Logic and its components (propositional, first-order,non-classical) play a key role in Computer Science and ArtificialIntelligence. While a large amount of information exists scatteredthroughout various media (books, journal articles, webpages, etc.),the diffuse nature of these sources is problematic and logic as atopic benefits from a unified approach. Logic for Computer Scienceand Artificial Intelligence utilizes this format, surveying the tableaux, resolution, Davis and Putnam methods, logic programming,as well as for example unification and subsumption. Fornon-classical logics, the translation method is detailed. Logic for Computer Science and Artificial Intelligence is theclassroom-tested result of several years of teaching at GrenobleINP (Ensimag). It is conceived to allow self-instruction for abeginner with basic knowledge in Mathematics and Computer Science,but is also highly suitable for use in traditional courses. Thereader is guided by clearly motivated concepts, introductions,historical remarks, side notes concerning connections with otherdisciplines, and numerous exercises, complete with detailed solutions, The title provides the reader with the tools needed to arrive naturally at practical implementations of the concepts and techniques discussed, allowing for the design of algorithms to solve problems.
