The day-to-day responsibility for wound management is a role usually undertaken by nurses. It includes assessing the wound, selecting an appropriate treatment, and evaluating the patients' progress. In order to do this effectively the nurse needs to understand the healing process, recognize the factors which may delay wound healing, understand how wound healing can be optimized, know how to recognize complications if they arise and know how to treat them. This text, specifically written for community nurses, including practice nurses, provides a picture of wound healing for both acute and chronic wounds that may be encountered in a community setting. An overview of the function of the skin and phases of wound healing are examined prior to looking at the relationship between wound healing and the patients' health and lifestyle. The reference is written in a question-and-answer format, and includes relevant case studies.

Wound Care Lippincott Williams & Wilkins

Increasingly, wound management is recognised as a specialised area of practice. Advances in wound-care products, surgical interventions, and social-support options create an often bewildering array of knowledge for healthcare practitioners. This textbook opens with a focus on the core elements of effective wound management: an understanding of how wounds heal and what inhibits wound healing, rigorous assessment, use of outcome measures, evidence-based approaches to practice, and an understanding of how clinical research is done. Key aspects of wound-bed preparation and management - diagnostic investigations, assessment and management of non-viable tissue, infected wounds, dressings and technology, pharmacological therapy, and acute wounds - are then elucidated. Optimal management of commonly-encountered wounds (venous leg ulceration, arterial and mixed arterial-venous ulceration, inflammatory ulcers, pressure injury, and the high-risk foot) and unusual wounds is described. The path to professionalisation of wound management in Australia is charted. The book ends with a list of wound care products (types, properties, uses, distributor-contact details). The editors of and specialist contributors to this text have aimed to build on the foundations provided by the numerous basic, introductory-level textbooks in the field to provide an authoritative, comprehensive, and up-to-date textbook for wound managers who wish to further develop their knowledge and skills.
