 Something wicked is at work in Colorado's supernatural community. Vampires are being paralyzed or killed with poison a weapon favored by witches. This offense threatens to break apart the already-fractured alliance between witches and the undead. The state's cardinal vampire, Maven, summons boundary witch Allison Lex Luther to stop the killing before it ignites a war. Lex has barely started investigating when she gets another surprise: the biological father she's never met arrives on her doorstep. He has answers to all of Lex's questions about her bloodline, but getting those answers could mean betraying the life she's already built. Then the next vampire is poisoned and this time it's Maven herself. The new evil that hunts Lex is powerful and ruthless enough to stop the strongest supernatural creature in the state. In order to find such a killer, Lex will have to face down her own birthright and call on every ally both living and dead."

 A complete practical system for improving your memory with a unique journey map and 50 flash cards packed with tips, techniques and mind-expanding tests In this highly original publishing

package Dominic O'Brien reveals the secrets of mastering the art of memory and provides us with a basic tool kit for boosting our skills of memorization and recall. The kit consists of three components: a 88-page introduction to memory techniques that reveals the what, the why and the how of Dominic's proven methods; a pictorial memory journey map to be used in conjunction with the Journey Method, a basic and highly versatile memorization procedure that exploits the power of mental association to provide unforgettable cues for recall; and, lastly, a deck of 50 flash cards providing tips and techniques (and self-testing exercises) on one side, and, on the other, numbers and drawn objects to practise on, using the journey map or other tricks of the trade described in the book. The key to improving your memory is two-fold: knowing the expert methods devised by one of the most retentive and focused brains in the world, and practising them until you see marked improvements in your performance. This toolkit is all you will need to train yourself to be a memory maestro.

How to develop a perfect memory Humanoids, Incorporated
 From acclaimed Israeli author Batya Gur, the fifth installment in the Michael Ohayan mystery series set in a politically charged Arab quarter south of West Jerusalem The body of a young

woman with her face smashed in is discovered in the attic of a house on Bethlehem Street, in the Baka neighborhood of Jerusalem. Chief Superintendent Michael Ohayon is called to the scene of the crime where, beyond the usual horror, an old love and an unfinished romance await him. As in her previous novels, Batya Gur has spun a complex and fascinating murder investigation that serves as a means for entering a closed world with rules and a logic of its own. But here, the closed world is a Jerusalem neighborhood that enfolds the entire Israeli experience in miniature. Gur wonderfully draws the fissures in this complex world and makes it, like the murder investigation, worthy of further examination. The criminal investigation is set against the background of tensions between Ashkenazis and Mizrahis, hostility between Jews and Arabs, the affair of the kidnapped Yemenite children of the 1950s, and the al Aqsa Intifada in 2000.

Master the art of multi-axis spindle turning! This book offers a strategy for understanding multi-axis turning and the many options available to create unique forms. Dill, a self-professed "experimental turner," takes readers step by step through this complex area of turning. Working in multiple axes on a spindle can be confusing, but as Dill teaches the "hows" of turning spindles as systematic building blocks for future work, turners can finally make this skill their own. Hundreds of photos and diagrams offer detailed guidance, and explain the variables--axis placement, profile, orientation of the new axis to the center axis, and so on--and how they apply to each "quadrant" of multi-axis work. Split and termed turning methods, planning tips, tricks of the trade, and a three-sided cup or vase project help you succeed. Concepts come to life as Dill shows examples of not only her work, but the work of other expert turners.

Common Core Stanford University Press

Intended for first-year graduate courses in heat transfer, this volume includes topics relevant to chemical and nuclear engineering and aerospace engineering. The systematic and comprehensive treatment employs modern mathematical methods of solving problems in heat conduction and diffusion. Starting with precise coverage of heat flux as a vector, derivation of the conduction equations, integral-transform technique, and coordinate transformations, the text advances to problem characteristics peculiar to Cartesian, cylindrical, and spherical coordinates; application of Duhamel's method; solution of heat-conduction problems; and the integral method of solution of nonlinear conduction problems. Additional topics include useful transformations in the solution of nonlinear boundary value problems of heat conduction; numerical techniques such as the finite differences and the Monte Carlo method; and anisotropic solids in relation to resistivity and conductivity tensors. Illustrative examples and problems amplify the text, which is supplemented by helpful appendices.

Fitting into the Old World isn't going very well for Boulder boundary witch Allison "Lex" Luther: she may have earned a place in a vampire's service, but now it seems as if every supernatural creature in town has found a reason to hate her. And when Lex and her partner are assigned to investigate the suspicious disappearance of two vampires during the night of the full moon, they find themselves with more questions than answers. Was it murder...or mutiny? The crusade for answers will lead Lex all over the Colorado Old World, from a prison cell for a broken werewolf to a haunted Denver brothel. And when Lex determines the responsible party, the hunt is just beginning: something has been awakened in Boulder, something as old and powerful as it is terrifying. Only the woman with death in her blood can stop what's coming.

At a benefit dinner, community activist Maria Cervantes overhears two men plotting a terrorist attack that could rock Miami to its core. But before she can alert authorities, she's almost killed in a massive explosion—and wakes up in a hospital with no memory of what happened. As the sole survivor of the attack, she is now a person of interest to the NSA—and especially to Agent Cade O'Reilly. Because Maria is the one woman Cade has never been able to forget. Years ago, they were closer than either was willing to admit—until Cade disappeared when Maria needed him most. Now he's sticking by her, whether she likes it or not. Because the memories locked inside her mind could hold vital clues to the next attack. Because terrorists want her dead—and because he never wants to let her go again.

The event known as the Boston Massacre is among the most familiar in U.S. history, yet one of the least understood. Eric Hinderaker revisits this dramatic episode, examining the facts of that fateful night, the competing narratives that molded public perceptions, and the long campaign to transform the tragedy into a touchstone of American identity.

How to Develop a Good Memory for Names, Faces and Facts The Rosen Publishing Group, Inc

'Fighting Scholars' offers the first book-length overview of the ethnographic study of martial arts and combat sports. The book's main claim is that such activities represent privileged grounds to

access different social dimensions, such as emotion, violence, pain, gender, ethnicity and religion. In order to explore these dimensions, the concept of 'habitus' is presented prominently as an epistemic remedy for the academic distant gaze of the effaced academic body. The book's most innovative features are its empirical focus and theoretical orientation. While ethnographic research is a widespread and popular approach within the social sciences, combat sports and martial arts have yet to be sufficiently interrogated from an ethnographic standpoint. The different contributions of this volume are aligned within the same project that began to crystallize in Loïc Wacquant's 'Body and Soul': the construction of a 'carnal sociology' that constitutes an exploration of the social world 'from' the body.

Cheap at Half the Price Batsford

Harry Lorayne, who has trained his own memory to the point where he is acclaimed as having the most phenomenal memory in the world, has written the most practical and lucid memory-training book ever. Now, at last, with the famous Lorayne Link-and-Peg System, readers will be able to recall faces, names, appointments and anything else they need to acquire a winning edge.

It has been twenty years since the Romans first occupied Britannia, and the rebellion by Boudica and her people nears its bloody climax. Now, as the Roman army marches on Mona, the last protected village in Britannia, the only hope for her nation lies with Boudica. With so much to lose—the very lives of her children and an entire culture on the verge of obliteration—Boudica must find a way to save her people. In doing so, she will change the face of history forever.
