Medicine Boydell & Brewer Ltd
Examines the post-mortem journeys of bodies, body-parts, organs, and brains in modern British medical research. This title is also available as Open Access.

Transactions of the Royal Society of Edinburgh Elsevier Health Sciences
Ergonomics is a human-centered discipline. This is particularly true for healthcare systems and patient safety where the human's well-being will undergo critical impacts if

solutions are not properly designed and practiced. Effective handling of these concerns involves knowledge from healthcare work (e.g., shift work, patient handling, and medical The Arts of Memory and the Pressures of History Elsevier Health Sciences

In this issue of Hand Clinics, guest editors Frédéric Schuind, Fabian Mougondo, and Luc Van Overstraeten bring their considerable expertise to the topic of The Use of Sonography in Hand/Upper Extremity Surgery. Top experts in the field cover key topics such as Flexor Tendons Sonography, Sonographic Diagnosis

of Carpal Tunnel Syndrome, Atlas of Sonographic Anatomy of the Hand and Wrist, and more. Contains 9 relevant, practice-oriented topics including Nerve Ultrasound-Assisted Surgery for Neuropathic Pain and Joint Denervation; Preoperative Evaluation of Thenar Muscles in Carpal Tunnel Syndrome by Ultrasonograph; Shear Wave Ultrasound Elastography for Hand Soft Tissue Assessment; and more. Provides in-depth clinical reviews on the use of sonography in Hand/Upper Extremity Surgery, offering actionable insights for clinical practice. Presents the latest information on this timely, focused topic under the leadership of

experienced editors in the field. Authors synthesize and distill the latest research and practice guidelines to create clinically significant, topic-based reviews.

Yearbook Routledge

This book examines how we can conceive of a 'postcolonial museum' in the contemporary epoch of mass migrations, the internet and digital technologies. The authors consider the museum space, practices and institutions in the light of repressed histories, sounds, voices, images, memories, bodies, expression and cultures. Focusing on the transformation of museums as cultural spaces, rather than physical places, is to propose a living archive formed through creation, participation, production and innovation. The aim is to propose a critical assessment of the museum in the light of

those transcultural and global migratory movements that challenge the historical and traditional frames of Occidental thought. This involves a search for new strategies and critical approaches in the fields of museum and heritage studies which will renew and extend understandings of European citizenship and result in an inevitable re-evaluation of the concept of 'modernity' in a so-called globalised and multicultural world.

Tells the story of one of Canada's warship corvettes that served during World War II and brought its crew

home every time they went out. It was the last Canadian ship to be attacked by the U.S. Navy, and it was eventually sunk, along with most of its crew, by a German submarine.

Representing the treatment and management philosophy of Dr. Susan Mackinnon, *Nerve Surgery* provides extensive coverage of innovative surgical options as well as guidance on the management of complicated compression neuropathies. In addition to detailed information on tried-and-true as well as cutting-edge surgical techniques, it contains chapters on the basic principles of nerve

surgery, such as Anatomy and Physiology for the Peripheral Nerve Surgeon and Evaluation of the Patient with Nerve Injury or Nerve Compression. This book is a core reference for all plastic surgeons, neurosurgeons, orthopedic surgeons, hand surgeons, residents, and allied health specialists treating patients with nerve injuries.

Thomas Beddoes (1760-1808) lived in 'decidedly interesting times' in which established orders in politics and science were challenged by revolutionary new ideas. Enthusiastically participating in the heady atmosphere of Enlightenment debate, Beddoes' career

suffered from his radical views on politics and science. Denied a professorship at Oxford, he set up a medical practice in Bristol in 1793. Six years later - with support from a range of leading industrialists and scientists including the Wedgwoods, Erasmus Darwin, James Watt, James Keir and others associated with the Lunar Society - he established a Pneumatic Institution for investigating the therapeutic effects of breathing different kinds of 'air' on a wide spectrum of diseases. The treatment of the poor, gratis, was an important part of the Pneumatic Institution and Beddoes, who had long concerned himself with their moral and material well-being, published numerous

pamphlets and small books about their education, wretched material circumstances, proper nutrition, and the importance of affordable medical facilities. Beddoes' democratic political concerns reinforced his belief that chemistry and medicine should co-operate to ameliorate the conditions of the poor. But those concerns also polarized the medical profession and the wider community of academic chemists and physicians, many of whom became mistrustful of Beddoes' projects due to his radical politics. Highlighting the breadth of Beddoes' concerns in politics, chemistry, medicine, geology, and education (including the use of

toys and models), this book reveals how his reforming and radical zeal were exemplified in every aspect of his public and professional life, and made for a remarkably coherent program of change. He was frequently a contrarian, but not without cause, as becomes apparent once he is viewed in the round, as part of the response to the politics and social pressures of the late Enlightenment.

Romance, Poetry, and Surgical Sleep A Biennial Retrospect of Medicine, Surgery and Their Allied Sciences British Women Surgeons and their Patients, 1860-1918 A study of the development of the hospital as a economic, medical and voluntary institution in the

second half of the nineteenth century. The Law Times Thieme Now fully revised and updated, Clinical Biochemistry, third edition is essential reading for specialty trainees, particularly those preparing for postgraduate examinations. It is also an invaluable current reference for all established practitioners, including both medical and scientist clinical biochemists. Building on the success of previous editions, this leading textbook primarily focuses on clinical aspects of the subject, giving detailed coverage of all conditions where clinical biochemistry is used in diagnosis and management - including nutritional disorders, diabetes,

inherited metabolic disease, metabolic bone disease, renal calculi and dyslipidaemias. The acquisition and interpretation of clinical biochemical data are also discussed in detail. Expanded sections on haematology and immunology for clinical biochemists provide a thorough understanding of both laboratory and clinical aspects New chapters are included on important evolving areas such as the metabolic response to stress, forensic aspects of clinical biochemistry and data quality management An extended editorial team - including three expert new additions - ensures accuracy of information and relevance to current

curricula and clinical practice A superb new accompanying electronic version provides an enhanced learning experience and rapid reference anytime, anywhere! When women agitated to join the medical profession in Britain during the 1860s, the practice of surgery proved both a help (women were neat, patient and used to needlework) and a hindrance (surgery was brutal, bloody and distinctly unfeminine). In this major new study, Claire Brock examines the cultural, social and self-representation of the woman surgeon from the second half of the nineteenth century until the end of the Great War. Drawing on a rich archive of British hospital records, she investigates precisely what surgery women performed and how these procedures affected their personal

and professional reputation, as well as the reactions of their patients to these new phenomena. Essential reading for those interested in the history of medicine, *British Women Surgeons and their Patients, 1860-1918* provides wide-ranging new perspectives on patient narratives and women's participation in surgery between 1860 and 1918. This title is also available as

Open Access.
