"A gifted and thoughtful writer, Metzl brings us to the frontiers of biology and technology, and reveals a world full of promise and peril." — Siddhartha Mukherjee MD, New York Times bestselling author of *The Emperor of All Maladies* and *The Gene* Passionate, provocative, and highly

illuminating, *Hacking Darwin* is the must read book about the future of our species for fans of *Homo Deus* and *The Gene*. After 3.8 billion years humankind is about to start evolving by new rules... From leading geopolitical expert and technology futurist Jamie Metzl comes a groundbreaking exploration of the many ways genetic-engineering is shaking the core foundations of our lives — sex, war, love, and death. At the dawn of the genetics revolution, our DNA is becoming as readable, writable, and hackable as our information technology. But as humanity starts retooling our own genetic code, the choices we make today will be the difference between realizing breathtaking advances in human well-being and descending into a dangerous and potentially deadly genetic arms race. Enter the laboratories where scientists are turning science fiction into reality. Look towards a future where our deepest beliefs, morals, religions, and politics are challenged like never before and the very essence of what it means to be human is at play. When we can engineer our future children, massively extend our lifespans, build life from scratch, and recreate the plant and animal world, should we?

The contributors to this book focus on the relationship between nature and society from a variety

of theoretical and ethnographic perspectives. Their work draws upon recent developments in social theory, biology, ethnobiology, epistemology, sociology of science, and a wide array of ethnographic case studies -- from Amazonia, the Solomon Islands, Malaysia, the Mollucan Islands, rural communities from Japan and north-west Europe, urban Greece, and laboratories of molecular biology and high-energy physics. The discussion is divided into three parts, emphasising the problems posed by the nature-culture dualism, some misguided attempts to respond to these problems, and potential avenues out of the current dilemmas of ecological discourse.

The purpose of this four volume series is to make available for college teachers and students samples of important and realistic applications of mathematics which can be covered in

undergraduate programs. The goal is to provide illustrations of how modern mathematics is actually employed to solve relevant contemporary problems. Although these independent chapters were prepared primarily for teachers in the general mathematical sciences, they should prove valuable to students, teachers, and research scientists in many of the fields of application as well. Prerequisites for each chapter and suggestions for the teacher are provided. Several of these chapters have been tested in a variety of classroom settings, and all have undergone extensive peer review and revision. Illustrations and exercises are included in most chapters. Some units can be covered in one class, whereas others provide sufficient material for a few weeks of class time. Volume 1 contains 23 chapters and deals with differential equations and, in the last four chapters, problems leading to partial differential equations. Applications are taken from medicine, biology, traffic systems and several other fields. The 14 chapters in Volume 2 are devoted mostly to problems arising in political science, but they also address questions appearing in sociology and ecology. Topics covered include voting systems, weighted voting, proportional representation, coalitional values, and committees. The 14 chapters in Volume 3 emphasize discrete mathematical methods such as those which arise in graph theory, combinatorics, and networks.

For over a century, dinosaurs have been thought of as plodding, dim-witted giant lizards too awkward and ill equipped to survive wholesale environmental change. Bakker offers startling new evidence destined to forever alter the perception of the much-maligned monsters, depicting them as never before imagined: hot-blooded, amazingly agile, & surprisingly intelligent.

The reduction of suffering deserves special priority. Many ethical views support this claim, yet so far these have not been presented in a single place. Suffering-Focused Ethics provides the most

comprehensive presentation of suffering-focused arguments and views to date, including a moral realist case for minimizing extreme suffering. The book then explores the all-important issue of how we can best reduce suffering in practice, and outlines a coherent and pragmatic path forward. "An inspiring book on the world's most important issue. Magnus Vinding makes a compelling case for suffering-focused ethics. Highly recommended." - David Pearce, author of *The Hedonistic Imperative* and *Can Biotechnology Abolish Suffering?* "We live in a haze, oblivious to the tremendous moral reality around us. I know of no philosopher who makes the case more resoundingly than Magnus Vinding. In radiantly clear and honest prose, he demonstrates the overwhelming ethical priority of preventing suffering. Among the book's many powerful arguments, I would call attention to its examination of the overlapping biases that perpetuate moral unawareness. Suffering-Focused Ethics will change its readers, opening new moral and intellectual vistas. This could be the most important book you will ever read." - Jamie Mayerfeld, professor of political science at the University of Washington, author of *Suffering and Moral Responsibility* and *The Promise of Human Rights* "In this important undertaking, Magnus Vinding methodically and convincingly argues for the overwhelming ethical importance of preventing and reducing suffering, especially of the most intense kind, and also shows the compatibility of this view with various mainstream ethical philosophies that don't uniquely focus on suffering. His careful analytical style and comprehensive review of existing arguments make this book valuable reading for anyone who cares about what matters, or who wishes to better understand the strong rational underpinning of suffering-focused ethics." - Jonathan Leighton, founder of the Organisation for the Prevention of Intense Suffering, author of *The Battle for Compassion: Ethics in an Apathetic Universe* "Magnus Vinding breaks the taboo: Today, the problem of suffering is the elephant in the room, because it is at the same time the most relevant and the most neglected topic at the logical interface between applied ethics, cognitive science, and the current philosophy of mind and consciousness. Nobody wants to go there. It is not good for your academic career. Only few of us have the intellectual honesty, the mental stamina, the philosophical sincerity, and the ethical earnestness to gaze into the abyss. After all, it might also gaze back into us. Magnus Vinding has what it takes. If you are looking for an entry point into the ethical landscape, if you are ready to face the philosophical relevance of extreme suffering, then this book is for you. It gives you all the information and the conceptual tools you need to develop your own approach. But are you ready?" - Thomas Metzinger, professor of philosophy at the Johannes Gutenberg University of Mainz, author of *Being No One* and *The Ego Tunnel*
