What is the probability of
the occurrence of a
number that is odd or less
than 5 when a fair die is
rolled. Solution. Let the
event of the occurrence of
a number that is odd be
‘A’ and the event of the
occurrence of a number
that is less than 5 be ‘B’.
We need to find $P(A \text{ or } B)$

 This Collection of problems in probability theory is primarily intended for university students in physics and mathematics departments. Its goal is to help the student of probability theory to master the theory more profoundly and to acquaint him with the application of probability theory methods to the solution of practical problems.
