MIT Press
With increasing water scarcity, pressure to re-allocate water from agriculture to other uses mounts, along with a need to put in place institutional

arrangements to promote 'higher value' uses of water. Many developing countries are now experimenting with establishing new institutional arrangements for managing water at the river basin level. This book, based on research by IWMI and others, reviews basin management in six developed and developing countries. It describes and applies a functional theory of river basin management, based on the idea that there is a minimum set of functions required to manage basins effectively and a set of basic conditions that enable effective management institutions to emerge. The book examines the experiences of both developed and developing countries in order to see what lessons can be learned and to identify what constitutes the core of a 'theory of river basin management'. It concludes that although it is difficult for developing countries to adopt approaches and institutional designs directly from developed countries, basic principles and lessons are transferable.

with ACCA means that our Study Texts, Practice & Revision Kits and iPass (for CBE papers only) are subject to a thorough ACCA examining team review. Our suite of study tools will provide you with all the accurate and up-to-date material you need for exam success.

ACCA P3 Business Analysis BPP Learning Media

An overview of the rapidly growing field of ant colony optimization

that describes theoretical findings, the major algorithms, and current applications. The complex social behaviors of ants have been much studied by science, and computer scientists are now finding that these behavior patterns can provide models for solving difficult combinatorial optimization problems. The attempt to develop algorithms inspired by one aspect of

ant behavior, the ability to find what computer scientists would call shortest paths, has become the field of ant colony optimization (ACO), the most successful and widely recognized algorithmic technique based on ant behavior. This book presents an overview of this rapidly growing field, from its theoretical inception to practical applications, including descriptions of

many available ACO algorithms and their uses. The book first describes the translation of observed ant behavior into working optimization algorithms. The ant colony metaheuristic is then introduced and viewed in the general context of combinatorial optimization. This is followed by a detailed description and guide to all major ACO algorithms and a report on current theoretical

findings. The book surveys ACO applications now in use, including routing, assignment, scheduling, subset, machine learning, and bioinformatics problems. AntNet, an ACO algorithm designed for the network routing problem, is described in detail. The authors conclude by summarizing the progress in the field and outlining future research directions. Each chapter

ends with bibliographic material, bullet points setting out important ideas covered in the chapter, and exercises. Ant Colony Optimization will be of interest to academic and industry researchers, graduate students, and practitioners who wish to learn how to implement ACO algorithms. *Practice and Revision Kit* Pen and Sword BPP Learning Media is an ACCA Approved

Resort Design

BPP Learning Media Lt.-Gen. Sir Garnet Wolseley commented that history would record the formation of the Volunteers Movement as one of the most remarkable events in the

century. In this study of the Rifle Volunteer Movement, the author Ian Beckett has drawn from a wide range of primary source material such as official, regimental, local and private repositories. He has been able to put into perspective the Movement within the structure of the Victorian and Edwardian social, political and military affairs from its formation in 1859 to its

absorption in the Territorial Force in 1908.

The Association of Chartered Certified Accountants (ACCA) is the global body for professional accountants.

With over 100 years of providing world-class accounting and finance qualifications, the ACCA has significantly raised its international profile in recent years

and now supports a BSc (Hons) in Applied Accounting and an MBA.BPP Learning Media is an ACCA Official Publisher. The new ACCA syllabus for paper P4 is about the practical application of financial theory to problems that managers face, such as investment appraisal, funding policies, risk management, growth, organic or through mergers and acquisitions

and dividend policy. The paper also covers crucial issues such as corporate governance and ethical and environmental aspects of financial policy. The practice and revision kit contains a large number of examination style questions by key topic and integrated where appropriate together with three mock examinations, one of which is the ACCA's pilot paper.BPP

This book provides a

systematic approach for the algorithmic formulation and implementation of mathematical operations in computer algebra programming languages.

The viewpoint is that mathematical expressions, represented by expression trees, are the data objects of computer algebra

programs, and by using a few primitive operations that analyze and *FRS 102* BPP Learning

Media examples are comprehensive and representative selection of the algorithms in these areas is also given. This book should prove invaluable as a reference for researchers and professional programmers, as well as for students.

For many applications a randomized algorithm is either the simplest algorithm available, or the fastest, or both. This tutorial presents the basic concepts in the design and analysis of randomized algorithms. The first part of the book presents tools from probability theory and probabilistic analysis that are recurrent in algorithmic applications. Algorithmic

examples are given to illustrate the use of each tool in a concrete setting. In the second part of the book, each of the seven chapters focuses on one important area of application of randomized algorithms: data structures; geometric algorithms; graph algorithms; number theory; enumeration; parallel algorithms; and on-line algorithms.
