WHO Classification of Tumours of the
 Central Nervous System WHO
 Classification of Tumours of
 Haematopoietic and Lymphoid Tissues is a
 Revised Fourth Edition of the WHO series
 on histological and genetic typing of
 human tumours. This authoritative,
 concise reference provides an
 international standard for oncologists and
 pathologists and will serve as an
 indispensable guide for use in the design

of studies monitoring response to therapy
 and clinical outcome. Diagnostic criteria,
 pathological features, and associated
 genetic alterations are described in a
 strictly disease-oriented manner. Sections
 on all recognized neoplasms and their
 variants further include new ICD-O codes,
 epidemiology, clinical features,
 macroscopy, prognosis, and predictive
 factors. This classification, prepared by
 132 authors from 23 countries, contains
 about 1300 color images and tables and
 more than 4500 references.

WHO Classification of Tumours of the
 Breast International Agency for Research
 on Cancer

This second edition is more extensive and

detailed than the previous one - now a
 reference of two decades standing. New
 technical methods have increased our
 understanding of many tumours, and the
 earlier group of monomorphic adenomas
 has been separated for easier
 identification, while clearly defined
 tumours - even if uncommon - have their
 own category. With reference to their
 differences in prognosis and treatment,
 the various types of carcinomas are now
 listed separately, and new entities have
 been adopted. The inclusion of the TNM
 classification of salivary gland tumours
 together with the more detailed
 description of the tumour-like lesions will
 contribute to an even better

understanding.

WHO Classification of Tumours of Endocrine Organs WHO Classification of Tumours

The WHO Classification of Tumours of Endocrine Organs is the 10th volume in the 4th Edition of the WHO series on histological and genetic typing of human tumours. This authoritative, concise reference provides an international standard for oncologists and pathologists and will serve as an indispensable guide for use in the design of studies evaluating response to therapy and clinical outcome. Diagnostic criteria, pathological features, and associated genetic alterations are described in a disease-oriented manner. Sections on all recognized neoplasms and their variants include new ICD-O codes, epidemiology, clinical features, pathology, genetics, prognosis, and predictive factors. The book, prepared by 166 authors from 25 countries, contains more than 700 color images and tables and more than 3100 references.

International Classification of Diseases for Oncology IARC Who Classification of Tumours

This new volume in the WHO series on histological and genetic typing of human tumors covers tumors of the kidney, the urinary system, the prostate, the testis and paratesticular tissue and the penis. Each entity is extensively discussed with information on clinicopathological, epidemiological, immunophenotypic and genetic aspects of these diseases. This book is an authoritative, concise reference, prepared by 131 authors from 22 countries. It contains more than 800 color photographs, numerous MRIs, ultrasound images, CT scans, charts and 3000 references. This book is in the series commonly referred to as the "Blue Book" series. "Pathology and Genetics of Tumors of the Urinary System and Male Genital Organs" Contributors: Dr Lauri A. Aaltonen, Dr Ferran Algaba, Dr William C. Allsbrook Jr., Dr Isabel Alvarado-Cabrero, Dr Mahul B. Amin, Dr Pedram Argani, Dr Hans Arnholdt, Dr Alberto G. Ayala, Dr Sheldon Bastacky, Dr Louis R. This series (also known as the WHO Blue Books) is regarded as the gold standard for the diagnosis of tumours and comprises a unique synthesis of histopathological diagnosis with digital and molecular pathology. These authoritative and concise reference books provide indispensable international standards for anyone involved in the care of patients with cancer or in cancer research, underpinning individual patient treatment as well as research into all aspects of cancer causation, prevention, therapy, and education. This volume will be of particular interest to pathologists, oncologists, surgeons, and epidemiologists who manage or research soft tissue and bone tumours. Sections are included on all recognized neoplasms of the soft tissue and bone, as well as on genetic tumour syndromes affecting these sites. Since the previous edition, there have been changes based on recent molecular and genetic information, with impact on clinical practice.

Pathology and Genetics of Tumours of the Breast and Female Genital Organs IARC

This is the 5th volume in a WHO series on histological and genetic typing of human tumours. This edition focuses on cancers of the breast and female genital organs, and describes diagnostic criteria, pathological features, associated genetic alterations and gene expression patterns in a disease-oriented manner. Sections on

all recognised neoplasms and their variants include new ICD-O codes, incidence, age and sex distribution, location, clinical signs and symptoms, pathology, genetics and predictive factors. It contains colour photographs, X-rays, computed tomography (CT) and magnetic resonance (MR) images, charts and over 3,200 references. The classifications presented reflect the views of WHO working group conferences held in France in January and March 2002, and the volume was produced in collaboration with the International Academy of Pathology.

WHO Classification of Tumours of the Urinary System and Male Genital Organs is the eighth volume in the 4th Edition of the WHO series on histological and genetic typing of human tumours. This authoritative, concise reference book provides an international standard for oncologists and pathologists and will serve as an indispensable guide for use in the design of studies monitoring response to therapy and clinical outcome. Diagnostic criteria, pathological features, and associated genetic alterations are described in a strictly disease-oriented manner. Sections on all recognized neoplasms and their variants include new ICD-O codes, epidemiology, clinical features, macroscopy, pathology, genetics, and prognosis and predictive factors. It contains numerous color photographs, MRIs, ultrasound images, CT scans, charts and references.
World Health Organization

WHO Classification of Tumours of the Breast is the fourth volume of the WHO series on histological and genetic typing of human tumours. This authoritative, concise reference book provides an international standard for oncologists and pathologists and will serve as an indispensable guide for use in the design of studies monitoring response to therapy and clinical outcome. Diagnostic criteria, pathological features, and associated genetic alterations are described in a strictly disease-oriented manner. Sections on all recognized neoplasms and their variants include new ICD-O codes, epidemiology, clinical features, macroscopy, pathology, genetics, and prognosis and predictive factors. The book, prepared by 90 authors from 24 countries, contains more than 340 colour photographs, tables and figures, and more than 1600 references.

Female Genital Tumours is the fourth volume in the 5th edition of the WHO series on the classification of human tumours. This series (also known as the WHO Blue Books) is regarded as the gold standard for the diagnosis of tumours and comprises a unique synthesis of histopathological diagnosis with digital and molecular pathology. These authoritative and concise reference books provide indispensable international standards for anyone involved in the care of patients with cancer or in cancer research, underpinning individual patient treatment as well as research into all aspects of cancer causation, prevention, therapy, and education. What's new in this edition? The 5th edition, guided by the WHO Classification of Tumours Editorial Board, will establish a single coherent cancer classification presented across a collection of individual volumes organized on the basis of anatomical site (digestive system, breast, soft tissue and bone, etc.) and structured in a systematic manner, with each tumour type listed within a taxonomic classification: site, category, family (class), type, and subtype. In each volume, the entities are now listed from benign to malignant and are described under an updated set of headings, including histopathology, diagnostic molecular pathology, staging, and easy-to-read essential and desirable diagnostic

criteria. Who should read this book? - Pathologists - Oncologists - Cancer researchers - Surgeons - Epidemiologists - Cancer registrars This volume - Prepared by 191 authors and editors - Contributors from around the world - More than 850 high-quality images - More than 3100 references

Pathology and Genetics of Tumours of the Urinary System and Male Genital Organs

IARC Who Classification of Tumours
This is the third volume in the new World Health Organization series on histological and genetic typing of tumours. Tumours of the haematopoietic and lymphoid tissues are covered. This was a collaborative project of the European Association for Haematopathology and the Society for Haematopathology and others. The WHO classification is based on the principles defined in the Revised European-American Classification of Lymphoid Neoplasms (REAL) classification. Over 50 pathologists from around the world were involved in the project and proponents of all major lymphoma and leukaemia classifications have agreed to accept the WHO as the standard classification of haematological malignancies. So this classification represents the first true world wide consensus of haematologic malignancies. Colour photographs, magnetic resonance and ultrasound images and CT scans are included.

Tumors of the Central Nervous System

John Wiley & Sons
TNM Classification of Malignant Tumours, 7th Edition provides the latest, internationally agreed-upon standards to describe and categorize cancer stages and progression. Published in affiliation with the International Union Against Cancer (UICC), this authoritative guide contains important updated organ-specific classifications that oncologists and other professionals who manage patients with cancer need to accurately classify tumours for staging, prognosis and treatment. The major alterations addressed in the 7th Edition concern carcinomas of the oesophagus and the gastroesophageal junction, stomach, lung, appendix, biliary tract, skin, and prostate. In addition, there are several entirely new classifications: gastrointestinal carcinoids (neuroendocrine tumours) gastrointestinal stromal tumour upper aerodigestive mucosal melanoma Merkel cell carcinoma uterine sarcomas intrahepatic cholangiocarcinoma adrenal cortical carcinoma. A new approach has also been adopted to separate anatomical stage groupings from prognostic groupings in which other prognostic factors are added to T, N, and M categories. These new

prognostic groupings, as well as the traditional anatomical groupings, are presented for oesophageal and prostate carcinomas. Visit www.wileyanduiicc.com for more information about the International Journal of Cancer and our other UICC book titles

WHO Classification of Tumours of Soft Tissue and Bone Springer

WHO Classification of Tumours of Haematopoietic and Lymphoid Tissues is the third volume in the new WHO series on histological and genetic typing of human tumors. This authoritative, concise reference book covers the entire range of leukaemias and lymphomas. It provides an international standard for oncologists and pathologists and will serve as an indispensable guide for use in the design of studies monitoring response to therapy and clinical outcome. Diagnostic criteria, pathological features, and associated genetic alterations are described in a strictly disease-oriented manner. Sections on all recognized neoplasms and their variants include new ICD-O codes, incidence, age and sex distribution, location, clinical signs and symptoms, pathology, genetics, and predictive factors. The book, prepared by 130 authors from 22 countries, contains more than 1,000 color photographs, numerous magnetic resonance and ultrasound images, CT scans, charts, and 2,500 references. This book is in the series commonly referred to as the "Blue Book" series. Contributors: Dr Cem Akin, Dr Ioannis Anagnostopoulos, Dr Katsuyuki Aozasa, Dr Daniel A. WHO Classification of Tumours of the Digestive System IARC Who Classification of Tum

The WHO Classification of Tumours of the Eye is the 12th and final volume in the 4th edition of the WHO series on the classification of human tumors. The series (also known as the Blue Books) has long been regarded by pathologists as the gold standard for the diagnosis of tumors, and it is an indispensable guide for the design of evaluations, clinical trials, and studies involving cancer. These authoritative and concise reference books provide an international standard for anyone involved in cancer research or the care of cancer patients. Diagnostic criteria, pathological features, and genetic and other associated

molecular alterations are described in a disease-oriented manner. This volume updates the existing ICD-O codes and provides new codes for use in epidemiology and cancer registration. It also provides information on clinical features, pathology, genetics, programs, and protective factors for each of the tumor types covered. The editors expect that this volume will be of particular interest to pathologists, oncologists, and ophthalmologists who manage or research tumors of the eye. Sections are included on all recognized neoplasms (and their variants) of the eye, lacrimal apparatus, and conjunctiva. There have been particularly substantial changes to the classification of conjunctival neoplasia and melanoma, based on the latest information from genetic and molecular studies. An e-book version of this title is also available. If you have already purchased the print product and wish to have the e-version as well, IARC is offering special top-up pricing. Proof of purchase will be required for customers to avail themselves of this order.
