Real-world scenarios help you develop clinical reasoning skills for primary care! Case Studies in Primary Care: A Day in the Office, 2nd Edition includes 50 case studies on the most commonly encountered situations in primary care. Demonstrating the kinds of health problems that a Nurse Practitioner or Physician Assistant might see during a typical clinical day, case studies cover patients from various cultures and all ages. You're asked to analyze data and think critically in reaching accurate diagnoses and planning effective treatment; you can then submit your responses online for grading and instant feedback. Real-world scenarios offer the opportunity to analyze clinical situations likely to be encountered in today's primary care settings, providing practice in clinical reasoning skills. Day in the Office format presents cases hour by hour, in the way a typical clinical day might unfold. Emphasis on problem-based learning helps you to think critically and analyze clinical situations — such as ear infections, diarrhea, and coughing and fever — in order to provide appropriate primary care. Six NEW cases are included (for a total of 50), with three focusing on older clients with more complex health challenges, one addressing unplanned pregnancy, and two addressing practice management issues. NEW! Emphasis on follow-up care addresses patients coming to the primary care setting from retail clinics, rehabilitation settings, or acute-care settings, and underscores the importance of interprofessional collaboration. NEW! Enhanced patient diversity includes cases for all age groups, and reflects a more contemporary appreciation of cultural diversity and gender/gender identity. NEW! Updates to all cases ensure that case studies and feedback are consistent with the latest research evidence, clinical practice guidelines, and national and international treatment standards. NEW! Online answer submission allows you to write Assessment and Plan answers in the printed book, then submit answers online for grading and feedback. NEW! Grading rubrics are provided on the companion Evolve website to help you develop your answers. NEW! Introduction explains how to get the most out of the book.

Chinese internal medicine is the foundation of clinical practice of Chinese medicine and covers a large variety of diseases and symptoms. Developing expertise in every internal disease requires a lot of practice and extensive studies. However, after mastering the theory of Chinese medicine and classical understanding of the etiology and pathomechanism of diseases, the practitioner must acquire many years of clinical practice. One could spend years accumulating firsthand experience. However, since there is ample information collected from successful cases studies available to us, it is highly profitable for the practitioner to analyze and grasp the knowledge through the experience of the masters that came before them. In this approach, medicine itself will continue to evolve and improve. This collection of internal medicine clinical cases contains clear and detailed analysis of commonly seen diseases such as diabetes, Parkinson's Disease, post stroke sequelae, insomnia, epilepsy, bipolar disorder, emaciation, rheumatoid arthritis and many more. These medical cases are

concrete and filled with medical knowledge from experts on the theory, treatment principles and methods with medicinals, formulas, acupuncture and moxibustion. In addition, to deepen the level of understanding of the diseases, comprehension questions have been added at the end of each chapter with detailed answers. This clinical case study collection is a most for all practitioners of Chinese medicine.
