Second language phonology is approached in this book from the perspective of data-based studies into the English sound system as used by native and non-native speakers of the language. The book offers a unique combination of psycholinguistic, sociolinguistic and pedagogical approaches, with individual contributions investigating the effect of selected conditioning factors on the pronunciation of English. With all the richness of approaches, it is a strong phonetic background that unifies individual contributions to the volume. Thus, the book contains a large body of original, primary research which will be of interest to experienced scientist, practitioners and lecturers as well as graduate students planning to embark on empirical methods of investigating the nature of the sound system

SLA Research and Materials Development for Language Learning is the only book available to focus on the interaction between second language acquisition theory and materials development for language learning. It consists of contributions written by experts in SLA, experts in materials development, researchers who have expertise in both fields, and introductions and conclusions by the editor. The book is organized into four major sections - position statements; materials driven by SLA theory; evaluations of materials in relation to SLA theory; and proposals for action - that offer a diverse range of perspectives while maintaining a cohesive and comprehensive overview on the subject. This book is ideal for post-graduate courses in applied linguistics and second language acquisition and for researchers interested in the relationship between SLA and materials development.
