Managerial cost accounting is the financial and managerial tool that is used to estimate the organizational cost of products and services in business and government. In recent decades, cost accounting in the United States and other advanced industrial countries has been dominated by discussions of Activity Based Costing or ABC. While ABC can be shown to produce a more accurate estimate of cost than older and more basic types of cost accounting, ABC is not used extensively in many governments. We argue that this recent focus on ABC has stifled examination and discussion of how government cost accounting is being used and how it could be used in practice. The study of cost accounting practice reveals

an important and underexplored area of financial management in government. Given the scandals that cost accounting estimates can create and that different types of cost accounting can create different estimates of cost it may be reasonable to ask whether the cost accounting exercise is worth it? *Cost Accounting in Government: Theory and Applications* addresses these unusual and unusually important topics through a series of studies of different government cost accounting practices. The first section of the book presents two chapters on the history and basic elements of cost accounting. The second section of the book provides further discussion and case studies of actual cost accounting practices in the main areas that cost accounting has been used in government: benchmarking the performance of government services, rate setting, grant overhead cost recovery, and cost management. The last two chapters discuss cost accounting practices in Europe and the future of cost accounting. These cases span local and federal governments and provide a much needed context to the study of cost accounting in government. Aimed at

academics, researchers and policy makers in the fields of Accounting, Public Administration, and Government Studies, *Cost Accounting in Government: Theory and Applications* seeks to address the practical and theoretical gap in government cost accounting research with case studies of different public agencies that are using cost accounting for different purposes. The case studies illustrate that different purposes for cost accounting create unique and interesting cost accounting practices. The case studies provide useful examples of actual cost accounting systems that can inform both research and instruction

Management and cost accounting has been the basic toolbox in business administration for decades. Today it is an integral part of all curricula in business education and no student can afford not to be familiar with its basic concepts and instruments. At the same time, business in general, and management accounting in particular, is becoming more and more international. English clearly has evolved

as the "lingua franca" of international business. Academics, students as well as practitioners exchange their views and ideas, discuss concepts and communicate with each other in English. This is certainly also true for cost accounting and management accounting. Management Accounting is becoming increasingly international. "Management and Cost Accounting" is a new English language textbook covering concepts and instruments of cost and management accounting at an introductory level (Bachelor, but also suited for MBA courses due to strong focus on practical applications and cases). This textbook covers all topics that are relevant in management accounting in business organizations and that are typically covered in German and Central European Bachelor classes on cost accounting and management accounting. After an introduction to the topic, including major differences between the German approach and the purely Anglo-Saxon approach of management accounting, the book describes different cost terms and concepts applied in German cost accounting, The book is much more

specific here compared to US-American standard textbooks. Based on different cost concepts, the topic of cost behavior is discussed, including the determination of cost functions. The heart of the book guides the reader through the general structure of a fully developed cost accounting system following the German and Central European standard: It starts with cost type accounting, moves on to cost center accounting and finally deals with cost unit accounting, assigning cost to goods and services offered in the market. The remaining parts of the book deal with decision making and how management and cost accounting data can support managers in this task. A comparison of absorption costing and variable costing introduces the reader to management decisions such as product portfolio and outsourcing decisions. Additionally, cost-volume-profit analysis (break-even-analysis) is covered. The book closes with a comprehensive treatment of cost planning and variance analysis.
