Accolades for Exodus: "Wow! I was truly impressed by this book. I love when science fiction writers combine science, politics and psychology. For me the mix was just right" "This book is science fiction in great form. It doesn't just make you think about the future, it really makes you think about the world around you today" When mankind faces extinction, how can anyone survive? In 2072, Earth faces the ultimate extinction event. In an America turned authoritarian, a race against time begins. To send a starship to a distant planet, where the remains of humanity can survive. Only a small number will be chosen for this final endeavor to save mankind from extinction, and among the contenders only the most resourceful will have a chance. But while the government wants to choose loyal subjects in order to create another version of the society they have engineered, there are those who secretly conspire to let the starfarers choose their own destiny, free from the bonds of their mother world. As mankind on Earth faces its final blow, the selected few set course

for Aurora, more than 40 light years away! Follow Tina Hammer, scramjet pilot and officer, Kenneth Taylor, Harvard professor and alienated by the nation he once held so dear, Maria Solis, daughter to one of the richest men in the world, a girl who would never have been chosen, except for her dad's money, on their various paths toward the greatest adventure in human history. "A race through the end of the Earth - excellent SF" "Very well written and reads fast and easy in the style of other great sci fi writers such as Randolph Lalonde and Jack Campbell" *Breakers* Springer Science & Business Media
 Following his last adventure, Trevor "Lex" Alexander's life has managed to return to normal. He's back to splitting his time between delivering packages and transporting passengers, along with the occasional foray into testing highly experimental equipment. He's even gotten back together with his girlfriend Michella Modane, who has been launched to stardom by her coverage of the Bypass Gemini incident. Yes, things are going quite well for Lex. But in his life, luck like this never lasts long. Sure enough, while he is preparing for a rare visit from Michella, he receives word that the reclusive inventor Karter Dee has been kidnapped. The eccentric and slightly deranged inventor's checkered past has made getting the authorities involved out of

the question. That has left "Ma", the AI in charge of cooking his meals and reining in his insanity, with few options. She has reached out to Lex as one of the few people she can trust, and needs him to help assemble a team of Karter's former allies to take him back before his latest contraptions can be put to work terrorizing the populace at the hands of his captors.

Eradicating Human Trafficking: Culture, Law and Policy

World Health Organization

With over 40 million people still enslaved around the world, this book takes a closer look at the role of culture in society and how certain practices, beliefs or behaviors are fuelling human trafficking beyond what the law can curtail.

7th Italian Research Conference, IRCDL 2011, Pisa, Italy, January 20-21, 2011. Revised Papers Reaper Press

Time-activity diaries kept by members of the general public indicate that on average people spend around 90% of their time indoors, this is associated with considerable exposure to air pollutants as not only is there infiltration of pollutants from outdoors, there are also emissions indoors that can lead to elevated pollutant concentrations. Despite this, and the fact that the WHO produces air quality guidelines for indoor air, the only statutory requirements for monitoring of airborne pollutant concentrations relate to the outdoor environment. Given its importance as a source of air pollution exposure, increasing attention is being given to pollution of the indoor environment. This volume considers both chemical and biological pollutants in the indoor atmosphere from their sources to chemical and physical transformations, human exposure and potential effects on human health. It is a valuable reference for those working in environmental policy, civil and environmental engineering as well as for atmospheric chemists.

ABC's for Boys Harper Collins

In this paperback edition is a foreword by activist and author John Robbins and a reader's group study guide. This ground-breaking work, voted one of the top ten books of 2010 by VegNews Magazine, offers an absorbing look at why and how humans can so wholeheartedly devote ourselves to certain animals and then allow others to suffer needlessly, especially those slaughtered for our consumption. Social psychologist Melanie Joy explores the many ways we numb ourselves and disconnect from our natural empathy for farmed animals. She coins the term "carnism" to describe the belief system that has conditioned us to eat certain animals and not others. In *Why We Love Dogs, Eat Pigs, and Wear Cows* Joy investigates factory farming, exposing how cruelly the animals are treated, the hazards that meatpacking workers face, and the environmental impact of raising 10 billion animals for food each year. Controversial and challenging, this book will change the way you think about food forever.

Pollution Havens and Foreign Direct Investment Seven Stories Press

The World Drug Report 2005 provides one of the most comprehensive overviews of illicit drug trends at the international level. In addition, this year it presents the work of UNODC in two new areas of research: an estimate of the financial value of the world drug market, and the preliminary steps towards the creation of an illicit drug index. The analysis of trends, some going back 10 years or more, is presented in Volume 1. Detailed statistics are presented in Volume 2. Taken together these volumes provide the most up to date view of today's illicit drug situation.

World Drug Report 2005 Joseph R. Lallo

BOOK ONE of Plague Wars - read it or the FREE prequel, The Eden

Plague (Book Zero) as your introduction to this gripping futuristic thriller series. "Everything needed for a great story is right here in its pages... The novel's a fast-paced read that raises the questions we've come to expect from near future thrillers, but it has a freshness and a vigor -- and dare I say it -- a moral compass that isn't as common as with others of its ilk." - Charles de Lint: Books to Look For, Fantasy and Science Fiction Magazine (July/August 2014) When US Marine Sergeant Jill Repeth's blown-off legs begin to regenerate, she thinks it's a medical miracle. But the breakthrough that heals her war injuries is exactly what the government desperately wants to quash - by any means necessary. Hunted, she must cross an America wracked by strife to try to find a family who may already be dead, searching for the inhuman secret of what started it all. Reaper's Run is an origins story and apocalyptic novel, the beginning of one warrior's journey from tactical cop to freedom fighter and beyond. It leads the reader into the acclaimed Plague Wars futuristic thriller series. Keywords: action adventure thriller, Genetic Engineering, gene fiction, Military Science Fiction, women heroes, women's adventure fiction, post apocalyptic survival fiction no zombies, military thrillers, science fiction adventure, strong female character, thriller, Humvee, assault rifle

Communication for Rural Innovation Delacorte Press

The twentieth century witnessed an era of unprecedented, large-scale, anthropogenic changes to the natural environment. Understanding how environmental factors directly and indirectly affect the emergence and spread of infectious disease has assumed global importance for life on this planet. While the causal links between environmental change and disease emergence are complex, progress in understanding these links, as well as how their impacts may vary across space and time, will require transdisciplinary, transnational, collaborative research. This research may draw upon the expertise, tools, and approaches from a variety of disciplines. Such research may inform improvements in global readiness and capacity for surveillance, detection, and response to emerging microbial threats to plant, animal, and human health. The Influence of Global Environmental Change on Infectious Disease Dynamics is the summary of a workshop hosted by the Institute of Medicine Forum on Microbial Threats in September 2013 to explore the scientific and policy implications of the impacts of global environmental change on infectious disease emergence, establishment, and spread. This report examines the observed and potential influence of environmental factors, acting both individually and in synergy, on infectious disease dynamics. The report considers a range of approaches to improve global readiness and capacity for surveillance, detection, and response to emerging microbial threats to plant, animal, and human health in the face of ongoing global environmental change.

War Surgery Chanda Hahn

An expanded and updated edition of the 2002 book that has become required reading for policymakers, students, and active citizens.

The Making of the Atomic Bomb National Academies Press

This comprehensive, interdisciplinary handbook provides an overview of the field of intellectual and developmental disabilities as well as up-to-date material on diagnosis, assessment, interventions, treatment, and lifespan issues.

Rethinking Agricultural Extension Springer Science & Business Media

The term "Peak Oil" was born in January 2001 when Colin Campbell formed the Association for the Study of Peak Oil & Gas (ASPO). Now, Peak Oil is used thousands of times a day by journalists, politicians, industry leaders, economists, scientists and countless others around the globe. Peak Oil is not the end of

oil but it tells us the end is in sight. Anyone interested in food production, economic growth, climate change or global security needs to understand this new reality. In *Peeking at Peak Oil* Professor Kjell Aleklett, President of ASPO International and head of the world's leading research group on Peak Oil, describes the decade-long journey of Peak Oil from extremist fringe theory to today's accepted fact: Global oil production is entering terminal decline. He explains everything you need to know about Peak Oil and its world-changing consequences from an insider's perspective. In simple steps, Kjell tells us how oil is formed, discovered and produced. He uses science to reveal the errors and deceit of national and international oil authorities, companies and governments too terrified to admit the truth. He describes his personal involvement in the intrigues of the past decade. What happens when a handful of giant oil fields containing two thirds of our planet's oil become depleted? Will major oil consumers such as the EU and US face rationing within a decade? Will oil producing nations conserve their own oil when they realize that no one can export oil to them in the future? Does Peak Oil mean Peak Economic Growth? If you want to know the real story about energy today and what the future has in store, then you need to be "Peeking at Peak Oil".

New York State Government Yale University Press

This book constitutes the thoroughly refereed proceedings of the 7th Italian Research Conference on Digital Libraries held in Pisa, Italy, in January 2011. The 20 revised full papers presented were carefully reviewed and cover topics of interest such as system interoperability and data integration; formal and methodological foundations of digital libraries; semantic web and linked data for digital libraries; multilingual information access; digital library infrastructures; metadata creation and management; search engines for digital library systems; evaluation and log data; handling audio/visual and non-traditional objects; user interfaces and visualization; digital library quality.

Management of Ectopic Pregnancy SUNY Press

This volume covers both the medical and surgical management of ectopic pregnancy. It provides the practitioner and trainee with both the diagnostic information and the therapeutic information that will help them treat this problem, which remains a leading cause of maternal mortality. This volume includes practical advice on treating ectopic pregnancy and provides clinical management tips that will help every practitioner and trainee.

2nd Edition John Wiley & Sons

An alphabet book with hand drawn illustrations for boys.

Children & Youth Version : ICF-CY. Simon and Schuster

There is a distinct hint of Armageddon in the air. According to The Nice and Accurate Prophecies of Agnes Nutter, Witch (recorded, thankfully, in 1655, before she blew up her entire village and all its inhabitants, who had gathered to watch her burn), the world will end on a Saturday. Next Saturday, in fact. So the armies of Good and Evil are amassing, the Four Bikers of the Apocalypse are revving up their mighty hogs and hitting the road, and the world's last two remaining witch-finders are getting ready to fight the good fight, armed with awkwardly antiquated instructions and stick pins. Atlantis is rising, frogs are falling, tempers are flaring. . . . Right. Everything appears to be going according to Divine Plan. Except that a somewhat fussy angel and a fast-living demon -- each of whom has lived among Earth's mortals for many millennia and has grown rather fond of the lifestyle -- are not particularly looking forward to the coming Rapture. If Crowley and Aziraphale are going to stop it from happening, they've got to find and kill the Antichrist (which is a shame, as he's a really nice kid). There's just one glitch: someone seems to have misplaced him. . . . First published in 1990, Neil Gaiman and Terry Pratchett's brilliantly dark and screamingly funny take on

humankind's final judgment is back -- and just in time -- in a new hardcover edition (which includes an introduction by the authors, comments by each about the other, and answers to some still-burning questions about their wildly popular collaborative effort) that the devout and the damned alike will surely cherish until the end of all things.

Isurium Brigantum World Bank Publications

Kisspeptin has been shown to be both necessary and sufficient for activation of the reproductive axis, during puberty and later in adulthood. This makes kisspeptin a fundamental component of the reproductive axis. Kisspeptin has been deemed the single most potent stimulator of GnRH neurons yet known. The importance of kisspeptin has been documented in humans as well as non-human animal models, ranging from monkeys, sheep, and rodents to numerous fish species, thus signifying a highly conserved nature of its reproductive function. Importantly, kisspeptin neurons seem to mediate many of the regulatory effects of other signals, whether they are metabolic, circadian, hormonal, or stress. This places kisspeptin neurons in a unique position to be key nodal points and conduits for conveying numerous endogenous and exogenous signals to the reproductive axis.

An Introduction to Carnism National Academies Press

Travis Maddox, Eastern University's playboy, makes a bet with good girl Abby that if he loses, he will remain abstinent for a month, but if he wins, Abby must live in his apartment for the same amount of time.

One hundred years have passed since the birth of Baby's miraculous offspring, Echo. The United States has evolved to a point of politically driven economic collapse. An abused mother escapes with her two sickly children, Scotty and Abby, from the tenements of Short Hills to the farmland of Sussex County. There she unites with a Latino family who has provided a loving home to Jose, a young Costa Rican boy who has been traumatized by murder and kidnap. The two families find themselves the subject of the psychotic attention of Armoni, a soul damaged beyond redemption, as their lives become entwined with Echo's, who is intent on thwarting the efforts of the heinous people who prey on the lives of other creatures. And as the insidious miscreant, Armoni, tracks them down, bringing brutality and violence to all, Netty recruits a heartbroken Abby to mount a mission to rescue the wildlife of Earth before despicable events bring on the spectre of Armageddon. Echo is the second book in the Alien Species Intervention #6609, an alien apocalyptic saga spanning 200 years from the Prohibition to the distant future. It encompasses tender love between divergent species, political downfalls and acts of unspeakable violence. When you think you've figured it out . . . WHAM! You won't see it coming. Thriller, horror, science fiction and fantasy all in one, the series is a gripping psychological exploration of how the inherent greed and evil of man is dooming planet Earth and its inhabitants. Warning: Alien

Species Intervention #6609 contains violence that a sensitive reader may find confronting. Communication for Rural Innovation Rethinking Agricultural Extension
A major re-examination of a key northern town in Roman Britain, providing new information about its topography and its development and that of its later landscape.
Unstable Prototypes John Wiley & Sons

In a distant future, Trevor "Lex" Alexander was shaping up to be the next great race pilot until a fixed race got him banned from the sport. Reduced to making freelance deliveries, he thinks his life can't get any worse. That's when a package manages to get him mixed up with mobsters, a megacorp, and a mad scientist. Now his life depends on learning what their plans are, and how he can stop them.
