 Bringing together the collective wisdom of a past generation of craftsmen, Traditional Toolmaking provides an in-depth record of the skills and techniques that made the mass production revolution of the twentieth century possible. When first published in 1915, this book was an answer to a vast array of tool-room problems and explained many essential toolmaking operations. It includes timeless

practices as well as some personally tailored methods by master toolmakers, including how to: make straight forming tools grind curved surfaces gauge the angle of a thread re-flute worn cutters and much more! With detailed descriptions of every procedure, essential mathematical rules and calculations for use in the workshop, and a number of illustrative figures, this book stands as an invaluable reference for those with an interest in practicing hands-on toolmaking processes.

Screwcutting is a guide to the theory and practice of threads and thread-making, whether that is threading a hole using hand tools or cutting a thread using a lathe. The book covers details of the major threadforms, such as metric, Whitworth and Unified threads, as well as the British Association (BA) and Model Engineering (ME and MME) series, the smaller metric and Unified threads, pipe threads, and specialist threads such as ACME, trapezoidal and RMS microscope threads. Techniques for making threads manually, as well as screwcutting in the lathe are also covered. As well as covering the basics of screwcutting, this book examines higher-level and advanced techniques, using case studies to demonstrate what can be achieved - fine, accurate and well-finished work. Illustrated throughout.
