This is where all the energy produced by the wind turbines is brought together and converted by transformers to a high voltage transmission of 155kV. This is necessary to ensure that as little energy as possible is lost during transmission over long distances to the next onshore grid node.

Operation and maintenance for offshore substationsOur customers for substation safety equipment regularly pose questions relating to safety protection during substation operation and maintenance. There are a number of hazards unique to substations.

Rules to Follow For Substation SafetyOperation & Maintenance In addition to designing, supplying, installing and testing & commissioning your substation apparatus, IUS can Operate and Maintain your High Voltage (HV) system. As defined in the Electricity at Work Act 1989, there is a requirement for HV network owners to maintain electrical equipment in a safe condition.
