In its new second edition, *Investigating Chemistry: A Forensic Science Perspective* remains the only book that uses the inherently fascinating topics of crime and criminal investigations as a context for teaching the fundamental chemical concepts most often covered in an introductory nonmajors course. Covering all the standard topics, Matthew Johl capitalizes on the surge of interest in the scientific investigation of crime (as sparked by CSI and other television shows), bringing together the theme of forensic science and the fundamentals of chemistry in ways that are effective and accessible for students. This edition features refined explanations of the chemical concepts, which are the core of the book, as well as a more thoroughly integrated forensic theme, updated features, and an expanded media/supplements package.

Mastery learning is an instructional approach that empowers every student to progress with confidence. Using flexible pacing and targeted supports, teachers guide students through a cyclic process of preparation, demonstration, and formative feedback until there is a mutual agreement between teacher and student that the student is ready to advance. In this book, educator Jonathan Bergmann, a pioneer of the flipped classroom movement, walks you step by step through the mastery learning cycle, explaining what it entails and providing the templates, models, and rubrics you need to start using it in your own classroom. You'll learn how to \* Set meaningful, measurable, and transferable learning objectives that target essential knowledge, skills, and dispositions. \* Develop a mastery rubric to check for student levels of proficiency. \* Create an assessment plan that ensures positive learning experiences for all. \* Plan and deliver units that incorporate both time-shifted direct instruction and collaborative application activities within the classroom space. \* Provide timely differentiated support, based on students' individual learning needs. Informed by trial and error in his own classroom and by discussions with other expert practitioners, Bergmann shares commonsense solutions to the major challenges of mastery learning implementation: everything from how to manage pacing to how to create multiple versions of tests, determine grades, and get

stakeholder buy-in. The Mastery Learning Handbook is both an introduction to this exciting instructional approach and a practical resource that K-12 teachers can turn to again and again. See for yourself just how effective, enjoyable, and transformative mastery learning can be.

As future generation information technology (FGIT) becomes specialized and fragmented, it is easy to lose sight that many topics in FGIT have common threads and, because of this, advances in one discipline may be transmitted to others. Presentation of recent results obtained in different disciplines encourages this interchange for the advancement of FGIT as a whole. Of particular interest are hybrid solutions that combine ideas taken from multiple disciplines in order to achieve something more significant than the sum of the individual parts. Through such hybrid philosophy, a new principle can be discovered, which has the propensity to propagate throughout multifaceted disciplines. FGIT 2009 was the first mega-conference that attempted to follow the above idea of hybridization in FGIT in a form of multiple events related to particular disciplines of IT, conducted by separate scientific committees, but coordinated in order to expose the most important contributions. It included the following international conferences: Advanced Software Engineering and Its Applications (ASEA), Bio-Science and Bio-Technology (BSBT), Control and Automation (CA), Database Theory and Application (DTA), Disaster Recovery and Business Continuity (DRBC; published independently), Future Generation Communication and Networking (FGCN) that was combined with Advanced Communication and Networking (ACN), Grid and Distributed Computing (GDC), Multimedia, Computer Graphics and Broadcasting (MulGraB), Security Technology (SecTech), Signal Processing, Image Processing and Pattern Recognition (SIP), and e-Service, Science and Technology (UNESST).
