CCH Business Valuation Guide John Wiley & Sons
 This new Guide has been developed by AICPA staff and the Equity Securities Task Force and is the first in a series of 3 NEW AICPA Accounting Valuation Guides to be released. This long anticipated release reflects best practices developed over the previous decade. Since the issuance of FASB ASC 718 and 505-50 in 2004, valuing stock-based compensation ("cheap stock") has been a significant challenge for private companies. This New Guide has been designed to mitigate those challenges. It brings you practical guidance and illustrations related to accounting, disclosures and valuation of privately held company equity securities issued as compensation. This guide includes:
 Evaluating private and secondary market transactions — What should companies do when transaction activity doesn't match their estimates of value? Adjustments for control and marketability — How should companies think about the value of the enterprise for the purpose of valuing minority securities?
 When is it appropriate to apply a discount for lack of

marketability, and how should the estimated discount be supported? Highly leveraged entities — How should companies incorporate the fair value of debt in the valuation of equity securities? What is the impact of leverage on the expected volatility of various securities? The relevance of ASC 820 (SFAS 157) to cheap stock issues Updated guidance and illustrations regarding the valuation of, and disclosures related to, privately held company equity securities issued as compensation This Guide also provides expanded and more robust valuation material to reflect advances in the theory and practice of valuation since 2004. This edition includes guidance from FASB ASC 718, 505-50, 820-10 and SSVS 1 which were all issued since the last AICPA guidance dedicated to this issue.

This book presents the main valuation approaches that can be used to value financial institutions. By sketching 1) the different business models of banks (both commercial and investment banks) and insurance companies (life, property and casualty and reinsurance); 2) the structure and peculiarities of financial institutions' reporting and financial statements; and 3) the main features of regulatory capital frameworks for banking and insurance (ie Basel III, Solvency II), the book addresses why such elements make the valuation of financial institutions different from the valuation of non-financial companies. The book then features the valuation models that can be used to determine the value of banks and insurance companies including the Discounted Cash Flow, Dividend Discount Model, and Residual Income Model (with the appropriate estimation techniques for the cost of capital and cash flow in financial industries). The main techniques to perform the relative valuation of financial institutions are then presented: along the traditional multiples (P/E, P/BV, P/TBV, P/NAV), the multiples based on industry-specific value drivers are discussed (for example, P/Pre Provision Profit, P/Deposits, P/Premiums, P/Number of branches). Further valuation tools such as the "Value Maps" or the "Warranted Equity Method" will be explained and discussed. The closing section of the book will briefly focus on the valuation of specific financial companies/vehicles such as closed-end funds, private equity funds, leasing companies, etc.
