Notes on the Synthesis of Form

Harvard University Press
 Dive into the compelling mystical world of the Healer series by New York Times bestselling author Maria V. Snyder. Laying hands upon the injured and dying, Avry of Kazan absorbs their wounds and diseases into herself. But rather than being honored for her skills, she is hunted. Healers like Avry are accused of spreading the plague that has decimated the Fifteen Realms, leaving the survivors in a state of chaos. Stressed and tired from hiding, Avry is abducted by a band of rogues who, shockingly, value her gift above the golden bounty offered for her capture. Their leader, an enigmatic captor-protector with powers of his own, is unequivocal in his demands: Avry must heal a plague-stricken prince—leader of a campaign against her people. As they traverse the daunting Nine Mountains, beset by mercenaries and magical dangers, Avry must decide who is worth healing and what is worth dying for. Because the price of peace may well be her life... Originally published in 2010

From New York Times bestselling author Diane Chamberlain comes a novel of chilling intrigue, a decades-old disappearance, and one woman's quest to find the truth... "A novel about arts and secrets...grippingly told...pulls readers toward a shocking conclusion."—People magazine, Best New Books North Carolina, 2018: Morgan Christopher's life has been derailed. Taking the fall for a crime she did not commit, her dream of a career in art is put on hold—until a mysterious visitor makes her an offer that will get her released from prison immediately. Her assignment: restore an old post office mural in a sleepy southern town. Morgan knows nothing about art restoration, but desperate to be free, she accepts. What she finds under the layers of grime is a painting that tells the story of madness, violence, and a conspiracy of small town secrets. North Carolina, 1940: Anna Dale, an artist from New Jersey, wins a national contest to paint a mural for the post office in Edenton, North Carolina. Alone in the world and in great need of work, she accepts. But what she doesn't expect is to find herself immersed in a town where prejudices run deep, where people are hiding secrets behind closed doors, and where the price of being different might just end in murder. What happened to Anna Dale? Are the clues hidden in the decrepit mural? Can Morgan overcome her own demons to discover what exists beneath the layers of lies? "Chamberlain, a master storyteller, keeps readers hooked, with a story line that leavens history and social commentary with romance and mystery."—Lexington Dispatch

[Artificial Brooding](#) Simon and Schuster

The very best of the world's best researchers have discovered a way to develop Africa: Way Omega. Now Africa's heads of state are at a summit to approve it. If they do, it promises Africa will start developing immediately. Unknown to the summit are aggrieved conspirators plotting to defeat Way Omega and replace it with a rival strategy: Path Alpha. Their path, they say, is the only way. Should the summit still follow Way Omega, or make a U-turn? Fathers of Nations is a satire on contemporary African politics.

"These notes are about the process of design: the process of inventing things which display new physical order, organization, form, in response to function." This book, opening with these words,

presents an entirely new theory of the process of design. In the first part of the book, Christopher Alexander discusses the process by which a form is adapted to the context of human needs and demands that has called it into being. He shows that such an adaptive process will be successful only if it proceeds piecemeal instead of all at once. It is for this reason that forms from traditional un-self-conscious cultures, molded not by designers but by the slow pattern of changes within tradition, are so beautifully organized and adapted. When the designer, in our own self-conscious culture, is called on to create a form that is adapted to its context he is unsuccessful, because the preconceived categories out of which he builds his picture of the problem do not correspond to the inherent components of the problem, and therefore lead only to the arbitrariness, willfulness, and lack of understanding which plague the design of modern buildings and modern cities. In the second part, Mr. Alexander presents a method by which the designer may bring his full creative imagination into play, and yet avoid the traps of irrelevant preconception. He shows that, whenever a problem is stated, it is possible to ignore existing concepts and to create new concepts, out of the structure of the problem itself, which do correspond correctly to what he calls the subsystems of the adaptive process. By treating each of these subsystems as a separate subproblem, the designer can translate the new concepts into form. The form, because of the process, will be well-adapted to its context, non-arbitrary, and correct. The mathematics underlying this method, based mainly on set theory, is fully developed in a long appendix. Another appendix demonstrates the application of the method to the design of an Indian village.

Lieutenant General Daniel Opande, in his autobiography In Pursuit of Peace in Africa, shares his experiences in childhood, education, family and military career until his retirement. He wore many hats: soldier, military leader, peacemaker, humanitarian, peace ambassador and mediator. Notable highlights include his role in Kenya's Shifta Campaign of the 1960s and engaging with rebels during peace operations he led in Namibia, Mozambique, Liberia, and Sierra Leone. In retirement, General Opande has occasionally mediated conflicts; among them the 2007, 2008, 2013 and 2017 election crises in Kenya and the aftermath of the 2015 upheavals in South Sudan. This book is a rich inspirational resource for aspiring leaders.

Fully updated and matched to the Cambridge syllabus, this stretching Student Book is trusted by teachers around the world to support advanced understanding and achievement at IGCSE. The popular, stretching approach will help students to reach their full potential. Written by an experienced author, Stephen Pople, this updated edition is full of engaging content with up-to-date examples to cover all aspects of the Cambridge syllabus. The step-by-step approach will lead students through the course in a logical learning order building knowledge and practical skills with regular questions and practical activities. Extension material will stretch the highest ability students and prepare them to take the next step in their learning. Practice exam questions will consolidate student understanding and prepare them for exam success. Each book is accompanied by free online access to a wealth of extra support for students including practice exam questions, revision checklists and advice on how to prepare for an examination.

This series has been endorsed by Cambridge Assessment International Education. Practise and consolidate knowledge gained from the Student's Book with this write-in workbook full of

corresponding learning activities. - Save time when planning with ready-made homework or extension exercises. - Reinforce student's understanding of key mathematical concepts with varied question types, knowledge quizzes and the use of ICT. - Challenge learners with extra practice activities to encourage regular self-assessment.

Electrochemistry I Springer

In this gorgeously stunning debut, a mysterious child teaches two strangers how to love and trust again. After the loss of her mother and her own battle with breast cancer, Joanna Teale returns to her graduate research on nesting birds in rural Illinois, determined to prove that her recent hardships have not broken her. She throws herself into her work from dusk to dawn, until her solitary routine is disrupted by the appearance of a mysterious child who shows up at her cabin barefoot and covered in bruises. The girl calls herself Ursa, and she claims to have been sent from the stars to witness five miracles. With concerns about the child's home situation, Jo reluctantly agrees to let her stay--just until she learns more about Ursa's past. Jo enlists the help of her reclusive neighbor, Gabriel Nash, to solve the mystery of the charming child. But the more time they spend together, the more questions they have. How does a young girl not only read but understand Shakespeare? Why do good things keep happening in her presence? And why aren't Jo and Gabe checking the missing children's website anymore? Though the three have formed an incredible bond, they know difficult choices must be made. As the summer nears an end and Ursa gets closer to her fifth miracle, her dangerous past closes in. When it finally catches up to them, all of their painful secrets will be forced into the open, and their fates will be left to the stars.

The Principles of Biology Paul Vitta

While it is often said that a person with a negative attitude cannot be helped, it is also true that a person with a positive attitude cannot be stopped. Life is an obstacle course in which we can often become our own biggest obstacle, but a positive attitude can be transformational. In one sense, this book is a road map for a life journey in achieving more. It offers direction and can help you make positive decisions in a noisy and cluttered environment. Success is neither a miracle nor a mystery. It is the natural outcome of consistently applying certain principles on an ongoing basis. Success does not depend upon special skills, formal education or superior intelligence. Success is a matter of understanding and acting upon principles that have been in existence for centuries. These principles may be simple in themselves but none of them will work unless they are put into firm and decisive action. This book effectively teaches not only the principles of success but also how to avoid expensive and demoralising mistakes. The principles themselves are universal, cutting across country, culture and religion. Diligently practising them will help you develop confidence and allow your life to become more meaningful and rewarding. Applying these principles may require a lot of self-discipline and commitment but, once learned and applied, the results can be rewarding and gratifying. If you want to be successful and happy, then become a student and study the life of successful people in depth; if you want to become wealthy, then study the principles of acquiring wealth. Learning to make a living and learning to live are two different things. This book helps you design a more meaningful life, by making positive choices and avoiding the most common pitfalls. Acquiring facts is knowledge; interpreting facts is understanding; and the proper application of facts is wisdom. This book by Shiv Khera is designed to help you create an action plan to optimize your potential - in other words, to achieve more.

Peeling Back the Mask East African Publishers

The first Graywolf Press African Fiction Prize winner, a story of a girl's fantastical sea voyage to rescue her father The House of Rust is an enchanting novel about a Hadhrami girl in Mombasa. When her fisherman father goes missing, Aisha takes to the sea on a magical boat made of a skeleton to rescue him. She is guided by a talking scholar's cat (and soon crows, goats, and other animals all have their say, too). On this journey Aisha meets three terrifying sea monsters. After she survives a final confrontation with Baba wa Papa, the father of all sharks, she rescues her own father, and hopes that life will return to normal. But at home, things only grow stranger. Khadija Abdalla Bajaber's debut is a magical realist coming-of-age tale told through the lens of the Swahili and diasporic Hadhrami culture in Mombasa, Kenya. Richly descriptive and written with an imaginative hand and sharp eye for unusual detail, The House of Rust is a memorable novel by a thrilling new voice.

Touch of Power MIRA

In a book that is both groundbreaking and accessible, Daniel C. Dennett, whom Chet Raymo of The Boston Globe calls "one of the most provocative thinkers on the planet," focuses his unerringly logical mind on the theory of natural selection, showing how Darwin's great idea transforms and illuminates our traditional view of humanity's place in the universe. Dennett vividly describes the theory itself and then extends Darwin's vision with impeccable arguments to their often surprising conclusions, challenging the views of some of the most famous scientists of our day.

Finance Oxford University Press, USA

From Onjali Q. Rauf, the award-winning and best-selling author of *The Boy at the Back of the Class*, comes an incredible story about missing histories and the concept of a universal family, told with humour and heart. Leo and his best friend Sangeeta are the odd ones out in their school. But as Leo's dad is always telling him, it's because they're special. Only thing is, if they're so special, how come they never see anyone who looks like them in their school history books? Then, on a class trip to a nearby cathedral, Leo's attention is drawn to a large marble slab high above the doors of the hall. Right there, bang in the middle of a list of war heroes, Leo finds himself staring at something incredible: his own name. Desperate to know who this other Leo was, the two friends embark on a search. And together, they begin to uncover missing stories from the past, ones which they are determined to put back into their rightful place in the pages of history. Touching on themes of historical racism, *The Lion Above the Door* shines a light on the stories our history books have yet to contain and the power of friendships that can last through generations. The first edition of this book also contains a special collection of historical photos and stories of real life forgotten heroes from World War Two.

Inheritance HarperCollins UK

Betrayal in the City, first published in 1976 and 1977, was Kenya's national entry to the Second World Black and African Festival of Arts and Culture in Lagos, Nigeria. The play is an incisive, thought-provoking examination of the problems of independence and freedom in post-colonial African states, where a sizeable number of people feel that their future is either blank or bleak. In the words of Mosese, one of the characters: "It was better while we waited. Now we have nothing to look forward to. We have killed our past and are busy killing our future."--Page 4 of cover

Brandwashed East African Educational Publishers

This book includes Monday to Friday lessons for each day of a 36-week school year and short daily lessons. The Monday to Thursday lessons include two sentences to edit, including corrections in punctuation, capitalization, spelling, grammar, and vocabulary and three items practicing a variety of language and reading skills. Friday practice cycles through five formats: language usage, identifying and correcting mistakes, combining sentences, choosing reference materials and figurative speech (similes, metaphors). The pages are reproducible and the book includes a skills list and answer keys.

Big Lies in a Small Town Hachette UK

A heartfelt account of poverty in Ireland and emigration to America. -- back cover.

The House of Rust East African Publishers

Fluid Mechanics, Second Edition deals with fluid mechanics, that is, the theory of the motion of liquids and gases. Topics covered range from ideal fluids and viscous fluids to turbulence, boundary layers, thermal conduction, and diffusion. Surface phenomena, sound, and shock waves are also discussed, along with gas flow, combustion, superfluids, and relativistic fluid dynamics. This book is comprised of 16 chapters and begins with an overview of the fundamental equations of fluid dynamics, including Euler's equation and Bernoulli's equation. The reader is then introduced to the equations of motion of a viscous fluid; energy dissipation in an incompressible fluid; damping of gravity waves; and the mechanism whereby turbulence occurs. The following chapters explore the laminar boundary layer; thermal conduction in fluids; dynamics of diffusion of a mixture of fluids; and the phenomena that occur near the surface separating two continuous media. The energy and momentum of sound waves; the direction of variation of quantities in a shock wave; one- and two-dimensional gas flow; and the intersection of surfaces of discontinuity are also also considered. This monograph will be of interest to theoretical physicists.
