Many Muslim societies are in the throes of tumultuous political transitions, and common to all has been heightened debate over the place of shari`a law in modern politics and ethical life. Bringing together leading scholars of Islamic politics, ethics, and law, this book examines the varied meanings and uses of Islamic law, so as to assess the prospects for democratic, plural, and gender-equitable Islamic ethics today. These essays show that, contrary to the claims of some radicals, Muslim understandings of Islamic law and ethics have always been varied and emerge, not from unchanging texts but from real and active engagement with Islamic traditions and everyday life. The ethical debates that rage in contemporary Muslim societies reveal much about the prospects for democratic societies and a pluralist Islamic ethics in the future. They also suggest that despite the tragic violence wrought in recent years by Boko Haram and the Islamic State in Iraq, we may yet see an age of ethical renewal across the Muslim world.

Health informatics plays a central role in the digital transformation of the healthcare sector. The integration and connection of health services, practitioners and consumers is critical to the realisation of the improvements promised by digital health, and the secondary use of health data has led to ground-breaking research discoveries. Increased reliance upon all types of digital media has also established health informatics as a viable specialisation in healthcare. This book presents the proceedings of the 26th national Health Informatics Conference (HIC 2018), Australia's premier health informatics event, held in Sydney, Australia, in July/August 2018. The conference provides an environment for clinicians, researchers, health IT professionals, industry and consumers to integrate, educate and share the knowledge which drives innovative thinking, and this year's theme, 'Today's best practice, innovation today and preparing for tomorrow', focuses on the important issues of connecting the system, being smart with data, and enhancing the practitioner and consumer experience in healthcare interactions. The papers presented here reflect this theme, highlighting cutting-edge research evidence, technology updates and innovations from the digital transformation of the healthcare sector. Covering a wide spectrum of work, and encompassing major theoretical concepts, examples of key applications of new technologies and important new developments in the field of health informatics, the book will be of interest to all those working in the healthcare sector.

How David Hume and Adam Smith forged a new way of thinking about the modern state What is the modern state? Conspicuously undertheorized in recent political theory, this question persistently animated the best minds of the Enlightenment. Recovering David Hume and Adam Smith's long-underappreciated contributions to the history of political thought, *The Opinion of Mankind* considers how, following Thomas Hobbes's epochal intervention in the mid-seventeenth century, subsequent thinkers grappled with explaining how the state came into being, what it fundamentally might be, and how it could claim rightful authority over those subject to its power. Hobbes has cast a long shadow over Western political thought, particularly regarding the theory of the state. This book shows how Hume and Smith, the two leading lights of the Scottish Enlightenment, forged an alternative way of thinking about the organization of modern politics. They did this in part by going back to the foundations: rejecting Hobbes's vision of human nature and his arguments about our capacity to form stable societies over time. In turn, this was harnessed to a deep reconceptualization of how to think philosophically about politics in a secular world. The result was an emphasis on the "opinion of mankind," the necessary psychological basis of all political organization. Demonstrating how Hume and Smith broke away from Hobbesian state theory, *The Opinion of Mankind* also suggests ways in which these thinkers might shape how we think about politics today, and in turn how we might construct better political theory.
