** Contents available at <http://ijm.cgpublisher.com/product/pub.28/prod.1276> **The International Journal of Knowledge, Culture and Change Management examines the nature of the organisation in all its forms and manifestations: businesses, from micro-enterprises to multinational corporations; institutions of formal learning, from pre-schools to universities; public sector agencies; and non-government and community sector organisations. Its concern also extends beyond the boundaries of organisations to consider the dynamics of supply chains, organisational alliances, networks, communities of practice and capacity building. Across all of these contexts, a pragmatic focus persists to examine the 'organisation' and 'management' of groups of people collaborating to productive ends, and to analyse what makes for success and sustainability. The focus of the journal is on those intangible drivers which determine not only the livability of organisations for insiders, and their credibility and attraction to outsiders; but also their tangible results in the form of efficiency, effectiveness and productivity. The intangibles of knowledge, culture and change management do not appear on balance sheets, but ultimately do have an enormous impact on 'bottom lines'. The journal attempts to address dynamics of knowledge, culture and change as they manifest themselves in organisations. The perspectives range from big picture analyses to detailed case studies which speak to the tangible value of organisational intangibles. They traverse a broad terrain, from theory and analysis to practical strategies. The journal is relevant for academics in the fields of management, social sciences and education/training, research students, knowledge managers, trainers, industry consultants and knowledge management and change practitioners - anyone with an interest in, and concern for, cultural change in organisations. The International Journal of Knowledge, Culture and Change Management is peer-reviewed, supported by rigorous processes of criterion-referenced article ranking and qualitative commentary, ensuring that only intellectual work of the greatest substance and highest significance is published.

The relevance of translation has never been greater. The challenges of the 21st century are truly global and societies are required to manage diversities like never before. Cultural and linguistic diversities cut across ideological systems, those carefully crafted to uphold prevailing hierarchies of power, making asymmetries inescapable. Translation and interpreting studies have left behind neutrality and have put forward challenging new approaches that provide a starting point for researching translation as a cultural and historical product in a global and asymmetrical world. This book addresses issues arising from the power vested in and arrogated by translation and interpreting either as instruments of change, or as tools to sustain dominant structures. It presents new perspectives and cutting-edge research findings on how asymmetries are fashioned, woven, upheld, experienced, confronted, resisted, and rewritten through and in translation. This volume is useful for scholars looking for tools to raise awareness as to the challenges posed by the pervasiveness of power relations in mediated communication. It will further help practitioners understand how asymmetries shape their experiences when translating and interpreting.

This book establishes constructivist, interpretivist, and linguistic approaches based on conventions about the nature of qualitative and text data, the author's influence on text interpretation, and the validity checks used to justify text interpretations. Vast quantities of text and qualitative data in organizations often go unexplored. Text analytics outlined in this book allow readers to understand the process of converting unstructured text data into meaningful data for analysis in order to measure employee opinions, feedback, and reviews through sentiment analysis to support fact-based decision making. The methods involve using NVivo and RapidMiner software to perform lexical analysis, categorization, clustering, pattern recognition, tagging, annotation, memo creation, information extraction, association analysis, and visualization. The methodological approach in the book uses innovation theory as a sensitizing concept to lay the foundation for the analysis of research data, suggesting approaches for empirical exploration of organizational learning, knowledge management, and innovation practices amongst geographically dispersed individuals and team members. Based on data obtained from a private educational organization that has offices dispersed across Asia through focus group discussions and interviews on these topics, the author highlights the need for integrating organizational learning, knowledge management, and innovation to improve organizational performance, exploring perspectives on collective relationships and networks, organizational characteristics and structures, and tacit and overt values which influence such innovation initiatives. In the process, the author puts forward a new theory which is built on

three themes: relationship and networks, knowledge sharing mechanisms, and the role of social cognitive schema that facilitate emergent learning, knowledge management, and innovation.
