City Competitiveness and Improving Urban Subsystems: Technologies and Applications Routledge

Business travel has become indispensable to the global economy, not only due to its necessity in the maintaining of corporate networks, but also because of the associated economies that cater to the daily requirements of the business

traveller. Underlying these developments are concerns over the environmental impact of increasing air travel, which are likely to generate new challenges for the future of business travel. From a team of international experts comes this analysis of the role, nature and effects of modern business travel. Issues addressed include the relationships between airlines and business travellers, the role of mobility in business, and the opportunities and challenges created by mobile workforces. The study combines theoretical advances with comprehensive analysis, and will

provoke debate across the social sciences on the nature, organization and space of work in the twenty-first century.

Innovating in Urban Economies SAGE Publications

'This volume is an important step in furthering the discussion about how cluster strategies work and the implications for theory and policy.' - Jennifer Clark, Review of Regional Studies
The role of innovations and clusters has increasingly dominated local and regional development policies in recent decades. This authoritative and accessible

Handbook considers important aspects of high-tech clusters, analyses insightful cluster case studies, and provides a number of recommendations for cluster policies. The chapters in this Handbook are written by international experts in the field and present evidence of the scope, effects, and potential of clusters as concentrations of innovative activities. The authors emphasize that cluster development is not the only option for local and regional development and argue that for cluster policies to be worthwhile, supporting policies in fields such as education, R&D, transportation, and communication infrastructure must accompany most cluster policies. Furthermore, several contributions stress that clusters often develop along a life cycle that may end with decline and even the disappearance of clusters. Consequently, this Handbook provides the basis for improving both research on innovation and clusters and the formulation and implementation of cluster policies. Furnishing the reader with rich, comprehensive discussion of innovations and clusters, this Handbook will be an essential source for researchers and

academics in the field, as well as policymakers, planners and specialists, development experts and agencies, and consultants.

Buzz IGI Global

By bringing together leading theorists and practitioners, this book provides the first comprehensive overview of local economic development theories for over 15 years. It explores the theory behind the key concepts that every economic practitioner must understand. *Knowledge Transfers over Geographical Distance in Organisations* Springer Consisting of presented papers from the 15th International Conference on Urban Regeneration and Sustainability, the included works address various aspects of the urban environment and provide solutions leading towards sustainability. Urban areas result in a series of environmental challenges varying from the consumption of natural resources and the subsequent generation of waste and pollution, contributing to the development of social and economic imbalances. As cities continue to grow all over the world, these problems tend to become more acute and require the development of new

solutions. The challenge of planning sustainable contemporary cities lies in considering the dynamics of urban systems, exchange of energy and matter, and the function and maintenance of ordered structures directly or indirectly supplied and maintained by natural systems. The task of researchers is to improve the capacity to manage human activities, pursuing welfare and prosperity in the urban environment. Any investigation or planning on a city ought to consider the relationships between the parts and their connections with the living world. The dynamics of its networks (flows of energy matter, people, goods, information and other resources) are fundamental for an understanding of the evolving nature of today's cities. Large cities represent a fertile ground for architects, engineers, city planners, social and political scientists, and other professionals able to conceive new ideas and time them according to technological advances and human requirements. Coastal areas and coastal cities are an important area covered in this volume as they have some specific features. Their strategic location facilitates transportation

and the development of related activities, but this requires the existence of large ports, with the corresponding increase in maritime and road traffic and all its inherent negative effects. This requires the development of well-planned and managed urban environments, not only for reasons of efficiency and economics but also to avoid inflicting environmental degradation that causes the deterioration of natural resources, quality of life and human health. These research papers put a focus on sustainability across the multidisciplinary components of urban planning, the challenges presented by the increasing size of cities, the number of resources required and the complexity of modern society.

Manufacturing Outsourcing Springer

The rapid evolution of Charlotte, North Carolina, from “regional backwater” to globally ascendant city provides stark contrasts of then and now. Once a regional manufacturing and textile center, Charlotte stands today as one of the nation's premier banking and financial cores with interests reaching broadly into global markets. Once defined by its biracial and bicultural character, Charlotte

is now an emerging immigrant gateway drawing newcomers from Latin America and across the globe. Once derided for its sleepy, nine-to-five “uptown,” Charlotte's center city has been wholly transformed by residential gentrification, corporate headquarters construction, and amenity-based redevelopment. And yet, despite its rapid transformation, Charlotte remains distinctively southern—globalizing, not yet global. This book brings together an interdisciplinary team of leading scholars and local experts to examine Charlotte from multiple angles. Their topics include the banking industry, gentrification, boosterism, architecture, city planning, transit, public schools, NASCAR, and the African American and Latino communities. United in the conviction that the experience of this Sunbelt city—center of the nation's fifth-largest metropolitan area—offers new insight into today's most pressing urban and suburban issues, the contributors to *Charlotte, NC: The Global Evolution of a New South City* ask what happens when the external forces of globalization combine with a city's internal dynamics to reshape the local structures, landscapes, and identities of a southern

place.

The International Encyclopedia of Geography Ashgate Publishing, Ltd.

Over the last decade, there has been an increasing amount of research on knowledge-intensive business services (KIBS) and innovation. This book brings together current thinking on this subject from geographic and territorial perspectives. Researchers from across Europe and North America present contributions from a wide range of disciplinary approaches including management studies, innovation studies and geography. They explore areas such as innovation related cooperation between KIBS firms and their industrial partners, how KIBS firms mediate business knowledge and the impact that KIBS make in local, regional and international contexts. The book offers a timely exploration of the role played by the geographic and institutional environment in the processes that link KIBS, innovation and territory across different contexts. *The Moving Image as Public Art* Routledge Why do some cities grow economically while others decline? Why do some show sustained economic performance while

others cycle up and down? In *Keys to the City*, Michael Storper, one of the world's leading economic geographers, looks at why we should consider economic development issues within a regional context--at the level of the city-region--and why city economies develop unequally. Storper identifies four contexts that shape urban economic development: economic, institutional, innovational and interactional, and political. The book explores how these contexts operate and how they interact, leading to developmental success in some regions and failure in others. Demonstrating that the global economy is increasingly driven by its major cities, the keys to the city are the keys to global development. In his conclusion, Storper specifies eight rules of economic development targeted at policymakers. *Keys to the City* explains why economists, sociologists, and political scientists should take geography seriously. [How Pension Funds, Sovereign Funds, and Endowments are Changing the Business of Investment Management and Long-Term Investing](#) University of Georgia Press

How are firms, networks of firms, and production systems organized and how

does this organization vary from place to place? This book synthesizes theories from across the social sciences with empirical research and case studies in order to answer this question.

Handbook of Proximity Relations Springer Nature

This book focuses on the application of newly innovated analytical tools for sustainable development on regional economic and environmental issues in Korea. With a range of case studies, the authors explore a series of theoretical models and empirical methods including spatial CCE Model, multiregional Input-Output and econometric analysis, logit model, contingent valuation method, GIS, sample selection model, machine learning technique, stochastic frontier analysis, and panel analysis. These models and methods are tailored to spatial development issues such as agglomeration, clustering and industrial innovation, human capital and labor market, education and R&D investments and economic resilience for regional economies and unexpected disaster, and natural resources for environmental markets. Quantitative Regional Economic and Environmental

Analysis for Sustainability in Korea is of particular interest to policy makers and practitioners, as well as research scholars active in sustainability science.

Sidewalk Spectators and Modes of Enchantment Springer Science & Business Media

A critical cultural materialist introduction to the study of global entertainment media. In *Global Entertainment Media*, Tanner Mirrlees undertakes an analysis of the ownership, production, distribution, marketing, exhibition and consumption of global films and television shows, with an eye to political economy and cultural studies. Among other topics, Mirrlees examines: Paradigms of global entertainment media such as cultural imperialism and cultural globalization. The business of entertainment media: the structure of capitalist culture/creative industries (financers, producers, distributors and exhibitors) and trends in the global political economy of entertainment media. The "governance" of global entertainment media: state and inter-state media and cultural policies and regulations that govern the production, distribution and exhibition of

entertainment media and enable or impede its cross-border flow. The new international division of cultural labor (NICL): the cross-border production of entertainment by cultural workers in asymmetrically interdependent media capitals, and economic and cultural concerns surrounding runaway productions and co-productions. The economic motivations and textual design features of globally popular entertainment forms such as blockbuster event films, TV formats, glocalised lifestyle brands and synergistic media. The cross-cultural reception and effects of TV shows and films. The World Wide Web, digitization and convergence culture.

The Sustainable City XV SUNY Press

Taking the case of the Norwegian petroleum industry as its vantage point, the book discusses the question of industrial transformations in resource-based industries. The book presents new, empirically-based analyses of the development of the petroleum industry, with an emphasis on three ongoing transformation processes: Technological upgrading and innovation in upstream petroleum. Globalisation of the petroleum

industry and suppliers' experiences of entering foreign markets. Diversification into and out of petroleum - and the potential for new growth paths after oil. Drawing together a range of key thinkers in this field, this volume addresses the ways in which the petroleum industry and its supply industry has changed since the turn of the millennium. It provides recommendations for the development of resource economies in general and petroleum economies in particular. This book will be of great interest to students and scholars of energy policy and economics, natural resource management, innovation studies and the politics of the oil and gas sector.

Between Cultural Imperialism and Cultural Globalization Edward Elgar Publishing

Modern innovation processes are to large extent geographically distributed, where knowledge flows are more likely to be global, and activities such as Research and Development and production can take place at a variety of locations around the world. Hence, geographical distances will 'or have perhaps already - become less significant in today' s society where knowledge generated in various parts of

the world may be readily accessed.

Simultaneously, there are strong spatial dimensions to knowledge generation and diffusion, as well as...

Clusters, Networks, and Innovation

University of Toronto Press

The acquisition and management of information is central to the operation and marketing of many service-providing firms and other organizations. Their varied knowledge requirements influence approaches to organizational structure, relationships to other organizations, the location of operations, and entry into new markets. In this book, an international and interdisciplinary team of leading scholars examines the attributes of knowledge acquisition and diffusion within and across service-providing organizations. Using a variety of case examples, they pay particular attention to the processes of internationalization and the ways in which service-providing organizations affect regional economic development.

Geographies of Knowing and Learning

Routledge

Archaeologists, anthropologists, and classicists discuss how urbanization first emerged in strikingly different

sociopolitical contexts in North America, Europe, and the Near East. The pursuit for universally applicable definitions of the terms “urban” and “city” has frequently distracted scholars from scrutinizing processes of how ancient nucleated settlements evolved and developed. Based on the premise that similar social dynamics to a great extent governed nucleation trajectories throughout human history, *Coming Together* focuses on both prehistoric aggregated and early urban settlements. Drawing from a variety of theoretical and methodological approaches, archaeologists, anthropologists, and classicists discuss how nucleation unfolded in strikingly different sociopolitical contexts in North America, Europe, and the Near East. The major themes of the volume are nucleation’s origins, pathways to sustainability, and the transformative role of these sites in sociopolitical and cultural change.

Songs from Sweden Edward Elgar Publishing

'Communities of practice', like 'social capital' and 'networks', is an idea that has been widely adopted in the social

sciences, particularly in discussion of innovation and creativity. This book evaluates the concept and its uses, and will be an essential guide for students and researchers.

[Handbook of Research on Innovation and Clusters](#) Routledge

Governments and regional authorities often express the belief that the key to prosperity and economic expansion is related to the ability of countries to sustain regional clusters of competitiveness and innovation. The book reviews the most important conceptual approaches to the analysis of the emergence, growth and evolution of clusters of innovation. Drawing from the different experiences of industrial districts and high-tech regions such as Silicon Valley, Boston's biotech region, and Hsinchu-Taipei, the contributions in this book offer a broad interpretative framework and policy implications for the creation and strengthening of competitive clusters. Themes include: · the wide variety of existing clusters and the diversity in their emergence and growth; · the international mobility of factors and demand linkages; · the role of different

network types and the social setting; · the accumulation of capabilities in key large actors and the importance of spinoffs and new firm formation; · the role of different learning regimes and sectoral specificities; · the importance of social networks, labour mobility, and face-to-face contacts as vehicles of knowledge spillovers. Broad implications are drawn for the design of policies to encourage successful economic clusters in developed and developing clusters.

[Management in South Korea Revisited](#) Routledge

"The author presents a challenging perspective on two key issues within contemporary economic and geographical debate. In his first lecture, the author reconsiders some of the foundations of comparative economics and institutionalism in an analysis of the "societal" and "communitarian" bases of social and economic development. Arguing that the interaction between society and community defines critical incentives for actors, the author suggests a context-sensitive sociological framework for the institutional analysis of economic development. The second lecture focuses

on urban economics and argues that existing models of urban concentrations are incomplete unless grounded in a more precise understanding of the most fundamental aspect of proximity, face-to-face contact." -- BACK COVER.

Cases and Policies Edward Elgar Publishing

Current corporate structures based on internationalisation and decentralisation are opposed to the nature of the most important resource: knowledge. The acquisition and exchange of (tacit) knowledge relies on interpersonal interactions and is thus time- and place-dependent. Given that the combination of heterogeneous knowledge stocks furthers innovation, organisations develop strategies to ensure the transfer of knowledge. To enable intra-organisational knowledge flows spatial mobility at the workplace affects a wide range of employees. The study examines in which ways spatially mobile employees, i.e. expatriates, contribute to those knowledge flows. The study of ego networks reveals not only social dynamics of knowledge transfer, but the geographical framework allows to discuss knowledge flows from a

spatial perspective. On the one hand, the empirical results confirm their knowledge transfer function. On the other hand, the relational geographical perspective reveals that expatriates do not represent a homogeneous group, but their roles in the knowledge transfer process, the geographical reach of their networks and their knowledge resources depend on job-, knowledge-, individual- and space-related factors.

Social Informatics Routledge

This edited collection examines the changing contours of Korean management and business, presenting recent scholarly research into this important Asian economic player. As one of the original 'Little Dragon' or 'Tiger' economies, South Korea has grown and prospered since the early years of the 1960s, and is now home to several major world-class multinational companies, such as Hyundai and LG, Samsung. In turn, it has developed a distinctive style of management, which derives from a shared Asian heritage but is nonetheless unique to South Korea. The collection covers a variety of themes,

topics and issues from a range of perspectives and fields in management and business studies. This book was originally published as a special issue of Asia Pacific Business Review.

Creative Knowledge Cities Springer

This book contains expanded versions of research papers presented at the international sessions of Annual Conference of the Japanese Society for Artificial Intelligence (JSAI), which was held online in June 2020. The JSAI annual conferences are considered key events for our organization, and the international sessions held at these conferences play a key role for the society in its efforts to share Japan's research on artificial intelligence with other countries. In recent years, AI research has proved of great interest to business people. The event draws both more and more presenters and attendees every year, including people of diverse backgrounds such as law and the social sciences, in addition to artificial intelligence. We are extremely pleased to publish this collection of papers as the research results of our international sessions.
