Deployment Scanner configuration - JBoss AS 7.0

Deployment Modes. The filesystem deployment scanner in JBoss AS 7 and later works differently from previous JBoss AS releases. The scanner can operate in one of two different modes, depending on whether it will directly monitor the deployment content in order to decide to deploy (or redeploy) it. Auto-deploy mode:

[Application deployment - JBoss AS 7.2](#)

In an EAR the configuration should be in the META-INF directory. In a WAR or JAR deployment the configuration file can be in either the META-INF or WEB-INF/classes directories. The following configuration files are allowed: logging.properties . jboss-logging.properties . log4j.properties . log4j.xml . jboss-log4j.xml

JMS Queues and Topics. JMS queues and topics are sub resources of the messaging subsystem. They are defined in the jms-destinations section. One can define either a jms-queue or jms-topic. Each destination must be given a name and contain at least

one entry element.. Each entry refers to a JNDI name of the queue or topic. Keep in mind that any jms-queue or jms-topic which needs to be accessed ...
