Oversight Field Hearing Before the Subcommittee on Energy and Mineral Resources of the Committee on Natural Resources, U.S. House of Representatives, One Hundred Eleventh Congress, First Session, November 23, 2009, in Sacramento, California Natural Resources Canada

The historical importance and archaeological potential of deliberately discarded watercraft has not been a major feature of maritime archaeological enquiry. While research on the topic has appeared since the 1970s as books, chapters, and articles, most examples have been limited in focus and distribution, and in most cases disseminated as unpublished archaeological reports (i.e. the "gray literature".) So, too, has there been a lack of a single source representing the diversity of geographical, historic, thematic, and theoretical contexts that ships' graveyard sites and deliberately abandoned vessels represent. In contrast with much of the theoretical or case-specific literature on the theme of watercraft discard, this volume communicates to the reader the common heritage and global themes that ships' graveyard sites represent. It serves as a blueprint to illustrate how the remains of abandoned vessels in ships' graveyards are sites of considerable research value. Moreover, the case studies in this volume assist

researchers in understanding the evolution of maritime technologies, economies, and societies. This volume is intended to expose research potential, create discussion, and reinforce the significance of a prevalent cultural resource that is often overlooked.

1983-1994 CRC Press

W.A. de Jong President of TNO Until some decades ago man supposed that the resilience of the environment was unlimited. He thought he could draw heavily on nature with impunity and that he could infinitely dump his waste into the environment. We have come to know better now: virtually everyone is well aware that one cannot just go on burdening the environment of man, animal and plant to such an extent. TNO, the Netherlands Organization for Applied Scientific Research, is among those research institutions that are working on economically feasible solutions for pollution problems resulting from human activities. Soil contamination and remediation feature as important topics in TNO's environmental research programme. In view of the international scope of the problem, TNO organized an international conference on this subject in Utrecht, the Netherlands, in November 1985, which met with a worldwide response from the scientific community as well as from governments and industry. The international interest taken in soil contamination is underlined by the fact that the Second International Conference on Contaminated Soil takes place in a country where remedial action is being given high political priority.

This Base Realignment and Closure (BRAC) Cleanup Plan (BCP) describes the status, management and response strategy, and action items related to Cameron Station's ongoing environmental restoration and associated compliance programs. These programs support full - restoration of the installation property, which is necessary to meet the requirements for property disposal and reuse activities associated with the closure of the installation. The scope of the BCP considers the following regulatory mechanisms: the BRAC Act; National Environmental Policy Act (NEPA); Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) as amended by the Community Environmental Response Facilitation Act (CERFA); Resource Conservation and Recovery Act (RCRA); and other applicable laws. The Cameron Station BCP is a dynamic planning document which was developed by a BRAC Cleanup Team (BCT) consisting of U.S. Army, U.S. Environmental Protection Agency Region III (USEPA), and State of Virginia Department 9f Environmental Quality (VDEQ) representatives. It was necessary to make certain assumptions and interpretations to develop the schedule and cost estimates provided in this plan. The BCP will be updated regularly to reflect the current status and strategies of remedial actions, compliance programs and disposal and reuse planning. This document is the second in a series of updates/modifications and represents conditions and strategies as of January 1995.

Part 41, focuses on Navy fuel purchase contracts for Saudi Arabian oil and businesses' use of institutional advertising for tax exemptions during and after the war.

The Agricultural Research Center of the U.S. Dept. of Agric. Account of Activities... at Beltsville, Md Butterworth-Heinemann

This CRCnetBASE version of the best-selling Environmental Engineers' Handbook contains all of the revised, expanded, and updated information of the second edition and more. The fully searchable CD-ROM offers virtually instant access to all of the interrelated factors and principles affecting our environment as well as how the government and the industry must deal with it. It addresses the ongoing global transition in cleaning up the remains of abandoned technology, the prevention of pollution created by existing technology. The Environmental Engineers' Handbook on CD-ROM provides daily problem solving tools and information on state-of-the-art technologies for the future. The technology and specific equipment used in environmental control and clean-up is included for those professionals in need of detailed technical information. Because analytical results are an essential part of any environmental study, analytical methods used in environmental analysis are presented as well. Data is clearly presented in tables and schematic diagrams that illustrate the technology and techniques used in different areas. Béla G. Lipták speaks on Post-Oil Energy Technology on the AT&T Tech Channel.

This textbook provides students and law enforcement officers with the fundamentals of the criminal investigation process, from arrival on the scene to trial procedures. Written in a clear and simple style, Criminal Investigation: Law and Practice surpasses traditional texts by presenting a unique combination of legal, technical, and procedural aspects of the criminal investigation. The hands-on approach taken by the author helps to increase the learning experience. Criminal Investigation: Law and Practice, Second Edition, has been written to provide future law enforcement officers with a basic

understanding of the investigative process. It merges two areas that are crucial to the successful completion of an investigation: the law, both criminal and procedural, and criminal investigative techniques. It is written to provide the student investigator with the information needed to complete and investigation that can result in a successful prosecution. - comprehensive coverage of the criminal investigation, from arrival on the scene to trial procedures -unique combination of legal, technical, and procedural aspects of criminal investigation -many updated cases, many personally experienced by the author.

Criminal Investigations Today: The Essentials examines the processes, practices, and people involved in the investigation of crime in a brief and accessible format that hones in on the key topics students actually need to know. Drawing from his vast experience in the field, author Richard M. Hough distills the essentials of criminal investigations and takes students through the in-depth processes of criminal investigations while maintaining a streamlined approach that allows for optimal student learning. The text's focus on people within the investigative system is reinforced with running case studies and hands-on application. Included with this title: The password-protected Instructor Resource Site (formally known as SAGE Edge) offers access to all text-specific resources, including a test bank and editable, chapter-specific PowerPoint® slides.
