Arabic-English-Arabic  
Legal Translation BRILL  
This book is based on the  
very popular international  
publication (Crezee, 2013)  
and has been  
supplemented with  
Chinese glossaries. Just

like the 2013 textbook,  
this practical resource will  
allow interpreters and  
translators to quickly read  
up on healthcare settings,  
familiarizing themselves  
with anatomy, physiology,  
medical terminology and  
frequently encountered  
conditions, diagnostic  
tests and treatment  
options. It is an  
exceptionally useful and

easily accessible  
handbook, in particular for  
English-speaking patients,  
Chinese-speaking doctors,  
and first language  
Chinese-speaking  
students in healthcare  
related programs. This  
book includes special  
comments on the medical  
system in some English-  
and Chinese-speaking  
countries and gives

concrete examples of patient expectations for hospital stays or physician visits. Also included is information regarding the establishment of some health interpreting services, the nature of Chinese medical terminology and specific culture-related concepts to be aware of.

This book focuses on the lexical borrowing between English and Arabic, and offers historical

background regarding the contact between these two languages. It sheds light on why and how both languages have come in contact, showing how the hegemony of the English language can be clearly seen in its impact on Arabic. Simultaneously, the text describes the role that Arabic played in shaping and enriching English in its early phase.

Biomedical engineering is one of the most prominent and rapidly developing engineering fields. It is a discipline that is involved in the development of devices, algorithms, processes, procedures and systems to enhance and improve

the medical field. Biomedical engineering has multiple areas of specialization that include: biomechanics, biomaterials, tissue engineering, imaging, and bioinstrumentation. This book serves as a guide to students and professionals seeking to understand commonly used technical terms and phrases in the biomedical engineering field. The content is specifically designed to define technical terms in a general context to facilitate an overall

understanding. The author begins by translating terms in English to Arabic then Arabic to English. This text can be used as a tool in the academic or professional environment for both English speaking and non-English speaking individuals alike.

*Russian-Arabic Medical Dictionary* Routledge English-Arabic bilingual medical glossary: This glossary contains 2,100 words and definitions. A team of bilingual professionals translated the English terms to the

target language. The first draft was reviewed by physicians and community members for accuracy and usability. The second draft incorporated all changes and was then back translated to ensure clarity. The final document was created based on these processes. The glossary does not include all linguistic and dialectical variations of the target language but is based on the more commonly used form of the language.

 The Qur'an is the living source of all Islamic teaching, and is of singular importance to those interested in Islam and the study of religions. Despite this, there exists a long-felt lack of research tools for English first-language speakers who wish to access the Qur'an in the original Arabic. The "Dictionary of Qur'anic Usage" is the first comprehensive, fully-researched and contextualised Arabic-

English dictionary of Qur'anic usage, compiled in accordance with modern lexicographical methods by scholars who have a lifelong immersion in Qur'anic Studies. Based on Classical Arabic dictionaries and Qur'an commentaries, this work also emphasises the role of context in determining the meaning-scatter of each vocabulary item. Illustrative examples from Qur'anic verses are provided in support of the definitions given for each context in which a particular word occurs,

with cross-references to other usages. Frequently occurring grammatical particles are likewise thoroughly explained, insofar as they are used in conveying various nuances of meaning in the text.

Medical Arabic is a valuable resource for students interested in

learning medical Arabic at ACTFL level Advanced Low. Effective communication is essential in health care, and communication is most effective when both parties share a common language, therefore resulting in a comfortable relationship between health care provider and patient. This textbook is intended for those with prior knowledge of Arabic language and grammar. It is designed to provide students with the linguistic and cultural competencies and

medical Arabic terminology necessary to communicate in medical settings such as a hospital, clinic, or a community health care facility. Students will be able to ask questions in Arabic and provide answers in common medical situations, conduct patient interviews, and understand a wider variety of possible responses from patients. The book provides clear explanations of medical vocabulary and concepts as they occur in the

reading materials to encourage active interaction with the text. The book's drills are designed as either in-class exercises or homework. The answer key for the book exercises is also provided as a downloadable e-resource. Written by dynamic authors who taught Arabic as a foreign language for several years and reviewed by physicians and professionals in the field, the book is an essential guide for students in medical school, biology, and other

science majors. Students will find Medical Arabic more than merely a textbook but rather a pathway to enhance their communication skills effectively.

The current volume represents a revival of Arabic translation and terminology studies. These disciplines have been dominated by Western scholarship in recent decades, but in truth their historical tradition as a whole owes

a great debt to Arabic scholarship. The first systematic translation activity ever organized was under the Abbasids in Baghdad in the 9th Century CE, and Arabic domination continued for several centuries before the tide turned. In this collection, the importance of the ongoing translation and terminology movement in the Arab world is revealed through the works of some of the most distinguished scholars, who investigate a wide range of relevant topics from the making of

the first ever Arabic monolingual dictionary to modern-day localization into Arabic. Arabic terminology standardization as well as legal, medical, Sufi and Quranic terms — issues with both cultural and economic ramifications for the Arab world — are thoroughly examined, completing the solid framework of this rich tradition that still has a lot to offer.

Legal Translation provides a groundbreaking investigation of the issues found in legal translation between Arabic and English. Drawing on a contrastive-comparative approach, it analyses parallel authentic legal documents in both Arabic and English to examine the features of legal discourse in both languages and uncover the different translation techniques used. In so doing, it addresses the following questions: What are the features of English and Arabic legal texts?

What are the similarities and differences of English and Arabic legal texts? What are the difficult areas of legal translation between English and Arabic legal texts? What are the techniques for translating these difficult areas on the lexical and syntactic levels? Features include: A thorough description of the features of legal translation in both English and Arabic, drawing on empirical new research, corpus data analysis and strategic two-way comparisons between source texts and

target texts Coverage of a broad range of topics including an outline of the chosen framework for data analysis, a historical survey of legal discourse developments in both Arabic and English and detailed analyses of legal literature at both the lexical and syntactic levels Attention to common areas of difficulty such as Shariah Law terms, archaic terms and modal auxiliaries Many examples and excerpts from a wide selection of authentic legal documents,

reinforced by practical discussion points, exercises and practice drills to encourage active engagement with the material and opportunities for hands-on learning. Wide-ranging, scholarly and thought-provoking, this will be a valuable resource for advanced undergraduates and postgraduates on Arabic, Translation Studies and Comparative Linguistics courses. It will also be essential reading for translation professionals and researchers working in the field.

The Medical Formulary of Al-Samarqandi demonstrates the high development of pharmacology by the Arabs in the Middle Ages. It was far from a dark

period in science for it was in this area, as well as in Arabic optics and chemistry, that experimental science first began to develop. This is shown by al-Samarqandi's work which describes many new drugs, chemical processes, and a more advanced pharmacological theory. No part of this work has ever before been brought to the notice of historians of medicine. For the first time, the authors give a complete translation of this Aqrâbôdhîn in order to present a complete

picture of the pharmacological knowledge of the day. There is a comprehensive section of Notes and Comments with particular attention being drawn to

the present-day usage of old Arabic drugs, the employment of the drugs in the much earlier al-Kindi Medical Formulary, and to the etymological

discussion of Arabic plant names not studied in previous works on the subject. Finally there is a Glossary of Arabic-English terms and a selected Bibliography.
