Author's advice on how to use this book for exam cram (Included in preface) "Step 1: Read

through the 1st chapter of your new PMBOK 6th Edition Step 2: Read the 1st chapter of my book. Yes, it is a quick summary of the same thing. But I pinpoint what you need to pay attention to, because these will most likely be on the real exam. Step 3: Make sure you do the practice questions. Step 4: Check answer key and explanations. Each answer key also refers to the specific sections of your new PMBOK 6th Edition by page number. Step 5: Now repeat the steps 1-4 for every chapter. Ensure you have a big-picture view about the materials in each chapter. Also review the PM process map on P25 of your new PMBOK 6th Edition whenever you are done with a chapter. Step 6: When you finish all chapters, you would have a good view of all 10 knowledge areas. Now memorize the PM process map on P25 of your new PMBOK Let's review: the above steps should take you no more than 5 days even if you have only 2 hours each day. For some people it's possible to finish the materials during a weekend cram or study non-stop for a whole day (no more than $8 \times 2 = 16$ hours) Step 7: Now start mock exams. At the end of this book it provides Internet links to at least 5 online mock exams. Review the PM process map every time before you do the mock exam. How many exams you want to do is totally up to you. Always spend at least one hour to review each mock exam against new PMBOK 6th Edition. Step 8: Take a break (maybe one day or sleep one hour if you haven't done so for the past 24 hours) before the exam if necessary. Then you are ready!***ADDITIONAL SUGGESTION: If you want to get some "hands-on" fun for PMBOK 6th Edition, you can purchase our unique sister book as a companion: "Project Management Jumpstart with Microsoft Project," also available from

How can a scalable and efficient quality

management mechanism for cloud labor services be designed in a way that it delivers results with a well-defined level of quality to the requester? Cloud labor services are a specific form of crowdsourcing: A coordination platform serves as an interface between requesters who need to get work done and a large crowd of workers who want to perform work. An early example of such a platform is Amazon's Web marketplace Mturk, on which service requesters can publish open calls for so-called human intelligence tasks (HITs). Robert Kern's work makes a considerable contribution toward solving the quality problem for scalable human work. On the basis of a comprehensive framework of cloud labor, he develops a set of methods to conceptually measure and aggregate the quality of human work results, implements a platform to put those methods to work, and evaluates their application in a number of very compelling, real-world scenarios successfully combining concepts from statistics, information technology, and management. Reading this book will be beneficial to novices in cloud labor services looking for orientation in this new field as well as to advanced researchers and practitioners developing cloud quality concepts.
