organic photochemistry in detail - rather, we shall mention a few types of important photochemical reactions and show how these can be explained by the principles discussed in the preceding section. Compounds have very different chemical behavior in their excited states compared to their ground states. 28.3: Organic Photochemistry - Chemistry LibreTexts The Basic Laws of Photochemistry The First Law of Photochemistry states that light must be absorbed for photochemistry to occur. This is a simple concept, but it is the basis for performing photochemical and photobiological experiments correctly. BASIC PHOTOCHEMISTRY - Photobiology PHOTOCHEM The role of light in effecting chemical change has been recognized for many years. Indeed, the connection between solar energy and the biosynthesis of plant carbohydrates from carbon dioxide and water was known by the early 1800's. Yet organic photochemistry was slow to develop as a well-understood and manageable science. PHOTOCHEM - CaltechAUTHORS This textbook covers the spectrum from basic concepts of photochemistry and photophysics to selected examples of current applications and research.
