorial optimization.

Third Report of the Commission on Merchant Marine and Defense

Government Printing Office

These proceedings contain research presented at the 6th International Conference on Dynamics in Logistics, held in February 2018. The integration of dynamics within the modeling, planning and control of logistic processes and networks has shown to contribute massively to the improvement of the latter. Moreover, diversification of markets and demand has increased both the complexity and the dynamic changes of problems within the area of logistics. To cope with these challenges, it must become possible to identify, describe and analyze such process changes. Moreover, logistic processes and networks must be revised to be rapidly and flexibly adaptable to continuously changing conditions. This book presents new ideas to solve such problems, offering technological, algorithmic and conceptual improvements. It primarily addresses researchers and practitioners in the field of industrial engineering and logistics.

The Role of the Container in the Supply Chain ASP / VUBPRESS / UPA

With over 80 per cent of global trade by volume and more than 70 per cent of its value being carried on board ships and handled by seaports worldwide, the importance of maritime transport for trade and development cannot be overemphasized. The 2017 Review of Maritime Transport presents and discusses key developments in the world economy and international trade and related impacts on shipping demand and supply, freight and charter markets, as well as seaports and the regulatory and

legal framework. In addition to relevant developments in 2016 and the first half of 2017, this year's edition of the Review also features a special chapter on maritime transport connectivity, reflecting the prominence of physical and electronic connectivity as a priority area in the trade and development policy agenda.

The Regulation of Continental Shelf

Development World Bank Publications

Introducing a new methodology for measuring competitiveness in shipping ports, this analysis provides policy makers, industry practitioners, and academics with a pragmatic approach to the peculiarities of large ports around the world. Using quantitative measures as well as holistic and cultural considerations, the manual describes the general workings of the container port and shipping industry and provides in-depth case studies of ports in Southeast Asia, the Pearl River Delta, the Yangtze River Delta, and Northwest Europe.

Supply Chain Risk Mitigation Elsevier

Global logistics entails tradeoffs in facility location, distribution networks, the routing and scheduling of deliveries by different modes of travel (e.g., air, water, truck, rail), procurement, and the overall management of international supply chains. In an increasingly global economy, then, logistics has become a very important matter in the success or failure of an organization. It is an integral part of supply chain management that involves not just operations management considerations, but production engineering and regional science issues as well. As Director of the prestigious Waterloo Management of Integrated Manufacturing Systems Research Group (WATMIMS), which specializes in logistics and manufacturing, Jim Bookbinder is

uniquely qualified to edit a handbook on global logistics. He has aligned a set of prominent contributors for this volume. The chapters in the Handbook are organized into discrete sections that examine modes; logistics in particular countries; operations within a free-trade zone; innovative features impacting international logistics; case studies of specific companies; and a look toward the future. Contributors are from the Americas, Europe, and Asia, and they push the state of the art in areas such as trade vs. security; border issues; cabotage within NAFTA; Green logistics corridors within the EU; inland ports; direct-to-store considerations; and all the questions that need to be confronted in any given region. This will certainly appeal to researchers and practitioners alike, and could serve as required or supplementary reading in graduate-level logistics courses as well.

ITF Round Tables Port Investment and Container Shipping Markets Food & Agriculture Org.

Global Liner Shipping is undergoing the largest transformation since the invention of the container itself. The core business models and business cultures which made the shipping lines successful are now failing. The coming decade will see the emergence of new business models suited for a new environment. This transformation is a source of significant opportunity for industry stakeholders, but equally a source of grave risk should existing companies fail to adapt accordingly. This book provides a foundation for industry stakeholders to understand the trends impacting the industry, allowing them to identify the right questions to ask in order to not only survive, but thrive towards 2025. *Review of Maritime Transport 2018* Martinus Nijhoff Publishers

Placing special emphasis on the significant security issues associated with modern container international transport, this book provides in-depth exploration of both United States and European Union port and shipping policy, alongside that of wider international trade. The authors take an original and topical look at the security initiatives introduced by the USA and their impact in the EU. Based on original research by renowned experts in the field, this book provides vital insight for academics, government policy-makers and practitioners.

How Much Does Policy Matter? Springer
Intermodal Maritime Security: Supply Chain Risk Mitigation offers every stakeholder involved in international transactions the tools needed to assess the essential risks, threats and vulnerabilities within the global supply chain. The book examines the role intermodal maritime transportation plays in global security, surveying its critical policies, procedures, operations, infrastructure and systems. Linking new technological standards with intermodal operations, this book provides the foundational knowledge readers need, including transportation and maritime trade students, researchers, practitioners and regulatory agencies. Blends academic knowledge with real-world experiences Drawn from subject matter experts in academia, importers and exporters, transportation firms, and trade intermediaries Breadth of multidisciplinary coverage from maritime supply chains, port and maritime operations, as well as cyber and physical security

2020–2025 Kogan Page Publishers
 "Marc Levinson offers a brief history of globalization through the stories of the fascinating people and companies that built global supply chains. In *Small World* he will follow the thread of the balance between people in the private sector pursuing new ways to make goods and do business and governments eliminating barriers. These two spheres—the private sector and government—did not go global in tandem, and many developments in one sphere were far more impactful in the other than imagined at the time. The book will narrate the development of global supply chains in response to trends in both, telling stories ranging from a Prussian-born trader in New Jersey in the 1760s who dreamed of building a vertically-integrated metals empire, to new megaships too big to call on most of the world's ports leaving half empty, as globalization entered a new stage in its history around 2006. Bringing the story up to the present, Levinson engagingly illustrates how we're not experiencing the end of globalization, only its transformation. As one type of globalization is declining, a new one is on the rise"--

9th International Conference, ICCL 2018, Vietri sul Mare, Italy, October 1-3, 2018, Proceedings UN

The Review of Maritime Transport is an UNCTAD flagship publication, published annually since 1968. It provides an analysis of structural and cyclical changes affecting seaborne trade, ports and shipping, as well as an extensive collection of statistical information. The present edition of the Review of Maritime Transport takes the view that the long-term growth prospects for seaborne trade and maritime businesses are positive, with ample opportunities for

developing countries to generate income and employment and help promote foreign trade.

Transportation in International Supply Chains Open Book Publishers

Whilst the maritime container business has been studied in depth, the impact on shippers and how shippers deal with the given challenges has not been fully examined. *Container Logistics* bridges this gap and looks at the maritime business from a customer's perspective. The book examines the challenges, solutions and the latest developments in the container industry as well as the interaction between the different actors involved, such as freight forwarders, supply chain managers and shippers. Current hot topics from the supply chain and the maritime business perspective are included. From the supply chain perspective, *Container Logistics* covers areas such as the purchase of transportation services from ocean carriers and transport management, to effective and efficient logistics execution. From the maritime business perspective, the book covers topics such as intermodal freight optimisation and hinterland transportation, and terminal and port optimisation. With the inclusion of clear examples of best practice and bona fide case studies, as well as invaluable contributions from an international team of experts, *Container Logistics* is an essential guide for supply chain managers and shippers, as well as academics and industry professionals working in the maritime business. Online supporting resources include images from the book and chapter summaries.

From Entrepreneurs and Kings to Modern Efficiency Cambridge University Press
 This report examines the issues that need to be considered before the decision to proceed to costly expansions

with long-life spans and a structural influence on the local and national economy. The report benefits from a case study of Chile.

Essays in Honor of Elisabeth Mann

Borgese (1918-2002) OECD Publishing

The classic *Business of Shipping* (now in its ninth edition) remains North America's most comprehensive industry-focused book that explains and analyzes marine transportation and related industries, both domestic and international. This is an authoritative

text that is required reading for a newcomer looking to understand basic shipping operations, regulations, and international cargo movement, or a specialized professional seeking insight into other industry segments. Revised and fully updated, the ninth edition reaffirms its status as the cornerstone text in marine transportation education. *Dynamics in Logistics* Cornell Maritime Press/Tidewater Publishers Introduces the global liner shipping industry and gives clear guidelines for dealing with challenges and disruptions.
