Title

ESSENTIAL PURCHASE for 2011! "This atlas uses high quality photographs and well written, brief synopses to cover an enormous amount of information about skin diseases in one book....This atlas combines over 900 color photographs with succinct descriptions of skin diseases and systemic diseases with skin manifestations to create the most useful single reference in

the field. This is the one book I would recommend to a non-dermatologist learning or practicing medicine in any field in any country. For dermatologists, as well, it is useful as a quick and easy reference guide. 3 Stars."-- Doody's Review Service Covering the full range of conditions, from rashes, to skin lesions and disorders of the hair, nail, and mucosa,

Fitzpatrick's is a unique combination of text, clinical reference, and color atlas-one that gives you the best quality and most varied photographs of skin disorders available anywhere. The book features a consistent format featuring key facts pertaining to epidemiology, clinical manifestations, physical exam, diagnosis, and treatment, each paired with several clear photographs

to show how the condition appears-plus boxed overviews of each disease category with severity-specific icons. FEATURES 1500 high-quality full-color images Greater emphasis on depicting conditions and disorders across a wide range of skin types Up-to-the-minute coverage of important new topics: -- Pitryiasis rubra pilaris -- Palmoplantar keratosis -- Nevus lipomatosus superficialis --

Acquired digital fibromatosis -- Skin signs of renal insufficiency -- Skin reactions in organ transplantatio n -- New therapeutic recommendati ons, including biologic agents for eczema and dermatitis; new regulations for retinoids; and herbal products 5 Books in 1 Knopf Books for Young Readers MIE 2002 is the XVIIth international conference of the European Federation of

Medical Informatics. Today, mankind builds up the information society, enabled by the underlying rapid development in computer technology. The significance of the spread of the internet is comparable to the significance of Gutenberg's invention. On one hand it both helps dissemination of data and knowledge and sharing of ideas. On the other hand the achievements

may divide the society, as did non-literacy deprive many people from knowledge throughout centuries. Today millions of people are isolated from an incredibly large amount of information because of "computer non-literacy," and a new elite mastering the information society has appeared. However, the ease of production and dissemination of information may foster thoughtless

communication, and has led to a flood of information and disinformation. We have to learn how to behave in this new situation, in which the dissemination of information - at an international level - is totally uncontrolled. In the area of medical or health informatics these questions are more serious. Lack of information, false or inadequate information, as well as improper

interpretation of accurate information may seriously harm patients. And the process may go out of control of the physician, i.e. patients can "treat" themselves just by visiting some health sites on the net. Everybody may throw a message in a bottle in information flood, and everybody may pick up messages at any time. Can we do anything to ensure that all messages are valid? Can we

guarantee that our messages reach the intended audience? Can we secure that content has not changed on its way? Do we know that people getting our messages will interpret them correctly? Are we able to understand the intention of a sender, when we get a message totally out of context? These questions build up the framework of MIE2002.
