The management of chronic diseases is one of

the tasks of all members of the health team, and different models need to be applied in the practice of chronic care management. One of these models is home care services. There are two main sections in this book. In the first part of the section, the concept of caregiving and care at home is explained. In the second part, the responsibilities of caregivers at home and the responsibilities of caregivers of people who have health problems that occur during different periods of life are discussed. In the second section, the problems of caregivers are also included. I would like to think that what is quoted in this book, which contains examples from different cultures of the world for home care approaches, will contribute to the development of home care services. This book is presented to all health professionals working in the field of health services as well as health politics professionals and students trained in these areas.

Caregiving and Home Care Springer
This volume offers a theoretical and practical overview of the ethics of

pediatric medicine. It serves as a fundamental handbook and resource for pediatricians, nurses, residents in training, graduate students, and practitioners of ethics and healthcare policy. Written by a team of leading experts, *Pediatric Bioethics* addresses those difficult ethical questions concerning the clinical and academic practice of pediatrics, including an approach to recognizing boundaries when confronted with issues such as end of life care, life-sustaining treatment, extreme prematurity, pharmacotherapy, and research. Thorny topics such as what constitutes best interests, personhood, or distributive justice and public health concerns such as immunization and newborn genetic screening are also addressed.

In 1994, the expert knowledge of Ram Gokal and Karl D. Nolph, the two foremost figures in the field of peritoneal dialysis, was combined to produce the first edition of the *Textbook of Peritoneal Dialysis*. The work quickly became recognised as the 'gold standard' for those

working in the field. Since its conception, however, our understanding of peritoneal dialysis related physiology, kinetics and clinical outcomes, as well as the concepts of intraperitoneal chemotherapy, has increased sufficiently to make an updated and completely revised edition of the work necessary. An expansion of the editorial team by fellow-experts Ramesh Khanna and Raymond Krediet enabled an even more comprehensive approach to be taken. This second edition reasserts the book's uniqueness in its detailed discussion of the topic, making it required reading for all those working within the field of peritoneal dialysis.

Adolescents with Chronic Kidney Disease Springer Science & Business Media
More than 400,000 people in the United States undergo kidney dialysis. If you or a member of your family are one of them, then the prospect of a regular appointment with a dialysis machine may seem like the end of life itself. But that reaction couldn't be more wrong. In *Dialysis Without Fear*, psychiatrist and dialysis patient Dr. Daniel Offer joins with his wife, Marjorie Kaiz Offer, and daughter, Susan Offer

Szafir, to reveal how life can be lived--and lived well--on dialysis. Drawing on his long medical career and more than seven years of personal experience with dialysis, Dr. Offer dispels many misconceptions surrounding this treatment, explaining how you can adapt to the new diet, travel, work and continue to partake in life's joys and celebrations. But the fears and hardships can be quite real, and Dr. Offer brings his years as a psychiatrist to bear as he provides practical advice on how patients can overcome them. Walking through each step of dialysis, he explains different types of treatment, examines the pros and cons of a transplant, and discusses side effects. Since dialysis affects the entire family, Dr. Offer and his coauthors also provide realistic insights into how relatives can cope and thrive together, sharing the humor, courage, and triumphs of real families who have successfully faced the challenges of dialysis. The result is an inspiring, practical guide that will help you and your family learn to overcome the difficulties of dialysis, live without

fear, and enjoy every day.

Critical Care Nephrology and Renal Replacement Therapy in Children

Objective: To assess the changes in LVH and LV geometry from the initiation of dialysis, during long-term dialysis and after transplantation in pediatric patients with end-stage renal disease (ESRD). Methods: This is prospective longitudinal study of 15 children with ESRD, aged 6-19 years, who had 3 consecutive echocardiograms. Each patient had his (her) first echo within the first 60 days (mean time 1.2+/-0.7 months) after starting chronic dialysis. Second study was performed at least 6 months after baseline evaluation (mean time 10.4+/-5.3 months) and most recent to renal transplantation (1.4+/-0.5 months). Third study was performed at least 1 year after successful renal transplantation (mean time 20.1+/-14.3 months). Left ventricular mass (LVM) was indexed to height 2.7 . LVH was defined as LVM index greater than the 95 th percentile for normal children. Results: The mean LVM index decreased from 47.2+/-18.5 g/m 2.7 at

start of dialysis to 46.8+/-18.7 g/m 2.7 prior to transplant and to 42.2+/-12.5 g/m 2.7 after transplantation, but these changes did not reach statistical significance (p=0.19). The prevalence of LVH increased with each measurement: 57% at the initiation of the dialysis, 64% prior to and 71% after transplantation. Changes were not statistically significant. Only 2 (14 %) patients had normal LV geometry at initial evaluation. Most common geometric patterns were eccentric and concentric LVH. There was no significant change in the prevalence of concentric LVH during the study (36%, 21%, 21% for echo 1, 2, and 3 respectively). The prevalence of eccentric LVH doubled in post-transplant patients compared to the first echocardiographic study (21%, 43%, and 50% for echo 1, 2, and 3 respectively). There was no significant difference in the interval changes of LVM index according to sex, race, cause of renal failure and duration on dialysis or after transplantation. Multivariate analysis showed that interval change in systolic blood

pressure was a significant independent predictor for interval changes of LVM index for each study period.
