chapter 8 biology photosynthesis
Flashcards - Quizlet Biology Chapter 8
Test Photosynthesis Biology Chapter 8
test: Photosynthesis. moves through the
ETC from Photosystem II to Photosystem
1, original electron comes from splitting
water and then is energized by the
photon of light, allows ATP to be created
by pumping H⁺ ions, is reenergized and
then is carried by NADPH the glucose
and gives it the high energy in the
sugar. Biology Chapter 8 test:
Photosynthesis Flashcards |

Quizlet Biology Chapter 8 Photosynthesis.
STUDY. Flashcards. Learn. Write. Spell.
Test. PLAY. Match. Gravity. Created by.
latinwords. Casatelli Period 4/1 Test
Review. Terms in this set (49) What gas
do plants require to perform
photosynthesis? Carbon Dioxide. What is
the main energy carrier found in all
cells? ATP. What is the main energy
source ... Biology Chapter 8
Photosynthesis Flashcards |
Quizlet Biology Chapter 8:
Photosynthesis. 6 carbon dioxide
molecules enter through the
atmosphere, ATP and NADPH⁺ uses its
charged molecules to split them into two
groups: half will go out to become

sugars, lipids, etc. half will continue on for the next cycle. (ATP and NADPH+ return to being ADP and NADP+) The whole point of the cycle is to make sugars for the plant.
