Reimbursement payment programs have already begun this metamorphosis and are increasingly being tied to quality measures. With the urgency of revolutionary change in the background, the healthcare organization must transform its care and business models to evolve into a next-level healthcare enterprise. In *Essential Operational Components for High-Performing Healthcare Enterprises*, Jon Burroughs and other nationally respected experts highlight the building blocks necessary to transform a healthcare organization into an integrated delivery system. The book is intended to be an introductory guide for healthcare practitioners, legal practitioners, healthcare students and law students who are concerned with the delivery of healthcare services in South Africa. The book emphasises the ethical and legal aspects of healthcare in the country while making references to international human rights and ethical standards applicable to healthcare services. As the book is a guide, it

does not deal exhaustively with the topics discussed. Instead it aims to give healthcare and legal practitioners some general guidelines. New edition update: - an updated ethics chapter that includes a robust section on African indigenous values in the context of health care. - a chapter on universal health care coverage and the NHI. - the legislation need to be reviewed and updated. - a section on alternate dispute resolution. - the section on research also requires updating. - the case studies also need to be made more recent to include current contextually relevant issues like the Life Esidimeni Tragedy. The ethics of research *Bioethics, Human Rights and Health Law 2e* NYU Press This book explores the potential of Pan-African thought in contributing to advancing psychological research, theory and practice. Euro/American mainstream psychology has historically served the interests of a dominant western paradigm. Contemporary trends in psychological work have emerged as a direct result of the impact of violent histories of slavery, genocide and colonisation. Hence, this book proposes that psychology, particularly in its social forms, as a discipline centered on the relationship between mind and society, is well-placed to produce the critical knowledge and

tools for imagining and promoting a just and equitable world.

This book provides an overview of the research

related to psychological assessment across South Africa. The thirty-six chapters provide a combination of psychometric theory and practical assessment applications in order to combine the currently disparate research that has been conducted locally in this field. Existing South African texts on psychological assessment are predominantly academic textbooks that explain psychometric theory and provide brief descriptions of a few testing instruments.

Psychological Assessment in South Africa provides in-depth coverage of a range of areas within the broad field of psychological assessment, including research conducted with various psychological instruments. The chapters critically interrogate the current Eurocentric and Western cultural hegemonic practices that dominate the field of psychological assessment. The book therefore has the potential to function both as an academic text for graduate students, as well as a specialist resource for professionals, including psychologists, psychometrists, remedial teachers and human

resource practitioners. *Career Development and Planning* Oxford University Press

Higher Education Quality Assurance in Sub-Saharan Africa
Mosby Elsevier
Health Science

This report assesses the status and practice of higher education quality assurance in Sub - Sahara Africa, focusing on degree - granting tertiary institutions. A main finding is that structured national - level quality assurance processes in African higher education are a very recent phenomenon and that most countries face major capacity constraints. Only about a third of them have established structured national quality assurance mechanism, often only as recently as during the last ten years. Activities differ in their scope and rigor, ranging

from simple licensing of institutions by the minister responsible for higher education, to comprehensive system - wide program accreditation and ranking of institutions. Within institutions of higher learning, self assessment and academic audits are gradually being adopted to supplement traditional quality assurance methods. However, knowledge about and

experience with self - assessments are limited. The main challenges to quality assurance system in Africa are cost and human capacity requirements. For countries with large tertiary systems, the report recommends institutional, rather than program accreditation as a cost - effective option. However, where tertiary systems are small and underdeveloped, a less

formal self - assessment for each institution may be necessary until the capacity could be strengthened to support a more formal nation quality assurance agency in the long run.
