Cable-driven robots (CDRs) are a special class of parallel mechanisms in which the end-effector is actuated by cables, instead of rigid-linked actuators. They are characterized by lightweight structures with low moving inertia and large workspace, due to the location of the cable winching actuators at the fixed base of the structure, and thereby reducing the mass and inertia of the moving platform.

### Table of Contents: Cable-driven parallel robots

Over the past decade, cable-driven parallel mechanisms have been used for several purposes. In this paper, a novel application is proposed, namely, using two 6DOF cable-driven parallel mechanisms sharing a common workspace to obtain the mechanical base for the design of a locomotion interface.

### Wrench-Feasible Workspace of Mobile Cable-Driven Parallel ...

Cable Driven Parallel Robots whose workspace can be further increased by the modification of their geometric architecture are known as Reconfigurable Cable Driven Parallel Robots. A novel concept of Reconfigurable Cable Driven Parallel Robots that consists of a classical Cable-Driven Parallel Robot mounted on multiple Mobile Bases is known as Mobile CDPR.

### Determination of the Dynamic Workspace of Cable-Driven ...

Direct kinematics (DK) of cable-driven parallel robots (CDPR) based only on cable lengths measurements is a complex issue even with ideal cables and consequently even harder for more realistic ...

Validation of 3-D dynamic trajectories for a 3-DOF cable driven parallel mechanism by Laboratoire de robotique de l'université Laval / Laval University Robotics Laboratory 1:30

### A Review on Cable-driven Parallel Robots | Chinese Journal ...

concept of cable-driven parallel mechanisms — also referred to as wire-driven parallel mechanisms or tendon-driven parallel mechanisms —

introduced in [7,8]. Cables are flexible members that can support very large tensile loads per unit weight. Compared to struts, they represent an even more effective use of materials which explains why they have been employed in construction and in machines since antiquity [9].
