The Practice of Primary Nursing: Relationship-Based, Resource-Driven Care Delivery updates on where Primary Nursing fits in today's health care climate. Originally started at the University of Minnesota Hospitals in 1968, Primary Nursing has been used by many hospitals in the U.S., Canada, and the World. This new edition thoroughly explains the four important operating elements of Primary Nursing and outlines the actual steps taken at the unit level for successful implementation. Today's hospital

needs the type of relationship-based care delivery that Primary Nursing provides. Winner of the 2002 American Journal of Nursing Book of the Year Award!

In this "unexpected delight,"\* filmmaker David Lynch describes his personal methods of capturing and working with ideas, and the immense creative benefits he has experienced from the practice of meditation. Now in a beautiful paperback edition, David Lynch's *Catching the Big Fish* provides a rare window into the internationally acclaimed filmmaker's methods as an artist, his personal working style, and the immense creative benefits he has experienced from the practice of meditation. *Catching the Big Fish* comes as a revelation to the legion of fans who have

longed to better understand Lynch's personal vision. And it is equally compelling to those who wonder how they can nurture their own creativity. Catching Ideas Ideas are like fish. If you want to catch little fish, you can stay in the shallow water. But if you want to catch the big fish, you've got to go deeper. Down deep, the fish are more powerful and more pure. They're huge and abstract. And they're very beautiful. I look for a certain kind of fish that is important to me, one that can translate to cinema. But there are all kinds of fish swimming down there. There are fish for business, fish for sports. There are fish for everything.

Everything, anything that is a thing, comes up from the deepest level. Modern physics calls that level the Unified Field. The more your consciousness-your awareness-is expanded, the deeper you go toward this source, and the bigger the fish you can catch. -- from *Catching the Big Fish*

This practical guide contains seven modules targeted at district and health facility staff. It intends to meet the demands to improve immunization services so as to reach more infants in a sustainable way, building upon the experiences of polio eradication. It includes materials adapted from polio on planning, monitoring and use of data to improve the service, that can be used at any level. Revising the manual has been a team exercise. There are contributions from a large number of experts, organizations and institutions. This new edition has seven modules. Several new vaccines that have become more readily available and used in recent years have been added. Also the section on integration with other health interventions has been expanded as exciting opportunities and experiences have

become evident in the years following the previous edition.

Module 1: Target diseases and vaccines Module 2: The vaccine cold chain Module 3: Ensuring safe injections Module 4: Microplanning for reaching every community Module 5: Managing an immunization session Module 6: Monitoring and surveillance Module 7: Partnering with communities.

"As in the first edition, the author has done a magnificent job compiling these instruments and providing important information that the reader can use to evaluate their usefulness." --Ora Lea Strickland, RN, PhD, FAAN (From the Foreword) This book provides all the essential research tools for assessing and measuring caring for those in the caring professions. Watson's text is the only comprehensive and accessible collection of instruments for care measurement in clinical and educational nursing research. The measurements address quality of care, patient, client, and nurse perceptions of caring, and caring behaviors, abilities, and efficacy. Newly updated, this edition also contains three new chapters, which document the most effective caring language and provide innovative methods of selecting appropriate tools for measurement based on validity and reliability. Key features of new edition: A chapter providing a comprehensive literature review of the research and measurement of caring A chapter entitled "Caring Factor Survey," which presents a new scale based on Watson's original theory of human caring Chapters outlining instruments for care measurement, including Holistic Caring Inventory, Peer Group Caring Interaction Scale, and many more New instruments focused on assessing caring at the administrative-relational

caring level An updated section dedicated to challenges and future directions of the measurement of caring

Evil is not confined to war or to circumstances in which people are acting under extreme duress. Today it more frequently reveals itself in the everyday insensitivity to the suffering of others, in the inability or refusal to understand them and in the casual turning away of one's ethical gaze. Evil and moral blindness lurk in what we take as normality and in the triviality and banality of everyday life, and not just in the abnormal and exceptional cases. The distinctive kind of moral blindness that characterizes our societies is brilliantly analysed by Zygmunt Bauman and Leonidas Donskis through the concept of *adiaphora*: the placing of certain acts or categories of human beings outside of the universe of moral obligations and evaluations. *Adiaphora* implies an attitude of indifference to what is happening in the world – a moral numbness. In a life where rhythms are dictated by ratings wars and box-office returns, where people are preoccupied with the latest gadgets and forms of gossip, in our 'hurried life' where attention rarely has time to settle on any issue of importance, we are at serious risk of losing our sensitivity to the plight of the other. Only celebrities or media stars can expect to be noticed in a society stuffed with sensational, valueless information. This probing inquiry into the fate of our moral sensibilities will be of great interest to anyone concerned with the most profound changes that are silently shaping the lives of everyone in our contemporary liquid-modern world.

For many health care professionals and social service providers, the hardest part of the job is breaking bad news. The news may be about a condition that is life-threatening (such as cancer or AIDS), disabling (such as multiple sclerosis or rheumatoid arthritis), or embarrassing (such as genital herpes). To date medical education has done little to train practitioners in coping with such situations. With this guide Robert Buckman and Yvonne Kason provide help. Using plain, intelligible language they outline the basic principles of breaking bad news and present a technique, or protocol, that can be easily learned. It draws on listening and interviewing skills that consider such factors as how much the patient knows and/or wants to know; how to identify the patient's agenda and understanding, and how to respond to his or her feelings about the information. They also discuss reactions of family and friends and of other members of the health care team. Based on Buckman's award-winning training videos and Kason's courses on interviewing skills for medical students, this volume is an indispensable aid for doctors, nurses, psychotherapists, social workers, and all those in related fields.

Die Beiträge der Aufsatzsammlung versuchen auf theoretischer und auch auf praktischer Ebene das Konzept des "caring" (Care = umfassende oder auch ganzheitliche Pflege im Gegensatz zur medizinischen Assistenz) als notwendigen Bestandteil der Krankenpflege zu etablieren. Im Vordergrund stehen dabei kulturell differente Ansätze der umfassenden Pflege.

**Synergy for Clinical Excellence** World Health Organization  
In The School Reform Landscape: Fear, Mythologies, and Lies, the

authors take an in-depth and controversial look at school reform since the launch of Sputnik. They scrutinize school reform events, proposals, and policies from the last 60 years through the lens of critical social theory and examine the ongoing tensions between the need to keep a vibrant unitary system of public education and the ongoing assault by corporate and elite interests in creating a dual system. Some of events, proposals, and policies critiqued include the Sputnik myth, A Nation At Risk, No Child Left Behind, the lies of the Common Core State Standards Initiative, and other common reform schemes. The authors provide an evidence-based contrarian view of the free-market reform ideas and pierce the veil of the new reform policies to find that they are built not upon empirical evidence, but instead rest solidly on foundations of myth, fear, and lies. Ideas for a new set of reform policies, based on empirical evidence and supportive of a unitary, democratic system of education are presented.

Nurses who conduct research have a longstanding interest in questions of nursing knowledge. Nursing Knowledge is a clear and well-informed exposition of the philosophical background to nursing theory and research. Nursing Knowledge answers such fundamental questions as: How is nursing theory related to nursing practice? What are the core elements of nursing knowledge? What makes nursing research distinctive as nursing research? It examines the history of the philosophical debates within nursing, critiques the arguments, explains the implications and sets out to rethink the philosophical foundation of nursing

science. Nursing Knowledge begins with philosophical problems that arise within nursing science. It then considers various solutions with the help of philosophical ideas arguing that nurses ought to adopt certain philosophical positions because they are the best solutions to the problems that nurses encounter. The book argues claims that the nursing standpoint has the potential to disclose a more complete understanding of human health than the common disease-and-dysfunction views. Because of the relationship to practice, nursing science may freely draw theory from other disciplines and nursing practice unifies nursing research. By redefining theory and philosophy, With a new philosophical perspective on nursing science, the so-called relevance gap between nursing theory and practice can be closed. The final chapter of the book 'redraws the map', to create a new picture of nursing science based on the following principles: Problems of practice should guide nursing research Practice and theory are dynamically related Theory research must provide the knowledge base necessary for nurse interventions, training, patient education, etc. Nursing research should develop midrange theories and its results are nursing theory is strengthened when it uses theories confirmed by is integrated with other disciplines Key features Clear and accessibly written Accurate and philosophically well-informed, Discusses philosophical problems in contexts familiar to nurses Systematically examines the philosophical issues involved in nursing research Examines epistemology (how we know what we know), theory development, and the philosophical foundations of scientific methodology. Develops a new model of nursing knowledge Dr. Mark Risjord is Associate Professor in Philosophy

at Emory University, and has a faculty appointment in the Nell Hodgson Woodruff School of Nursing. His main research areas have been in the philosophy of social science and the philosophy of medicine. He has been teaching philosophy of science and theory development in the new PhD program in the Nell Hodgson School of Nursing at Emory University insince 1999. He has been awarded two competitive teaching prizes: Emory Williams Distinguished Teaching Award (2004) and the Excellence in Teaching Award (1997). He is presently serving as the Masse-Martin/NEH Distinguished Teaching Chair (2006-2010).

*Cancer-Related Breakthrough Pain* Maggioli Editore  
Nursing has been described as the most 'natural' female occupation of all, embodying the so-called feminine ideals of tenderness and caring. Yet these ideals are juxtaposed with images of nurses as sex objects, or as ruthlessly efficient harridans. How have these very different images been constructed? And how do they relate to the reality of nursing - the close contact with blood, urine and faeces, and the involvement with the rites of birth, illness and death? This book, first published in 1991, explores the alternative ways different societies have developed to reconcile these contradictions. Using contemporary, historical and cross-cultural case material, the contributors trace the historical development of the role, and investigate the expected qualities of nurses within different cultural settings, such as India, Uganda and Japan. They look closely at 'the nurse' as a social construct, and demonstrate how

the stereotypes relate to a particular society's notions of gender. Designed primarily for anthropologists and sociologists interested in health, illness and systems of health care, this book challenges some of the myths of traditional nursing studies and provides an original perspective on doctor/nurse/patient relationships.
