Students of professional qualifications often work in the dark. Many take no formal tuition and are often left to learn off the page. Many students learn the theory but are unable to identify what the question requires. They miss marks they could, and should have picked up for material they have spent precious time studying. They fail exams they have the ability to pass. This book spotlights what examiners look for and helps you ask, and answer, this key question - What exactly does the examiner want? The book covers exam techniques, how to approach different styles of question

(such as CBA, essays, case studies) how to lay out your work, etc. Written in a straightforward manner, this study buddy gets the point across clearly without dumbing down important messages. Cartoons, illustrations and mind-maps show you how you should be thinking, and what you should be doing in order to work smarter, not harder. Professional exams are highly time pressured, both for the student and the marker. Good exam technique is a priority. This book will help you get all the marks you deserve, and perhaps a few you don't! * Get the most out of your study time, and maximum marks at exam time - this books shows you how to work smarter, not harder * Written by a CIMA Examiner and Tutor, this study buddy shows you exactly what the examiner is looking for * Illustrations, mind-maps and cartoons cool your nerves and show you how to plan and write your answer succinctly and successfully

The most important factor in passing any exam is plenty of question practice. The questions in the F2 Practice and Revision Kit cover all areas of the syllabus and are in the same order as the Study Text chapters. They include preparation questions for the harder topics, as well as plenty of exam standard questions. Therefore students can tailor their question practice to concentrate on areas of weakness, such as basic groups, or dip into topics as they revise them. There are also two mock exams to test the whole syllabus.

Despite a plethora of techniques to analyse the financial performance of a business, there has been no single methodology that has been overwhelmingly preferred by users. This could be an indication that either the methods themselves are deficient or they are limited by other factors that are not easily overcome. Unlike the current offerings in the field, which focus on issues relating to business performance management or non-financial aspects (such as market efficiency, satisfaction and workforce productivity), this book offers a solution to a major gap in the literature and understanding for those seeking to measure, analyse and benchmark the financial performance of any organisation (for-profit, not-for-profit and government agencies). It clearly identifies why current techniques fail; proposes and evidences a solution that overcomes these issues by including two algorithms that can be combined, to solve this problem; and demonstrates the practical application of the technique to the benefit of users in order to pinpoint real performance levels and insights. One of the largest issues this book will help to overcome is the inability to compare the accounts of businesses/organisations from different countries that report in different currencies. This technique eliminates the need for currency translations and the issues that arise with that process. This book is an invaluable and practical guide to assist accounting and finance practitioners in measuring and comparing financial performance across firms with different business models, different accounting policies and different scales of operations.

The book investigates how, and which, forgiving road environments (FOR) and self-explaining road measures (SER) will contribute to increasing road safety and also increase network efficiency on the road. It presents both the general approach and the methodology for generating the possible FOR and SER measures. The book further discusses the prioritization and the testing methodologies, as well as the designing VMS methodology. The next parts of the book present a few important examples: lane departure warning systems; intelligent speed adaptation systems and perception enhancement studies; designs of European pictorial signs, e.g. for VMS but also examples of designs of European road wordings; and finally how personalization can take place of VMS signs and wordings for the individual driver. The last part shows the final evaluation of FOR and SER, and detailed Multiple Criterion Analysis and Cost Benefit Analyses are performed on a number of FOR and SER measures. This results in the development of a set of guidelines, conclusions and recommendations for the future.

The outsourcing of clinical trials to Latin America by the transnational innovative pharmaceutical industry began about twenty years ago. Using archival information and field work in Argentina, Brazil, Costa Rica, Mexico and Peru, the authors discuss the regulatory contexts and the ethical dimensions of human experimentation in the region. More than 80% of all clinical trials in the region take place in these countries, and the European Medicines Agency has defined them as priority countries in Latin America. The authors raise questions about the quality of data obtained from the trials and the violation of human rights during their implementation. Their findings are presented in this volume, the first in-depth analysis of clinical trials in the region.
