Balanced is the key word that is used to describe equilibrium situations. Thus, the net force is zero and the acceleration is 0 m/s/s. Objects at equilibrium must have an acceleration of 0 m/s/s. This extends from Newton's first law of motion. But having an acceleration of 0 m/s/s does not mean the object is at rest. Equilibrium and Statics - Physics Problem-Solving Strategy: Static Equilibrium. Identify the object to be analyzed. For some systems in equilibrium, it may be necessary to consider more than one object. Identify all forces acting on the object. Identify the questions you need to answer. Physics Equilibrium Problems And Solutions Equilibrium Conditions: Equilibrium in physics means, forces are in balance. The net force should be zero. In other words, forces acting downward and acting upward, and forces acting right and acting left should be equal in magnitude. Look at the example given below and try to understand what I say. It is particularly useful in understanding the connection between force and motion. In Figure $\text{\PageIndex{6}}$, $m_1 = 2.00 \text{ kg}$ and $m_2 = 4.00 \text{ kg}$.
