As lawyers, we must not, in hot pursuit of common law, outrun common sense. The dread of that eventuality prompted this book. Learned Writing promotes common sense in legal language. Plain language, which is commonsensical, broadens

access to legal documents, thus democratizing the law. If democracy is government of the people, by the people, and for the people, law is the language in which government interacts with the people—it is the language of democracy. The people whose government speaks through law must understand what is said. No democratic society should brook legalese, a dense, verbose dialect known only to lawyers. What then should society do to redress the lawyer-induced obscurity? A Shakespearean character had an alarming proposal: "The first thing we do, let's kill all the lawyers." Apparently, that proposal was not enthusiastically endorsed, which explains why we're still here. A milder remedy—enrolling lawyers in language classes—has been muted, which explains why this book is in your hands. Learned Writing motivates lawyers

to prefer plain language to the legalese and verbosity that have besmirched legal writing for centuries. This book is as sweeping a treatment of its subject as you can find anywhere.

For centuries, the Chinese have been intermarrying with inhabitants of the Philippines, resulting in a creolized community of Chinese mestizos under the Spanish colonial regime. In contemporary

Philippine society, the “Chinese” are seen as a racialized “Other” while descendants from early Chinese-Filipino intermarriages as “Filipino.” Previous scholarship attributes this development to the identification of Chinese mestizos with the equally “Hispanicized” and “Catholic” indios. Building on works in Chinese transnationalism and cultural anthropology, this book examines the everyday practices of Chinese merchant families in Manila from the 1860s to the 1930s. The result is a fascinating study of how families and individuals creatively negotiate their identities in ways that challenge our understanding of the genesis of ethnic identities in the Philippines. “...[This book] helps contribute to the revision of the existing literature on the Chinese and Chinese mestizos with a new perspective that highlights the emerging field of transnational studies.” - Prof. Augusto Espiritu, University of Illinois at Urbana-Champaign “...the author does an outstanding job and we recommend that citizens of the Philippine ‘nation,’ whether they see themselves as ‘Chinese’ or ‘Filipino’ would do well to read this work and understand the origins of the racial stereotypes that influence the way they look at particular members of Philippine society, particularly in Manila.” - Prof. Ellen Palanca and Prof. Clark Alejandrino, Ateneo de Manila University “...an ambitious study of the Chinese and first-generation Chinese mestizos of Manila...[the author] has added valuable research materials from Philippine and American archival collections and...a wide range of published primary sources...The book is meticulously annotated and rich in descriptive detail...” - Michael Cullinane, University of Wisconsin-Madison

The role of markets in linking local communities to larger networks of commerce, culture, and political power is the central element in Anand A. Yang's provocative and original study. Yang uses bazaars in the northeast Indian state of Bihar during the colonial period as the site of his investigation. The bazaar provides a distinctive locale for posing fundamental questions regarding indigenous societies under colonialism and for highlighting less familiar aspects of colonial India. At one level, Yang reconstructs Bihar's marketing system, from its central place in the city of Patna down to the lowest rung of the periodic markets. But he also concentrates on the dynamics of exchanges and negotiations between different groups and on what can be learned through the “voices” of people in the bazaar:

landholders, peasants, traders, and merchants. Along the way, Yang uncovers a wealth of details on the functioning of rural trade, markets, fairs, and pilgrimages in Bihar. A key contribution of *Bazaar India* is its many-stranded narrative history of some of South Asia's primary actors over the past two centuries. But Yang's approach is not that of a detached observer; rather, his own voice is engaged with the voices of the past and with present-day historians. By focusing on the world beyond the mud walls of the village, he widens the imaginative geography of South Asian history. Readers with an interest in markets, social history, culture, colonialism, British India, and historiographic methods will welcome his book.

Approaching writing as a form of cultural practice and understanding text as an historical object, this book not only recovers elements of the ritual practice of Middle-Period weddings, but also reassesses the relationship between texts and the Middle-Period past. Its fourfold narrative of the writing of weddings and its spirited engagement with the texts—ritual manuals, engagement letters, nuptial songs, calendars and almanacs, and legal texts—offer a form and style for a cultural history that accommodates the particularities of the sources of the Chinese imperial past.

Nakshatra means 'something that never decays'. It has been referred to as 'constellation' or 'asterism' and also at times as 'lunar mansions' by astrologers. Among these, the word 'asterism' comes closest to the meaning of 'Nakshatra'. Nakshatra is the Real Secret of Vedic Astrology. There are billions of stars in the sky. A group of stars when forms a recognizable pattern, we call it a constellation. There could be uncountable number of constellations in the skies depending upon from where we see it. We see them from the Earth and the astronomers have discovered 88 constellations till now. In astrology, we only use 27 constellations, which form the twelve zodiac belts. There are 12 zodiac sign in this zodiac belt and each zodiac sign has a width of 30 degrees. Each zodiac sign is owned by a certain planet out of 7 primary planets. A planet can be present anywhere in Zodiac sign, either in its own zodiac sign or in some other zodiac sign. In the Vedic (Hindu) system of Astrology, known in Sanskrit as Jyotish, the 27 constellations and not the 12 star-signs are the key to understanding celestial influences on our planet. These 27 constellations are known as the 27 Nakshatra, which are 300 to 400 light years away from earth. Based on a person's moon Nakshatra at the time of birth, Jyotish offers a most powerful predictive technique compared to other forms of astrology.

By focusing on contemporary popular religious traditions, the book represents a substantial contribution to the study of modern religious practices in Banaras, holy city of India. This book offers in-depth, ethnographic views of many contemporary popular religious practices that have, for the most part, received little attention by scholars. Topics covered include the Ramlila celebrations, devotion to Hanuman, and goddess worship, and the way that Banarsi Boli, the local dialect of Banaras, supports its users in their identification with the sacred city.

Calendars were at the heart of ancient culture and society, and were far more than just technical, time-keeping devices. *Calendars in Antiquity* offers a comprehensive study of the calendars of ancient Mesopotamia, Egypt, Persia, Greece, Rome, Gaul, and all other parts of the Mediterranean and the Near East, from the origins up to and including Jewish and Christian calendars in late Antiquity. In this volume, Stern sheds light on the political context in which ancient calendars were designed and managed. Set and controlled by political rulers, calendars served as expressions of political power, as mechanisms of social control, and sometimes as assertions of political independence, or even of sub-culture and dissidence. While ancient calendars varied widely, they all shared a common history, evolving on the whole from flexible, lunar calendars to fixed, solar schemes. The Egyptian calendar played an important role in this process, leading most notably to the institution of the Julian calendar in Rome, the forerunner of our modern Gregorian calendar. Stern argues that this common, evolutionary trajectory was not the result of scientific or technical progress. It was rather the result of major political and social changes that transformed the ancient world, with the formation of the great Near Eastern empires and then the Hellenistic and Roman Empires from the first millennium BC to late Antiquity. The institution of standard, fixed calendars served the administrative needs of these great empires but also contributed to their cultural cohesion.

This series aims at bridging the gap between historical theory and the study of historical memory as well as western and non-western concepts, for which this volume offers a particularly good example. It explores cultural differences in conceptualizing time and history in countries such as China, Japan, and India as well as pre-modern societies.

Geodynamics concerns with the dynamics of the global motion of the earth, of the motion in the earth's interior and its interaction with surface features, together with the mechanical processes in the deformation and rupture of geological structures. Its final object is to determine

the driving mechanism of these motions which is highly interdisciplinary. In preparing the basic geological, geophysical data required for a comprehensive mechanical analysis, there are also many mechanical problems involved, which means the problem is

coupled in a complicated manner with geophysics, rock mechanics, seismology, structural geology etc. This topical issue is Part I of the Proceedings of an IUTAM / IASPEI Symposium on Mechanics Problems in Geodynamics held in Beijing, September

1994. It addresses different aspects of mechanics problems in geodynamics involving tectonic analyses, lithospheric structures, rheology and the fracture of earth media, mantle flow, either globally or regionally, and either by forward or inverse analyses or numerical simulation.
